# **Glossary**

**Community Forum** - Community Forums were established to create a two way communication process with representatives of local communities, establish and build relationships, provide timely updates on the designs and plans, whilst listening to the issues and concerns raised by members of the community. Membership of the Community Forums comprised of two representatives from local resident and community associations, all disability groups or special interest groups, business organisations and public representatives along each scheme.

**Signal-controlled Bus Priority** – Signal-Controlled Priority uses traffic signals to enable buses to get priority ahead of other traffic on single lane road sections, but it is only effective for short distances. This typically arises where the bus lane cannot continue due to obstructions on the roadway. An example might be where a road has pinch-points where it narrows due to existing buildings or structures that cannot be demolished to widen the road to make space for a bus lane. It works through the use of traffic signal controls (typically at junctions) where the bus lane and general traffic lane must merge ahead and share the road space for a short distance until the bus lane recommences downstream. The general traffic will be stopped at the signal to allow the bus pass through the narrow section first and when the bus has passed, the general traffic will then be allowed through the lights.

**Bus Gate** - A Bus Gate is a sign-posted short length of stand-alone bus lane. This short length of road is restricted exclusively to buses, taxis, and cyclists plus emergency vehicles. It facilitates bus priority by removing general through-traffic along the overall road where the bus gate is located. General traffic will be directed by signage to divert away to other roads before they arrive at the Bus Gate.

**Cycle Lane** - A cycle lane is a lane on the carriageway that is reserved either exclusively or primarily for cycling and is separated from general traffic or bus lanes by road markings.

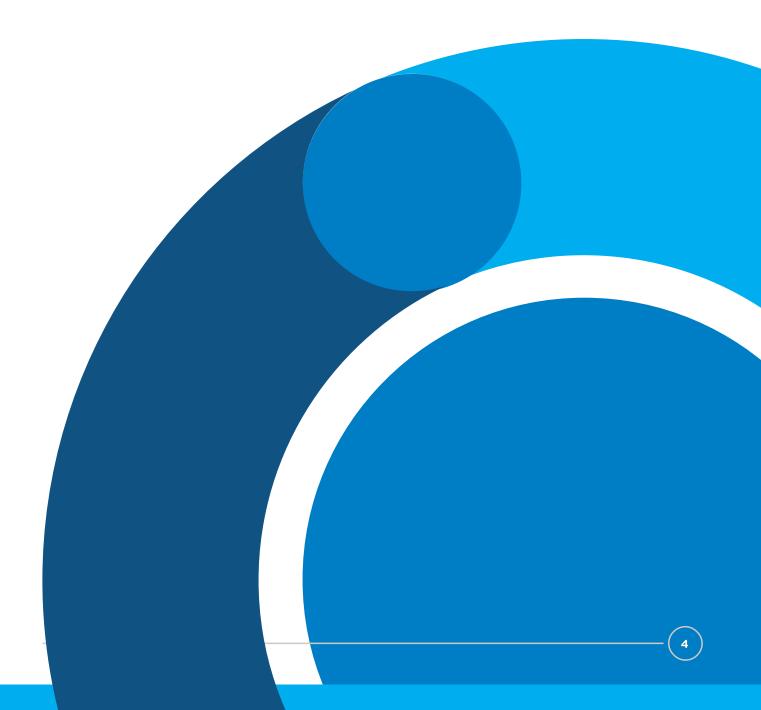

**Cycle Track** - A cycle track is a separate section of the road dedicated for cycling only. This space will generally be isolated from other vehicular traffic by a physical kerb.

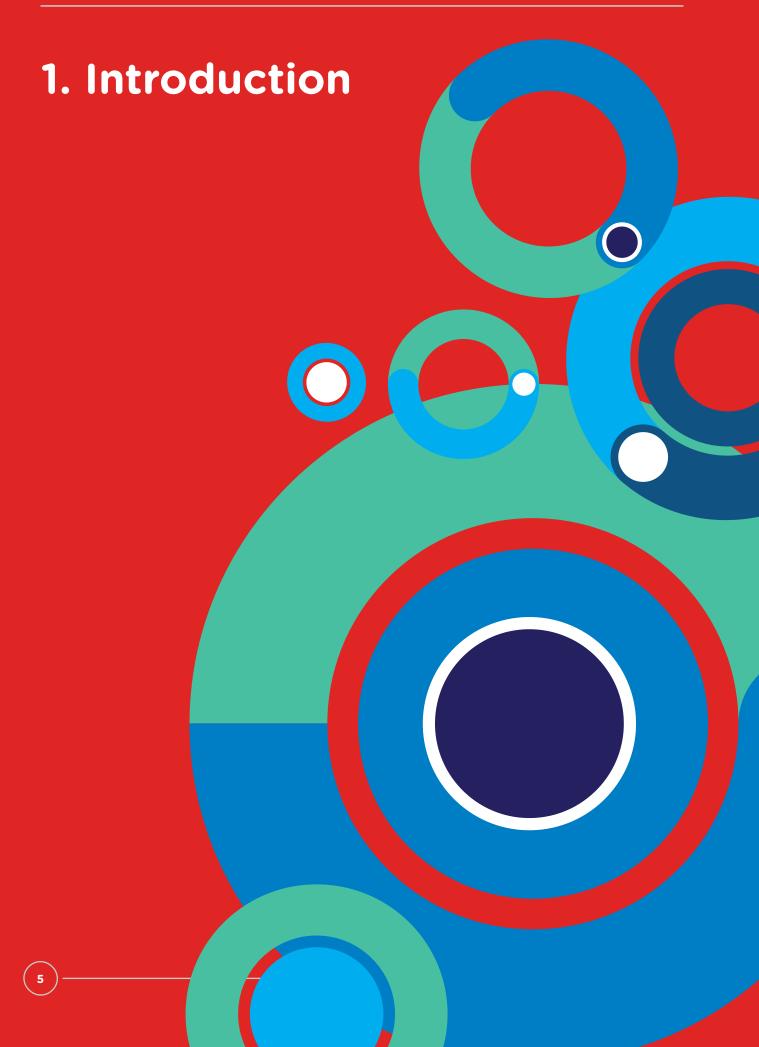

**Virtual Bus Priority** - This refers to cases where physical bus priority (i.e. bus lanes) is not provided, and instead, bus priority is provided within the general traffic lane through the use of signal-controlled priority or bus gates to control the movements of general traffic.

**Protected Junctions** - Refers to junctions, which provide physical kerb buildouts to protect cyclists through the junction. Due to the inherently complex nature of mixed mode movements at junctions, the provision for cyclists at junctions is a critical factor in managing conflict and providing safe junctions for all road users. As such, this is the preferred layout for signalised junctions as part of the CBC Infrastructure Works.

**Greenway** - A greenway is a recreational corridor for non-motorised journeys, developed in an integrated manner which enhances both the environment and quality of life of the surrounding area. These routes should meet satisfactory standards of width, gradient and surface condition to ensure that they are both user-friendly and low risk for users of all abilities.

**Carbon** - The term Carbon is used to refer to carbon emissions or Green House Gas Emissions interchangeably

### 1.1 Report Objectives

The main objective of this report is to outline the extensive public consultation and stakeholder engagement undertaken for the Tallaght/Clondalkin to City Centre Core Bus Corridor Scheme (herein after called the Proposed Scheme), which is one of the schemes of the BusConnects Dublin Core Bus Corridors Infrastructure Works (herein after called the CBC Infrastructure Works).

The Proposed Scheme is one of twelve stand-alone Core Bus Corridor (CBC) schemes to be delivered under the **BusConnects Dublin - Core Bus Corridors Infrastructure Works**. The CBC Infrastructure Works, once completed, will deliver the radial core corridors identified in the Greater Dublin Transport Strategy Area 2016-2035 (herein after called the GDA Transport Strategy).

The BusConnects Dublin Programme is the National Transport Authority's (NTA) programme to greatly improve bus services in the Greater Dublin Area and the CBC Infrastructure Works is one element of that Programme, itself containing 12 stand-alone Proposed Schemes. It is a key part of the Government's polices to improve public transport and to contribute to addressing climate change in Dublin and other cities.

The NTA established a dedicated BusConnects Infrastructure team to advance the planning and construction of the CBC Infrastructure Works. It comprises an in-house team including technical and communications resources and external service providers procured from time-to-time to assist the internal team in the planning and design of the 12 Proposed Schemes.

The CBC Infrastructure Works will deliver a major component of the overall Core Bus Routes as identified in the GDA Transport Strategy, encompassing the delivery of approximately 230km of dedicated bus lanes and 200kms of cycle tracks along 12 stand-alone Core Bus Corridors Proposed Schemes. In addition, the programme of works is also a critical element of the National Development Plan 2018 – 2027, the National Development Plan 2018-2027, National Development Plan 2021-2030, Climate Action Plan 2019, Climate Action Plan 2023.

The 12 stand-alone Core Bus Corridor Schemes to be delivered under the CBC Infrastructure Works are:

- The Clongriffin to City Centre Core Bus Corridor Proposed Scheme;
- The Swords to City Centre Core Bus Corridor Proposed Scheme;
- The Ballymun / Finglas to City Centre Core Bus Corridor Proposed Scheme;

- The Blanchardstown to City Centre Core Bus Corridor Proposed Scheme;
- The Lucan to City Centre Core Bus Corridor Proposed Scheme;
- The Liffey Valley to City Centre Core Bus Corridor Proposed Scheme;
- The Tallaght / Clondalkin to City Centre Core Bus Corridor Proposed Scheme;
- The Kimmage to City Centre Core Bus Corridor Proposed Scheme;
- The Templeogue / Rathfarnham to City Centre Core Bus Corridor Proposed Scheme;
- The Bray to City Centre Core Bus Corridor Proposed Scheme;
- The Belfield / Blackrock to City Centre Core Bus Corridor Proposed Scheme; and
- The Ringsend to City Centre Core Bus Corridor Proposed Scheme.

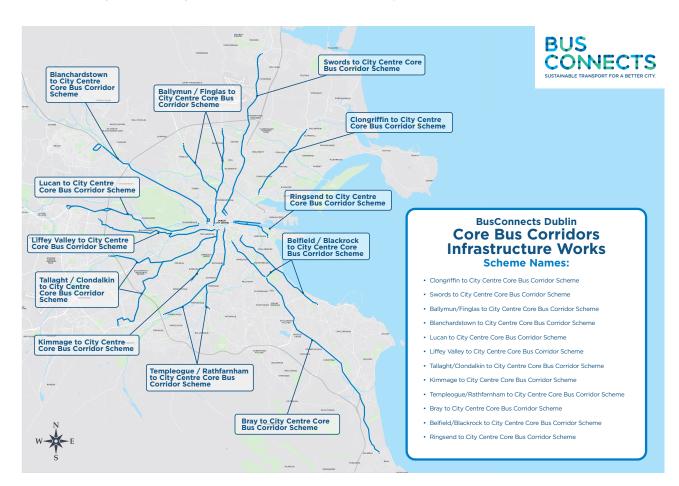

Figure 1.1 - 12 Scheme Map

### 1.2 Proposed Scheme Overview

The Proposed Scheme consists of two sections, namely:

- 10 The Tallaght to City Centre Section (previously Greenhills to City Centre Core Bus Corridor) and
- The Clondalkin to Drimnagh Section (previously Clondalkin to City Centre Core Bus Corridor)

During the Non-Statutory public consultations and route selection process (up to the choice of the PRO) these two sections had been considered separately. These sections have now been combined as the Proposed Scheme. The principal reasons for combining the Tallaght to City Centre section and Clondalkin to Drimnagh section into the Proposed Scheme include their geographical association and functional interdependence and the fact that the Clondalkin to Drimnagh Section joins the Tallaght to City Centre Section at the junction of R110 Long Mile Road/Drimnagh Road and R819 Walkinstown Road.

The Proposed Scheme which has a total length of approximately 15.5km is comprised of two main alignments in terms of the route it follows; namely the Tallaght to City Centre section and the Clondalkin to Drimnagh section.

The Tallaght to City Centre section begins at the junction of Blessington Road / Cookstown Way and is routed along Belgard Square West, Belgard Square North, Belgard Square East and Blessington Road to the junction of R819 Greenhills Road and Bancroft Park. From here the Proposed Scheme is routed along the R819 Greenhills Road to Walkinstown Roundabout via new transport link roads; in the green area to the east of Birchview Avenue / Treepark Road, in the green area to the south of Ballymount Avenue and in the green area to the east of Calmount Road. From Walkinstown Roundabout the Proposed Scheme is routed along the R819 Walkinstown Road to the junction with R110 Long Mile Road and Drimnagh Road. The shared spine with the Clondalkin to Drimnagh section commences at this junction and the Proposed Scheme is routed along the R110 to the junction of Dean Street and Patrick Street via Drimnagh Road, Crumlin Road, Dolphins Barn, Cork Street, St. Luke's Avenue and Dean Street. From here the Proposed Scheme is routed along the R137 via Patrick Street to the junction at Winetavern Street and Christchurch Place where the Proposed Scheme terminates within the City Centre.

The Clondalkin to Drimnagh section begins at the junction of New Nangor Road and Woodford Walk and is routed along the R134 New Nangor Road, R810 Naas Road, R112 Walkinstown Avenue and the R110 Long Mile Road to the junction of Walkinstown Road and Drimnagh Road where it is routed towards the City Centre along the shared spine section as described above.

In addition to the primary corridor, an alternative cycle route of approximately 3.9km in length is proposed along Bunting Road, St. Mary's Road, Kildare Road and Clogher Road to link into the Grand Canal cycle route at Parnell Road. Please see Figure 1.2.

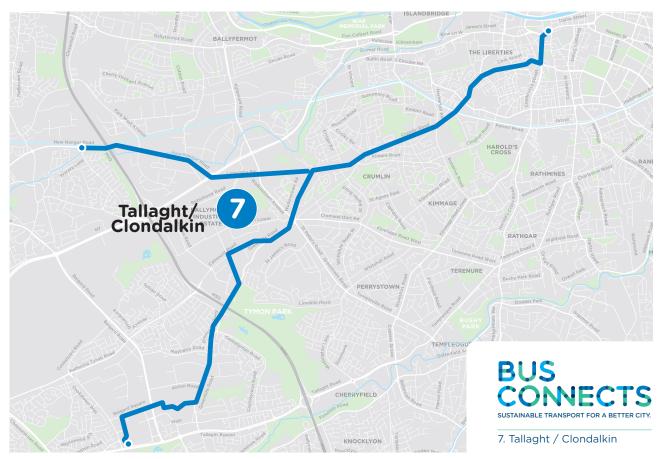

Figure 1.2: Route of the Proposed Scheme

## 1.3 Report Components

This report has two key components – a comprehensive summary of the Non-Statutory Public Consultations and Stakeholder Engagement processes for the CBC Infrastructure Works as a whole. It also provides a detailed record of the individual consultation and engagement processes for the Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme through each round of consultation.

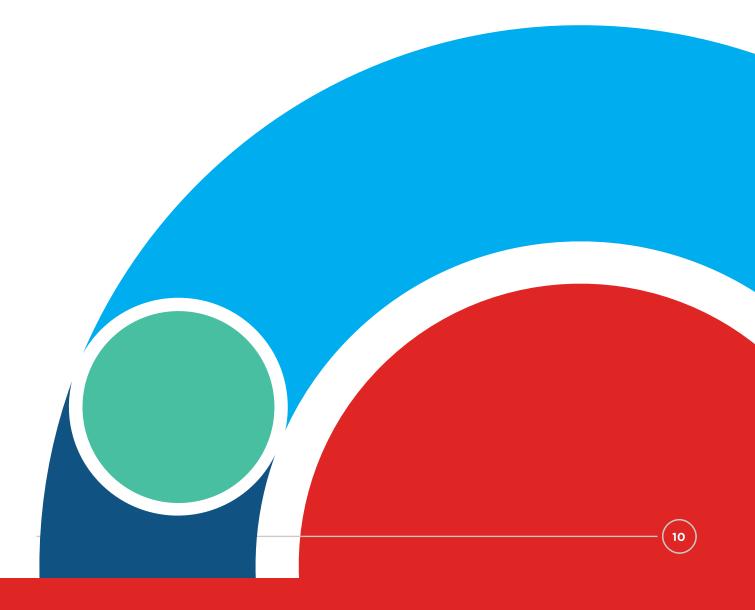

The rationale for the two components, is that, although the consultations on all the Proposed Schemes were carried out individually, they also formed integral parts of the overarching CBC Infrastructure Works public consultation process.

It is important to not only review the consultations for each Proposed Scheme on a standalone basis, but also with the full context of the whole CBC Infrastructure Works consultations. Therefore, the report structure is set out to provide a complete and inclusive assessment of the strategy framing the consultation process, the timeline of activity, the communication tools and processes as well as the dedicated engagement framework for reaching out to key stakeholders.

Copies of all the non-statutory public consultation and stakeholder engagement material for both the **Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme** and the complete CBC Infrastructure Works are in the Appendices of this report.

### The structure for the remainder of the report is set out as follows:

- **Chapter 2 -** Consultation Strategy on the overall Core Bus Corridor Infrastructure Works
- **Chapter 3 -** Consultation Timeline on the Core Bus Corridor Infrastructure Works
- **Chapter 4 -** Communication Tools and Engagement Practices on Core Bus Corridor Infrastructure Works
- **Chapter 5 -** Direct Engagement with Key Stakeholder Groups on Core Bus Corridor Infrastructure Works
- Chapter 6 Consultation on Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme
- **Chapter 7 -** Summary and Conclusions

2. Consultation Strategy on Core Bus Corridor Infrastructure Works

### 2.1 Objectives

As one of the largest infrastructural works currently being undertaken by the State, the NTA, through its BusConnects Infrastructure team, set out to undertake a lengthy period of non-statutory public consultation to take account of the views of a significant range of key stakeholders across the Dublin area including the general public and importantly those directly affected by the CBC Infrastructure Works.

The first aim of the non-statutory consultation process was to inform stakeholders about the proposal, the reasoning for its development, its linkage to public policy priorities, its benefits and potential impacts on the city.

Secondly, the BusConnects Infrastructure team sought to open up a two-way channel of communication to help inform the development of the CBC Infrastructure Works. The feedback received through this engagement would prove critical in reassuring stakeholders about the consultation process as being an effective and informative process to inform the draft designs and planning. Some amendments, adaptions and mitigating measures on the impact along Proposed Schemes were included as a direct result of the consultation process.

Thirdly, the development and execution of a comprehensive engagement and communications strategy would help to keep stakeholders updated on the development of the plans along each of the 12 stand-alone Core Bus Corridor Schemes. Given the complexity of the CBC Infrastructure Works, it was vital to continually communicate the evolution and changes to the Proposed Scheme.

Finally, rolling out the non-statutory consultation process would ultimately help to enhance aspects of the original proposals and ensure the final designs for the CBC Infrastructure Works took into account local concerns and mitigating strategies.

# 2.2 Approach

A strategic approach to engagement was adopted from the very outset of the launch of the BusConnects Dublin CBC Infrastructure Works. Detailed processes and structures were put in place regarding stakeholder engagement and communicating to the public regarding the consultations. Public awareness, consultation, feedback and stakeholder engagement have been important to inform the extensive planning and design process of the BusConnects Dublin Core Bus Corridors Infrastructure Works. A dedicated BusConnects communications team was established in 2017. This team works closely with the technical members of the BusConnects Infrastructure team at every stage of planning and design to facilitate good communications.

#### The communications approach taken has been:

- To continually raise public awareness and understanding about the CBC Infrastructure Works and our objectives;
- Have the widest possible range of stakeholders and general public engaged in the consultations;
- To inform and build relationships with our key stakeholders;
- To consistently provide information through a range of communication channels and accessible formats;
- To be proactive regarding public information and stakeholder engagement;
- To listen and learn especially where submissions and observations demonstrate informative local knowledge and experience;
- To where practical respond constructively to consultees' comments throughout the design and planning processes;
- To have active and sustained two-way communication and stakeholder engagement not just during the non-statutory public consultation rounds but consistently since 2017.

# 2.3 Plan Development

Comprehensive consultation and engagement arrangements were developed to deliver the non-statutory public consultation rounds. A wide range of communication channels were used to raise awareness of the consultations at each round and inform stakeholders and the general public of the latest proposals. Details of the consultation communications and engagement practices are set out in Chapters 3 and Chapter 4.

## 2.4 Execution and Impact

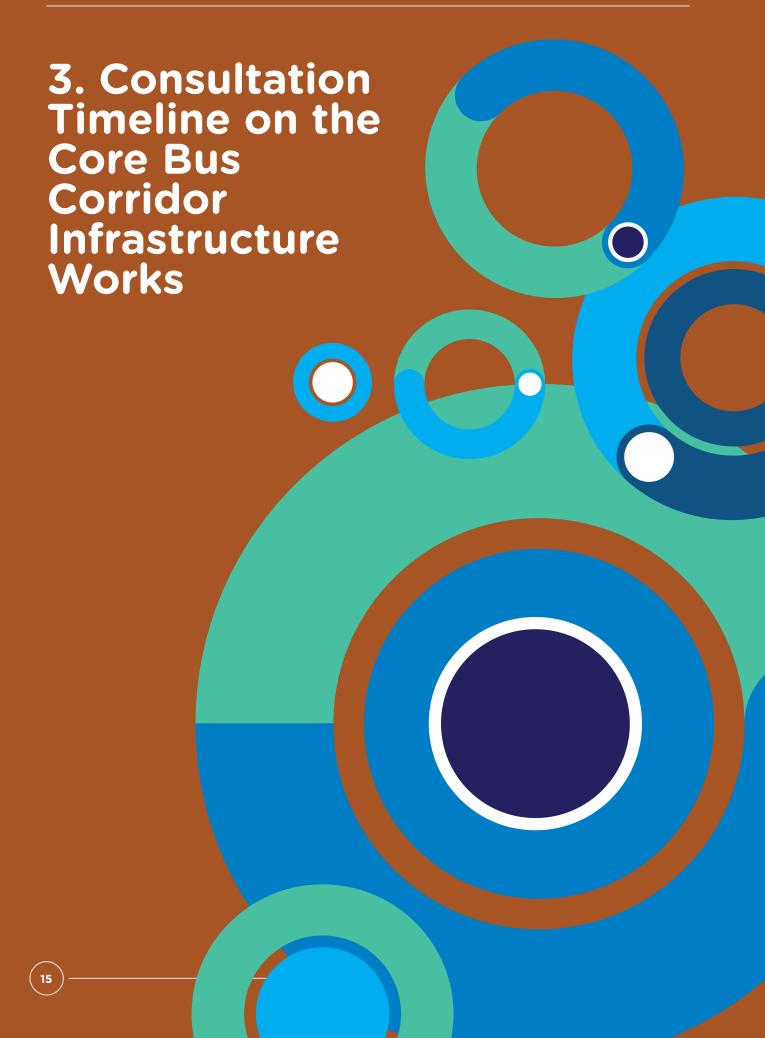

The following is a summary of the whole CBC Infrastructure Works communication channels and level of engagement since the first round of consultation was launched in November 2018.

### These included:

- One to One/Face-to-face meetings with Potentially Impacted Properties: 579
- Public Information Events & Attendees: 18 public information events with approx. 1,600 attendees
- Ommunity Forums & Attendees: 41 community forums with membership of 1,400 (Approx. 5,000 attended across all forums)
- Resident Group Meetings: Meeting with 39 groups across the 12 schemes with approx. 90 meetings.
- No. of submissions received in total 17,132
- Printed Brochures no. in total: 32,650
- Website visitors Total to-date: 143,775
- Twitter: 3.6 million tweet impressions, 4,316 followers
- Emails and Freephone numbers: 11,630 emails (excluding submissions)
- Freephone: 3672 calls received
- Virtual Room visitors Total: 6,039
- Number of letters issued: Approx. 4,732 to-date
- Public information advertisement campaigns: 81 newspaper advertisements, 418 radio advertisements, 776 bus shelter public consultation information messages, on bus
   Dublin Bus A2 x 500, GAI A2 x 40, 55 x Luas Portraits, 150 x Luas Straplines, 15 x Luas Columns, various social media campaigns also took place

(Audience Reach for these campaigns was 9,821,969 for print and online reach was 33,685,566. Audience reach data is sourced from MediaTel and gives an indication of the potential audience your coverage has reached. Online reach is derived from unique daily user figures and is adjusted for Ireland internet audience size.)

Figure 1.3 Summary of Key Engagements & Communication Metrics

# 3.1 Background

In May 2017 the NTA launched the BusConnects Programme and then in June 2018 published the Core Bus Corridors Project Report. The report was a discussion document outlining proposals for the delivery of Core Bus Corridor Routes across Dublin. **Details of the Programme launches and associated Documents can be seen in Appendix 1 and 2 respectively.** 

### 3.2 Rounds of Consultation

Since the commencement of the non-statutory period of the CBC Infrastructure Works, there has been a total of three rounds of non-statutory public consultation.

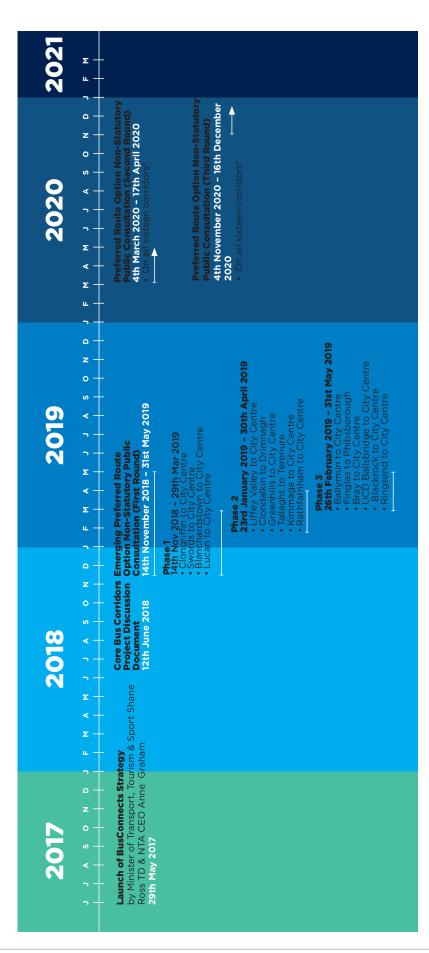

**First Round of Non-Statutory Public Consultation** - The first round of non-statutory public consultation on the **Emerging Preferred Route Options** was from November 2018 until May 2019 divided into three phases (See Figure 3.1 below). The reason it was divided into three phases was primarily due to the fact that the BusConnects Infrastructure team carried out all aspects of the first round without external design service providers having been appointed at that stage. Moreover, the BusConnects Infrastructure team sought to gain maximum engagement from the public from the commencement of the CBC Infrastructure Works to raise awareness, establish relationships and gain immediate insight and knowledge of the issues at an early stage.

It was also important that at the start of the non-statutory consultation that considerable time and resources were dedicated by the BusConnects Infrastructure team to initiate contact with potential impacted properties. Each of the potentially impacted property owners were offered the opportunity to meet with members of the BusConnects Infrastructure team on a one-to-one basis which meant a significant amount of resources had to be dedicated to this process.

**Second Round of Non-Statutory Public Consultation** - The non-statutory public consultation for the **Preferred Route Options** ran from March 2020 to April 2020 as Ireland entered the first lockdown due to the Covid-19 pandemic. The consultation continued in deference to the number of online submissions received during this period. A number of public facing elements of the consultation were cancelled in line with Government health guidelines, however, all other elements of the consultation including online versions of the brochures, supporting documentation were available. Other communication tools including the Freephone, email and digital aspects remained active for submissions to be received.

**Third Round of Non-Statutory Public Consultation** – This round of non-statutory public consultation for the **Preferred Route Options** from November 2020 to December 2020 was added due to the disruption caused to the second-round consultation process. It was important that further engagement was facilitated to communicate design development changes prior to

concluding the determination of the Preferred Route Options. Methods had emerged whereby traditional public information events could be replaced by virtual online alternatives to offset the restrictions that continued associated with the Covid-19 Pandemic. Accordingly, all elements of the public consultation and stakeholder engagement were conducted virtually or online in line with the Government health guidelines.

3.3 Calendar of Engagements

\* Because of geographic proximity and other interactions, a number of the sixteen individual corridors were amalgamated resulting in 12 Core Bus Corridor Schemes

4. Communication Tools and Engagement Practices on the Core Bus Corridor Infrastructure Works

### 4.1 Background

The public consultation tools included a dedicated website, public information events, community events, range of digital channels, traditional published material, press and radio advertising, outdoor advertising, presentations, infographics and virtual formats. The following paragraphs sets out the public consultations at a CBC Infrastructure Works level for all schemes. Chapter 6 provides specific details for the Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme consultation and engagement.

### 4.2 Published Material

**Brochure** - At each phase of the three non-statutory public consultations an individual brochure was recreated for each of the Core Bus Corridor Routes. The brochures were printed both in hard copy and online to view and download on the BusConnects website. They were available in a range of formats including PDF, HTML, Irish and Audio on the website.

Over the three rounds of non-statutory public consultation, 32,000 hard copies were printed and made available. The Core Bus Corridor Brochures for the Emerging Preferred Route for each of the routes were made available to all key stakeholders – commencing with a copy for all potentially impacted property owners – and available at all public information events, Community Forums, posted free of charge to members of the public by emailing or contacting the Freephone. Public Representatives were also provided with large volumes of copies of brochures on request.

For the second and third round of non-statutory public consultation, an updated version of each of the Core Bus Corridor Brochures for the Preferred Route was produced for both rounds. Each round of brochure contained the latest updated designs and key changes to previous versions of the proposals. The second and third round brochures were made available in online, accessible and hard copy formats as per the first round. Due to Covid-19 restrictions, the print version was made available on request only and provided to all potentially impacted properties owners. All other formats were available online.

Copies of Brochures were available at all public information events and community forums pre Covid-19. The brochures were also a feature of the virtual consultation rooms which are outlined further in this chapter.

Each brochure provided information of the BusConnects objectives, route maps along the particular Proposed Scheme, accompanied with a route description, key changes and facts, and details for queries and submission process including timelines and next steps.

See Appendix 3A, 4A and 5A for a copy of the three versions of the Brochure for this Proposed Scheme.

Below is an extensive but not exhaustive list of other published material which supported the non-statutory process of public consultation – all of which were made available to download, print or view on the BusConnects website. These included the following:

- Brochures for each Core Bus Corridor
- Summary "What is BusConnects" information leaflet
- BusConnects Core Bus Corridor Project Discussion Document June 2018
- Fact Sheets
- Preferred Route Option reports
- Background and Technical Documents including Draft Traffic Impact Assessments Reports, Approach to Environment Impact Assessments Report, Feasibility and Options Reports per Scheme
- Ocnsultation Reports (following first round of public consultation)
- Community Forum Presentations
- Public Realm Design Document
- Graphics and infographics
- Press releases
- Infographics
- Comment Sheets
- Online Web Forms
- A range of animations and videos
- Press advertisements

For a complete list of published materials available to view and download see Appendix 3F, 4E, 5F.

The published materials illustrated the level of detail, preparation and proactive engagement that has gone into both the stakeholder and public consultations. The published materials were continually updated with key changes as the proposals evolved from the Emerging Preferred Route Options to the Preferred Route Options.

### 4.3 Digital Communications

The BusConnects Dublin programme launched the BusConnects website, <a href="www.busconnects.ie">www.busconnects.ie</a> during May 2017. The website is the main repository for all initiatives related to BusConnects. For the CBC Infrastructure Works all brochures, supporting technical documents, fact sheets, maps, associated documents, consultation reports, contact information and a range of other information is available to view and download.

In addition, the BusConnects Dublin Core Bus Corridors Infrastructure Works section of the website provides key documents in a range of accessible formats including pdf, HTML, Easy to Read and Audio. The required documents have also been translated to provide Irish language versions.

To ensure that busconnects ie was accessible to everyone including blind, low-vision, keyboard only and switch users, the BusConnects Infrastructure team is committed to achieving a minimum of conformance level Double-A with the Web Accessibility Initiative (WAI) Web Content Accessibility Guidelines and complying with the National Disability Authority IT Accessibility Guidelines.

### 4.4 Social Media Channels

**Twitter and Facebook** - A BusConnects Twitter account (@busconnects) and Facebook page (BusConnects) were established to provide timely and regular updates on the progress of the BusConnects Programme. These online and digital tools have been used extensively to inform, educate and advertise the public consultation phases, public events, animations, timelines and closing dates. These information channels provided regular updates as the CBC Infrastructure Works designs evolved, as well as keeping stakeholders informed on the progress of the consultation process.

See Appendix 6F for examples of Twitter and Facebook activity.

### 4.5 Email, and Freephone and Post Channels

From the commencement of the BusConnects Dublin Core Bus Corridors Infrastructure Works, it was important to provide a range of two-way communication options for all stakeholders, including the general public, to be able to contact the BusConnects Infrastructure team with queries, send submissions and also requests for brochures or additional supporting documents to be issued.

**The Freephone service (1800 303 653)** – is available Monday to Friday 9am to 5pm and is for both general queries and also for potentially impacted property owners to contact to schedule an individual meeting with a BusConnects Infrastructure team member for one-to-one meetings in person or via zoom depending on Covid-19 restrictions.

**Emails** - A number of separate email addresses were established to deal with the different types of information requests and also for the volume of emails related to the CBC Infrastructure Works.

**General queries and requests** for information and brochures can be sent to **info@ busconnects.ie** or **cbc@busconnects.ie**. These queries are responded to by members of the BusConnects Infrastructure team.

**Submissions** and observations on the proposals were invited via the following channels:

- Online form this could be found on our website <a href="www.busconnects.ie">www.busconnects.ie</a>
- Submission box at available at public information events
- Or by post to the NTA offices in Dún Scéine

**Public representatives** - All public representatives have been able to engage and send queries into the NTA via a dedicated email facility for public representatives.

**Media** - All press and media related queries are received into the **press@busconnects.ie** email address.

### 4.6 Public Information Events

A series of Public Information events were held for the first round of consultation and a number also took place for the second round prior to the pandemic. These information events took place in accessible venues at locations along each of the Proposed Schemes. These venues were chosen to maximise the level of local engagement and attendance where possible. The dates and locations of each Public Consultation Event are listed in the tables below. These events allowed members of the public to speak directly and in detail with members of the BusConnects Infrastructure team about the proposals.

At each event, the following was available:

- Personnel from the BusConnects Infrastructure team and relevant Engineering Design service providers were on site to engage with stakeholders.
- Large scale overall route maps to view.
- Individual Large scale "pull-up" display maps (2mtrs x 1mtrs) for each section of the proposed route to view.
- Hard copies of the Scheme brochures for members of the public to view and take away.
- A1 and A2 large copies of the route maps for review.
- Electronic interactive screens to access other information like Google Maps were also used.
- Comment sheets for members of the public to make comments or provide their submission in writing on the day.
- Opies of previous Feasibility and Option Documents were available to view; etc.

These non-statutory Public Information Events were advertised in local newspapers, through radio, on the BusConnects website, through extensive email reminders to public representatives, Local Authorities' Public Partnership Networks (PPN's), emails to Community Forum members, promoted through social media and digital channels.

During the second round of non-statutory public consultation in March 2020, some of the scheduled Public Consultation Information Events had to be cancelled due to the Covid-19 pandemic and Government health guidelines at that time. Covid-19 restrictions were still in place during the third round of non-statutory public consultation, but an alternative method to facilitate interactive engagement to replace public information events was devised.

A list of the public consultation information events as well as sample images of the events can be seen in Appendix 6A.

# First Round of Non-Statutory Public Consultation Information Events on the Core Bus Corridor Emerging Preferred Route Option:

# Phase 1

Corridor	Venue	Date	Time
Clongriffin	The Hilton Hotel,	Thursday 10th	1pm - 9pm
to City Centre	Clongriffin.	January 2019	
Swords	Carnegie Court Hotel,	Friday 11th	1pm - 9pm
to City Centre	Swords.	January 2019	
Blanchardstown	Crowne Plaza,	Tuesday 15th	1pm - 9pm
to City Centre	Blanchardstown	January 2019	
Lucan	The West County,	Wednesday 16th	1pm - 9pm
to City Centre	Chapelizod	January 2019	
Dublin City Centre	The Gresham Hotel,	Thursday 17th	1pm - 9pm
Venue	Upper O'Connell St.	January 2019	

# Phase 2

Corridor	Venue	Date	Time
Clondalkin	Our Lady's Hall,	Tuesday 19th	3pm - 8pm
to Drimnagh	Mourne Road	February 2019	
Greenhills	Red Cow Morans	Tuesday 26th	3pm - 8pm
to City Centre	Hotel	February 2019	
Clondalkin to Drimnagh/ Liffey Valley to City Centre	Clayton Hotel, Liffey Valley	Thursday 28th February 2019	3pm-8pm
Kimmage	Dublin City Council,	Tuesday 5th	3pm - 8pm
to City Centre	Civic Offices	March 2019	
Tallaght	St. Mary's RFC,	Thursday 7th	3pm - 8pm
to Terenure	Templeville Road	March 2019	
Rathfarnham	Hilton Hotel,	Monday 11th	3pm - 8pm
to City Centre	Charlemont Place	March 2019	
Combined Location	Dublin City Council, Civic Offices	Tuesday 12th March 2019	3pm - 8pm

# Phase 3

Corridor	Venue	Date	Time
Bray to City Centre	Talbot Hotel Stillorgan	Thursday 26 March 2019	3pm - 8pm
UCD Ballsbridge to City Centre / Blackrock to Merrion	Clayton Burlington Hotel	Wednesday 27th March 2019	3pm- 8pm
Ringsend to City Centre	The Convention Centre, Spencer Dock	Monday 1st April 2019	3pm - 8pm
Ballymun to City Centre / Finglas to Phibsborough	Ballymun Axis Arts Centre	Wednesday 3rd April 2019	3pm - 8pm

# Second Round of Non-Statutory Public Consultation Information Events on the Core Bus Corridor Emerging Preferred Route Option:

Clongriffin to City Centre & Swords to City Centre  The Bonnington Hotel, Whitehall  The Talbot Hotel,  The Talbot Hotel,  Thursday 12th  Thursday 12th  The Talbot Hotel,  Thursday 12th	Corridor	Venue	Date	Time
Brow to City Contro.  The Talbot Hotel, Thursday 12th	Centre & Swords to	_	_	11.30am - 7.30pm
Stillorgan March 2020 11.30am - 7.30pm	Bray to City Centre	1	_	11.30am - 7.30pm

Other CBC Public Information events cancelled due to Covid 19

### 4.7 Virtual Consultation Rooms

Due to the Covid-19 pandemic, which commenced with restrictions in March 2020 and continued throughout the second and third public consultation rounds, the BusConnects Infrastructure team developed online and virtual elements to assist the public in viewing and reading the proposals.

Our primary virtual interactive tool during the final third phase of public consultation was the use of **virtual consultation rooms** available through the BusConnects website. Theses rooms were online for a six week period (24hrs x 7 days a week) and received over 7,000 views. In these virtual rooms, all Scheme materials were available for perusal, such as the brochure, maps and all associated support documentation. There was also audio description of the brochure information.

There was also a call back facility within the virtual rooms for any stakeholder to book a phone call back from a member of the BusConnects Infrastructure team for additional information or more detailed queries.

These Virtual Consultation Rooms replaced the more traditional Public Information Events due to the Covid-19 restrictions on face-to-face interactions, typically used during non-statutory public consultation. Compared to the face-to-face Public Information Events utilised during the first round of Non-Statutory Public Consultation the numbers of the public that engaged increased significantly due to the online access available through this facility.

Appendix 5C shows examples of a virtual room layout and content.

# 4.8 Public Information and Advertising Campaigns

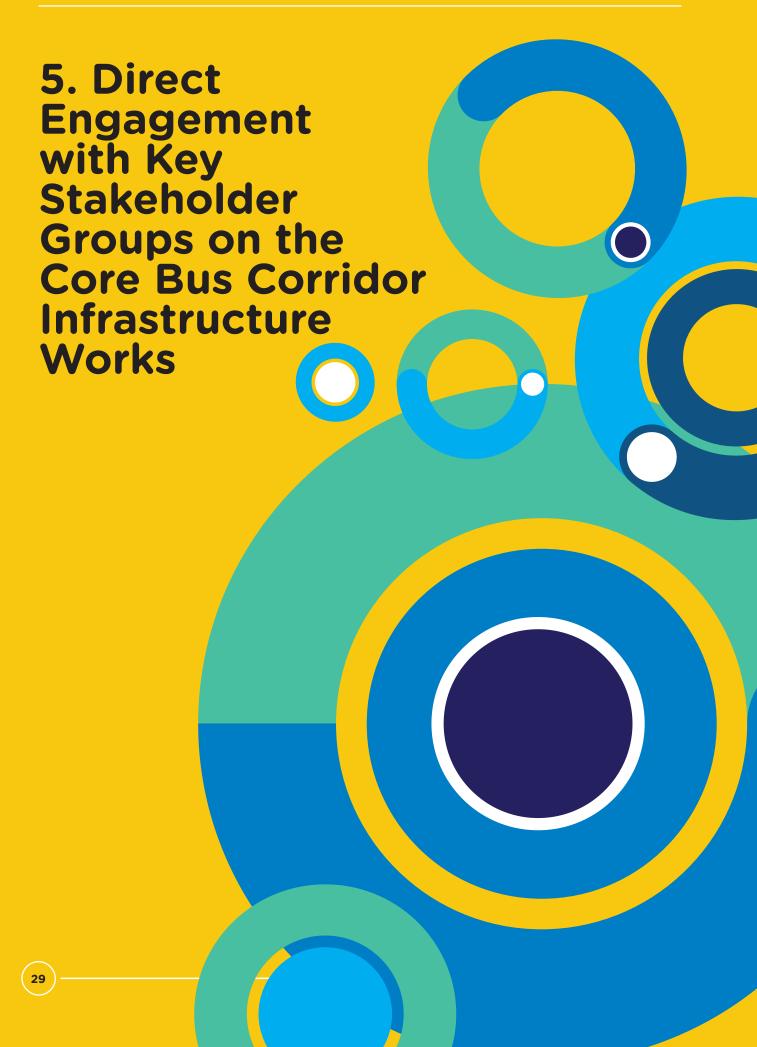

In order to reach as wide-ranging an audience as feasible across the Core Bus Corridor Schemes each phase of the non-statutory public consultation was supported by a comprehensive public information and advertising campaign. The campaigns were run across a range of media channels in a range of different formats. All the public information campaigns provided clear information and contact details with the BusConnects and NTA brand and logos so they could be easily recognised and read.

The advertisements detailed where stakeholders could access further information on the Schemes including viewing the proposals, joining community forums, making submissions and attending public information events were published in local and national newspapers. These advertisements were also placed on social media channels. Radio adverts played on local and national stations as well as Out of Home (OOH) bus shelters, on board buses and Luas advertisements. Targeted adverts were placed on Twitter, Instagram and Facebook.

See Appendix 2F, 3H, 4G and 5H for all advertisement material.

A press release was released for each round and phase of public consultation and was followed up by media briefings and presentations. The BusConnects Infrastructure team met with various media outlets and publications to discuss the proposals in detail and give media interviews. Press coverage of each phase was important in ensuring that details reached as wide an audience as possible, capturing those who may not ordinarily see advertisements or NTA announcements online and on social media.

For details on press coverage and reach of the BusConnects Programme from 2018-2021, please see appendix 3G, 4F and 5G.

### 5.1 Background

In addition to developing and implementing an extensive process of consultation on the CBC Infrastructure Works, the BusConnects Infrastructure team put in place a dedicated engagement plan for key stakeholders interested and potentially impacted by the Schemes.

Over the course of three years, the BusConnects Infrastructure team established new processes of engagement with potential directly impacted property owners along each of the routes as well as members of their communities who demonstrated an interest in the CBC Infrastructure Works.

## **5.2 Potentially Impacted Properties**

Across the 12 Schemes at the Emerging Preferred Route Options stage, a number of properties were identified that would potentially be impacted by the proposals in terms of property acquisition. The potential impact on the properties may include loss of front gardens, walls, and gate/entrances/parking.

At each phase of the non-statutory public consultation all such properties were contacted in advance of the publication of each set of proposals through registered post. The letters were sent in advance of any wider public communications regarding the plans. This was to allow the property owners and/or those renting the opportunity to receive details of any potential impact on their property before the public consultation information was published. These letters offered a direct line of one-on-one communication with the BusConnects Infrastructure team and details of the engagement process and copies of the full brochure and relevant route maps followed.

During the Emerging Preferred Route Option non-statutory Public Consultation, 1543 letters were issued to potentially impacted properties.

<b>Public Consultation Round</b>	Potentially Impacted Property
Emerging Preferred Route Option Public Consultation (14 Nov 2018 - 31 May 2019)	1543

Similarly, during the following second and third Preferred Route Option Public Consultations launched in March and November 2020, over 3,000 letters were issued to continually impacted, newly impacted and no longer impacted property owners as seen in the table below.

Public Consultation Round	Letter Type: Continually Impacted Property	Letter Type: Newly Impacted Property	Letter Type: No Longer Impacted Property
Preferred Route Option Public Consultation (04 March 2020 - 30 April 2020)	990	294	766
Preferred Route Option Public Consultation (04 Nov 2020 - 16 Dec 2020)	962	32	100

Appendix 3E, 4D and 5E - examples of each type of letter and sample map types issued.

## 5.3 One to One meetings

As there are a considerable number of potentially impacted properties it has been important that the BusConnects Infrastructure team provide a one to one meeting provision for any property owner who expressed an interest. This meeting service has been in place since the first round of consultation began and has been continuous since. The one to one meetings are with experienced BusConnects Infrastructure team members who have direct responsibility for the specific Scheme that the property is on. There has been almost 600 meetings to-date and in addition to the meetings there has been continuous phone calls and emails to maintain and support the engagement. These meetings continued during Covid-19 restrictions in a virtual capacity and are anticipated to continue throughout the planning and construction stages of each Scheme.

# **5.4 Community Forums**

A number of Community Forums were established during the first round of non-statutory public consultation in 2018 and have continued through all three rounds of consultation. The aim of the Community Forums was to create a two-way communication process with representatives of local communities, establish and build relationships, provide timely updates on the designs and plans, whilst listening to the issues and concerns raised by members of the community. There are currently 13 individual Community Forums.

The table below details the names of each Community Forum, the number of meetings held todate and the number of participants registered.

Community Forum	Average Number of Attendees	Number of Meetings Held
Clongriffin to City Centre Community Forum	24	3
Swords to City Centre Community Forum	105	4
Ballymun to City Centre & Finglas to Phibsborough Community Forum	75	3
Blanchardstown to City Centre Community Forum	94	4
Lucan to City Centre Community Forum	38	3
Liffey Valley to City Centre Community Forum	48	3
Clondalkin to Drimnagh & Greenhills to City Centre Community Forum	62	3
Tallaght to Terenure Community Forum	215	3
Kimmage to City Centre Community Forum	185	3
Rathfarnham to City Centre Community Forum	285	3
Bray to City Centre Community Forum	83	3
UCD Ballsbridge to City Centre & Blackrock to City Centre Community Forum	166	3
Ringsend to City Centre Community Forum	28	3
Total:	1,408	41

Community Forums have a current membership of over 1400 members and are a productive and valuable process to allow constructive ideas to be brought forward to inform the overall proposals.

Membership of the Community Forum comprises of typically two representatives from local resident and community associations, all disability groups or special interest groups, business organisations and public representatives along each scheme (Please note the number of representatives was increased from a single attendee per group to two following feedback). The terms of reference for the Community Forums can be seen in Appendix 3D, 4C and 5D

At the establishment of the Forums, all public representatives were invited to attend and become members. The BusConnects Infrastructure team also emailed all public representatives to inform their constituents about the Forums and relay the registration process and encourage local participation (*Appendix 3B, 4B and 5B respectively*).

Advertisements and press adverts (Appendix 3H, 4G and 5H) detailing the aims for establishing Community Forums were placed in local and national newspapers. These adverts also detailed how to nominate/become a representative at a Community Forum. Promotion of the Community Forums was published on the website and through social media channels and stakeholder emailing.

Each Community Forum meeting was chaired by a dedicated independent chairperson. The Community Forums took place from 6.30pm/7.00pm to 8.00pm/8.30pm to encourage participation. The venues for each Forum were identified along each Scheme to be accessible and allow local participation. Where possible all Forums were held in the same venue repeatedly for consistency.

At each Community Forum, personnel from the BusConnects Infrastructure team provided a detailed presentation on the particular scheme. The independent chairperson then proceeded to open the floor to a question-and-answer session for the remainder of the meeting.

During the third round of non-statutory Public Consultation, the Community Forum process needed to be adapted to function due to the government's Covid-19 restrictions on gatherings. The decision was taken to host these meetings via Zoom Webinars. The forum was again chaired by an independent chairperson with members of the BusConnects Infrastructure team responsible for the scheme presenting the proposals followed by a Q&A session. Attendees were invited to submit questions via the chat-box feature, these questions were addressed sequentially. In advance of the Community Forum Webinar, a Community Forum Webinar Protocols document was issued to all members outlining how the webinar would be run on the night. Please see Appendix 5D for a copy of the Community Forum Webinar Protocols document.

Community Forum presentations were made available to view and download on our website <a href="https://www.busconnects.ie">www.busconnects.ie</a> following each Forum. Members were also emailed a note of the Forum and a copy of the presentation subsequently.

Appendix 6B provides images of the Community Forum "set-up" as well as listing all the Community Forum meetings which took place.

The Community Forum presentations specific to this Scheme are available in Appendix 3D, 4C and 5D respectively.

As part of the ongoing communications with community forum members, CBC Infrastructure Works Status Update emails were issued in July 2019, April 2021 and August 2021. In addition, a status update was issued to community forum members as each individual scheme was submitted to An Bord Pleanála.

These Updates provided the latest information available at the time of the draft designs and plans. They also gave indications of next steps and any relevant presentations or materials.

See Appendix 3D, 4C, 5D and 6E for copies of these emails.

### 5.5 Residents Groups

Throughout the BusConnects Dublin Core Bus Corridors Infrastructure Works planning since early 2019, there has been extensive engagement with local resident's groups. Numerous residents' groups sent representatives to the BusConnects Community Forums but in addition to the Forums a significant amount of other meetings were held with local resident groups.

As the public consultation phases commenced, the BusConnects Infrastructure team has been contacted by individual and collective resident groups across many of the schemes. Over the last three years, the BusConnects Infrastructure team has engaged extensively with about 35 local groups. Almost 90 meetings have been held between these groups and the BusConnects Infrastructure team to address local issues and consider alternative options and proposals for specific areas. Overall, these meetings have been productive and insightful and will continue throughout the planning and construction stages.

The vast majority of the meetings were scheduled and hosted by the BusConnects Infrastructure team following requests from the groups to meet. On occasion, the BusConnects Infrastructure team has instigated engagement with resident groups to get particular views or provide relevant updates of the proposals.

The meetings were held in the NTA offices with attendees of average 10 representatives on behalf of the residents' group along with the BusConnects Infrastructure team members in relation to the relevant scheme. This engagement continued virtually on Zoom when the Government restrictions were introduced as a result of the Covid-19 pandemic.

A full list of resident group meetings including those specific to the Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme and details can be seen in Appendix 6D.

# **5.6 Public Representatives**

The NTA engages with public representatives, at local and national level, in an ongoing manner across all its projects and responsibilities. The CBC Infrastructure Works aims to greatly improve bus, cycling and sustainable transport services, and therefore, engagement and communication at all levels of local and national public representatives is a key component of the public consultation campaigns.

Since the launch in June 2018 of the BusConnects Core Bus Corridor Discussion Document, public representatives are regularly informed at the commencement of each round of non-statutory public consultation via email and were invited to attend specific briefings at each launch date in November 2019, March 2020 and again in November 2020.

Public representatives are provided with additional brochures, maps and documents upon request and the BusConnects Infrastructure team respond to many queries forwarded by public representatives on behalf of their constituents.

All Community Forum presentations, dates of events, invitations and regular CBC Infrastructure Works updates are sent to public representatives via email as a matter of process.

As part of the ongoing communications with public representatives and stakeholders, CBC Infrastructure Works Status Update emails were issued in July 2019, April 2021 and August 2021. In addition, a status update was issued to public representatives as each individual scheme was submitted to An Bord Pleanála.

### See Appendix 3D, 4C, 5D and 6E for copies of these emails.

These Updates provided the latest information available at the time of the draft designs and plans. They also gave indications of next steps and any relevant presentations or materials. These same Updates were sent to all Community Forum members also.

#### See Appendix 3B, 4B and 5B for copies of these emails.

Briefings with party groupings and individual elected members were facilitated as well as attendance by the NTA at the Oireachtas Transport Committee meetings a number of times over the last three years. The BusConnects Infrastructure team has provided regular updates to Local Authorities Transport Strategic Planning Committees (SPC's).

Engagement with public representatives from both the Oireachtas and the various Local Authorities is a continuous process which takes place not only during the consultation phases but as requested. This is an important process to reach as many people as possible in the communities surrounding each scheme.

### 5.7 Relevant Local Authorities and TII

The Local Authorities and Transport Infrastructure Ireland (TII) are key stakeholders for the CBC Infrastructure Works. These include Dublin City Council (DCC), Fingal County Council (FCC), Dun Laoghaire Rathdown County Council (DLRDCC), South Dublin County Council (SDCC), Wicklow County Council (WCC) and TII. All 12 Proposed Schemes of the CBC Infrastructure Works run within the DCC's geographical area, while sections of many of the Proposed Schemes run within the geographical areas of the other county councils. A number of the Proposed Schemes intersect with sections of LUAS lines and cross or run on sections of the national road network under the operational responsibility of TII.

Regular lines of communication and technical engagement have been established and grown over the lifetime of the CBC Infrastructure Works planning process with these key stakeholders. This has ensured that the key planning and traffic departments within the local authorities and TII are aware of the status of the draft designs and plans. Meetings are held as necessary on design development or specific issues.

There are dedicated liaison teams within each local authority and TII to act as a direct link to the BusConnects Infrastructure team. There are monthly update meetings presented by the Director of Infrastructure to the liaison teams to brief them collectively on aspects of the design development. These meetings are an effective means to ensure each stakeholder is aware of each other's projects across the areas covered by Schemes and an opportunity to raise issues or queries. In addition, there is ongoing interactions through meetings, emails and phone calls between the BusConnects Infrastructure team and the relevant stakeholder liaison personnel for onward engagement and dissemination of information with their wider organization's departments.

### **5.8 Special Interest Groups**

Disability Representative Groups and other special interest groups have also had opportunities to engage with the BusConnects Infrastructure team in the context of Community Forums. These special interest groups are diverse and representative of commuters, cyclist advocacy groups, disability groups, environmental and business groups. These groups were provided with maps and brochures as requested, and encouraged to make submissions on behalf of their members. They were also invited to public meetings and there have been a number of specific meetings between the BusConnects Infrastructure team, Disability Groups and Cycling Advocacy Groups. These meetings broadened the number of stakeholders significantly and allowed their specific areas of interest and concern to be considered.

Public Participation Networks (PPN) in the relevant local authorities, a network which allows local authorities to connect with community groups, were also informed regularly on updates surrounding the CBC Infrastructure Works. Various community and voluntary groups/ organisations register to join the PPN in their local authority area such as residents' associations, TidyTowns, disability groups, sporting clubs and environmental groups. The PPNs in Dublin City Council, South Dublin County Council, Dún Laoghaire-Rathdown County Council, Fingal County Council and Wicklow County Council were contacted and asked to forward information to their PPN members regarding the CBC Infrastructure Works non-statutory Public Consultations as well as the Community Forums relevant to their local authority. These PPN's had a combined membership of over 1,000 community and voluntary groups.

### 6.1 Background

The BusConnects Dublin Core Bus Corridors Infrastructure Works was launched on 29 May 2017 by Minister for Transport, Tourism and Sport Shane Ross TD and NTA CEO Anne Graham at an event held in the Irish Film Institute, 6 Eustace Street, Temple Bar, Dublin 2. This announcement and launch was supported by a press release. The BusConnects website www.busconnects.ie as well as specialised social media channels for BusConnects were also launched. Further details on the launch and supporting documents can be found in **Appendix 1**.

Following on from the initial announcement, the National Transport Authority published the Core Bus Corridors Project Report on 12 June 2018. This was announced via press release which was made available on busconnects.ie and nationaltransport.ie. A media briefing was held to launch the report which was then followed by a drop in briefing for public representatives. This discussion document set out draft proposals to vastly improve bus journey times and cycling priority along an increasing number of congested corridors in the Dublin region. The report identified the Greenhills to City Centre Core Bus Corridor and Clondalkin to Drimnagh Core Bus Corridor as two of the proposed CBCs. The brochure for each CBC as well as supporting documents can be seen in Appendix 2.

### 6.2 Emerging Preferred Route Option: First Round of Non-Statutory Public Consultation

### A. Overview

The first non-statutory round of public consultation on the CBC Infrastructure Works took place on a phased basis. The first phase of consultation occurred from 14th November 2018 to 29th March 2019. The second phase ran from 23rd January 2019 to the 30th April 2019 and the final phase ran from 26th February 2019 until the 31st May 2019.

The Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme Emerging Preferred Route Option formed part of the second phase of consultation, which closed on the 30th April 2019. There were 87 submissions relating to the Greenhills to City Centre Core Bus Corridor with 13 submissions received relating to the Clondalkin to Drimnagh Core Bus Corridor. These submissions ranged from individual submissions by residents, commuters and local representatives, to detailed proposals from public bodies, various associations and private sector businesses.

The second phase of the first round of Public Consultation was launched on 23 January 2019 via press release. Please see **Appendix 3A** for documents relating to this launch.

Advertisements detailing where interested parties could access further information on the CBC including viewing the proposals, joining community forums, making submissions and attending information events were advertised in local and national newspapers as well on social media. (Appendix 3H).

### B. Engagement

### i. Potentially Impacted Properties

Letters were delivered to each individual potentially impacted property affected by the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor on 18 January 2019. Each potentially impacted property was also sent a copy of the Emerging Preferred Route brochure for the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor respectively (Please see Appendix 3E for a copy of this letter).

In total, 270 letters were delivered on 18 January 2019 along the Greenhills to City Centre Core Bus Corridor, with 33 property owners availing of the one-to-one meetings. 19 letters were delivered on 18 January 2019 along the Clondalkin to Drimnagh Core Bus Corridor, with 3 property owners availing of the one-to-one meetings.

### Emerging Preferred Route Option Public Consultation (14 Nov 2018 - 31 May 2019)

Core Bus Corridor	Letter Type: Potentially Impacted Property
Greenhills to City Centre CBC	270
Clondalkin to Drimnagh CBC	19

### ii. Public Representatives

An email was issued to all TDs, Senators and Councillors in the area in tandem with the press release, detailing the CBC and inviting them to view the proposals and to discuss with their constituents. Individual or party grouping briefings were also offered as well as information on joining Community Forums. Please see **Appendix 3B** for correspondence with public representatives..

### iii. Public Consultation Information events

For the Greenhills to City Centre Core Bus Corridor, a dedicated information event was held at Red Cow Morans Hotel on 26 February 2019 from 15.00-20.00. For the Clondalkin to Drimnagh Core Bus Corridor, a dedicated information event was held at Our Lady's Hall, Mourne Road on 19 February 2019 from 15.00-20.00A subsequent information event covering all of the CBCs for Phase 2 took place at the Dublin City Council Civic Offices on 12 March 2019 from 15.00 – 20.00.

The information events were advertised in local and national newspapers and on social media (Appendix 3H).

### iv. Community Forums

The first Community Forum meeting for the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor took place on 12 February 2019 at Our Lady's Hall, Mourne Road from 18.30 – 20.00 with approximately 60 representatives in attendance.

The presentation for this meeting was made available to view and download on our website. Subsequently, a report on the meeting was issued to all registered attendees (Appendix 3D).

### v. Resident Groups

Throughout the CBC Infrastructure Works, residents' groups have been engaged with. Members of the BusConnects Infrastructure team met representatives from Walkinstown Drimnagh/Working Group and the Crumlin Residents Group in June and July of 2019 to discuss the proposals on the Tallaght / Clondalkin to City Centre Core Bus Corridor scheme. Please see appendix 6D for a complete list of residents groups that the BusConnects Infrastructure team have engaged with.

### vi. Digital and Online Resources

Brochures for both the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor were developed and made available to view and download on the BusConnects website (Appendix 3A). In addition to the brochure, the following technical reports for each Core Bus Corridor were also available to view and download on the website:

- Route Selection Report
- Concept Design Drawings
- Appendix A MCA Tables
- Appendix C Technical Note on Junctions
- Appendix D Junction modelling report

Following the conclusion of the public consultation, a Consultation Submission Report was also made available to view and download on our website. Hard copies were available upon request.

For a complete list of published materials that were available to view and download during this round of non-statutory consultation, please see **Appendix 3F**.

### 6.3 Preferred Route Option: Second Round of Non-Statutory Public Consultation

### A. Overview

Following the first round of consultation, all submissions were reviewed and considered in the design process for each CBC. In March 2020, the Draft Preferred Route Option was published and a public consultation covering the Preferred Route Option for each CBC, including both the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor, commenced on 04 March 2020 and ran until 17 April 2020. The consultation was announced via press release and a media briefing (Appendix 4F) that took place in the Alex Hotel, Fenian Street from 10.00 – 12.00.

Due to the COVID-19 pandemic, all events scheduled after 12 March 2020 were cancelled. In deference to the submissions we had already received, the decision was made not to cancel the consultation.

Consequently, there were just 10 submissions received for the Greenhills to City Centre Core Bus Corridor. 6 submissions were received for the Clondalkin to Drimnagh Core Bus Corridor. These submissions ranged from individual submissions by residents, commuters and local representatives, to detailed proposals from various associations and private sector businesses.

Advertisements detailing where interested parties could access further information on the CBC including viewing the proposals, making a submission and attending information events were placed in local and national newspapers, online and in highly visible areas around the Greater Dublin Area (Appendix 4G).

### **B.** Engagement

### i. Potentially Impacted Properties

Following the review of the proposals, there were some changes to the number of properties that were potentially impacted. Three different versions of a letter (see Appendix 4D) were prepared and the appropriate version delivered to each of these potentially impacted properties on 02 March 2020, with recipients invited to schedule meetings with the BusConnects Infrastructure team if they wished to discuss the proposals on an individual basis. There was a version of the letter for those who had been previously written to in the first round launch and who were continuing to be potentially impacted. There was a version of the letter for those who had not been previously written to in the first round launch and who were now newly potentially impacted, and there was a version of the letter for those who had been previously written to in the first round launch and who were no longer continuing to be potentially impacted.

326 letters were distributed along Greenhills to City Centre Core Bus Corridor Proposed Scheme with 1 meeting taking place. 44 letters were distributed along the Clondalkin to Drimnagh Core Bus Corridor Proposed Scheme with no meetings taking place.

### Preferred Route Option Public Consultation (04 March 2020 - 17 April 2020)

Core Bus Corridor	Letter Type: Continuing Potentially Impacted Property	Letter Type: Newly Potentially Impacted Property	Letter Type: No Longer Potentially Impacted Property
Greenhills to City Centre CBC	123	51	152
Clondalkin to Drim- nagh CBC	19	24	1

### ii. Public Representatives

An email was issued to all public representatives on the morning of the launch, in advance of the press release. An invitation was sent on 02 March 2020 to all public representatives inviting them to attend a drop-in briefing for all public reps in the Alex Hotel from 14.00–17.30 on the date of the launch (Appendix 4B). TDs, Senators and Councillors were invited to attend to view the new proposals, speak with members of the BusConnects Infrastructure team and pick up hard copies of the proposals and maps.

### iii. Public Consultation Information Events

Members of the public were invited to attend to review the changes made to the proposals since the first round of consultation in 2018/2019 and to discuss concerns and observations with members of the BusConnects Infrastructure team. While this public consultation was completed, due to Covid-19 restrictions being imposed by Government in mid-March, planned Public Information Events for the Tallaght / Clondalkin to City Centre CBC scheme and other schemes were impacted and had to be cancelled.

### iv. Community Forums

The second Community Forum for the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor was held in Our Lady's Hall, Mourne Road on 17 September 2019 from 18.30 – 20.00, with approximately 60 in attendance.

This round of Community Forums were held for each CBC in advance of the launch of second round of non-statutory public consultation. The meeting aimed to keep members updated on the design process between the first and second consultation. The presentation was emailed to attendees following the meeting and was also made available to view and download on our website. Subsequently, a report on the meeting was issued to registered attendees. Both the presentation and report can be seen in Appendix 4C.

### v. Resident Groups

Throughout the CBC Infrastructure Works, residents' groups have been engaged with. Members of the BusConnects Infrastructure team met representatives from Walkinstown/Drimnagh Working Group and the Crumlin Residents Group in June and July of 2019 to discuss the proposals on the Tallaght / Clondalkin to City Centre Core Bus Corridor scheme. Please see appendix 6D for a complete list of residents groups that the BusConnects Infrastructure team have engaged with.

### vi. Digital and Online resources

As with the first round of consultation, all materials relevant to the CBC were made available to view and download on our website <a href="www.busconnects.ie">www.busconnects.ie</a>. The brochure was available in Easy to Read format, plain text and audio description as well as an Irish version. Hard copies of the brochures were also available upon request. Traffic Count Data 2019 - 2020 was also published for consideration during this round of consultation, with information on each CBC.

For a complete list of published materials that were available to view and download during this round of non-statutory consultation, please see Appendix 4E.

### 6.4 Preferred Route Option: Third Round of Non-Statutory Public Consultation

### A. Overview

The third round of non-statutory public consultation for the CBC Infrastructure Works took place from 4th November 2020 until 16th December 2020 on the updated Draft Preferred Route Option, including for the Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme. With the continuing effect of the Covid-19 pandemic and associated Government restrictions, the third Public Consultation was held largely virtually. Our regular consultation communication methods were adapted to allow the process to take place using virtual and online facilities. The consultation was announced via press release, on our website and on social media (Appendix 5G).

All relevant information including the updated Information Brochures and the public consultation reports were made available on the BusConnects website (www.busconnects. ie) to view and download.

Advertisements detailing where interested parties could access further information on the CBC including viewing the proposals, making a submission and attending information events were placed in local and national newspapers, online and in highly visible areas around the Greater Dublin Area (Appendix 5H).

There were 189 submissions received as part of the Greenhills to City Centre Core Bus Corridor during this round of non-statutory public consultation. There were 114 submissions received as part of the Clondalkin to Drimnagh Core Bus Corridor during this round of non-statutory public consultation.

### B. Direct Engagement with Key Stakeholders

### i. Potentially Impacted Properties

Those continuing to be potentially impacted; newly potentially impacted; or no-longer potentially impacted properties were written to directly (Appendix 5E) to receive information on the consultation in advance of any wider publication of the proposals.

One-to-one meetings were offered via Zoom or over the phone for those who wished to discuss the proposals further in relation to their own property as part of the consultation process.

125 letters in relation to the Greenhills to City Centre Core Bus Corridor were sent between 01 and 03 November 2020. 16 letters in relation to the Clondalkin to Drimnagh Core Bus Corridor were sent between 01 and 03 November 2020.

### Preferred Route Option Public Consultation (04 March 2020 - 17 April 2020)

Core Bus Corridor	Letter Type: Continually Potentially Impacted Property	Letter Type: Newly Potentially Impacted Property	Letter Type: No Longer Potentially Impacted Property
Greenhills to City Centre CBC	123	1	1
Clondalkin to Drim- nagh CBC	15	0	1

### ii. Public Representatives

Public representatives were made aware of the publication of the revised proposals via email. This email also contained information on Community Forums for TDs, Senators and Councillors to assist in spreading awareness of the meetings. A briefing session was organized via Zoom to take place on 4 November 2020 from 14.00 – 15.00. Members of the Transport & Communications Networks Oireachtas Committee were separately made aware of the launch. Please see **Appendix 5B** for engagement with public representatives.

### iii. Public Consultation Virtual Information Rooms

Due to ongoing Government restrictions, traditional information events required a rethink. Virtual rooms were created for each CBC that could be accessed for the entirety of the consultation dates. The rooms could be accessed via the BusConnects website and contained all of the information needed to make an informed submission. This included a description of each Preferred Route from start to finish with supporting maps and included information of all revisions made, if any, since the previous rounds of public consultation as well as other supporting documents. Please refer to Appendix 5C for material in relation to the public consultation virtual information rooms.

All boards were equipped with audio description. Over the seven weeks of the consultation, 363 unique users visited the virtual information room for the Tallaght / Clondalkin to City Centre Core Bus Corridor scheme.

The virtual rooms also contained a feature for members of the public to request a call back service from a member of the BusConnects Infrastructure team should they require more information. There were 2 call back requests for the Tallaght / Clondalkin to City Centre Core Bus Corridor Scheme.

The consultation period remained open until 16th December 2020 and submissions could be made by email, through the virtual consultation room or by post.

### iv. Community Forums

A further round of Community Forums were run during the third round of Public Consultation. Members of each Community Forum were contacted directly on the day of the launch of the public consultation via email. As with the public information events, the Community Forum process needed to be adapted to function during government restrictions on gatherings. The decision was taken to host these meetings via Zoom Webinars. The forum was again chaired by an independent chairperson with members of the BusConnects Infrastructure team responsible for the CBC presenting the proposals, followed by a Q & A session. Attendees were invited to submit questions via

the chat-box feature, these questions were addressed in order of submission.

The Greenhills to City Centre Core Bus Corridor and Clondalkin to Drimnagh Core Bus Corridor Community Forum meeting took place on 25 November 2020 from 18.30 – 20.00 with approximately 50 representatives in attendance.

Materials in relation to these Community Forums can be seen in Appendix 5D.

### v. Resident Groups

All Resident Groups along the Proposed Scheme were alerted to the publication of the consultation via email. Zoom meetings were available for any groups that wished to meet with the BusConnects Infrastructure team to discuss the impact of the proposals on their community and express their views.

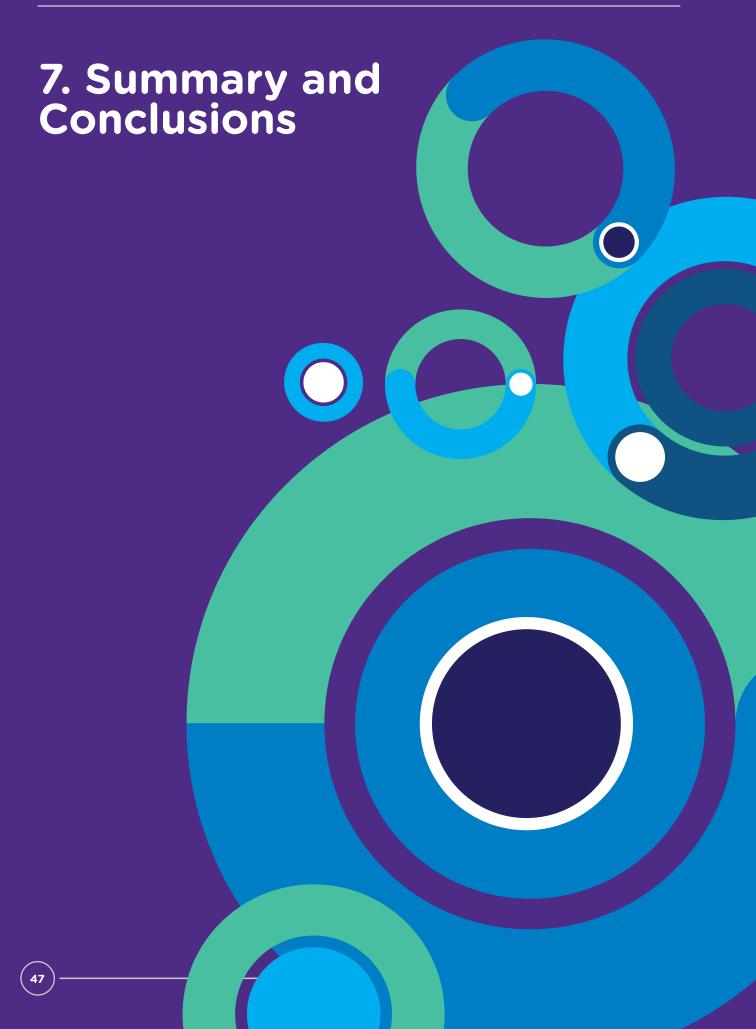

Throughout the CBC Infrastructure Works, residents' groups have been engaged with. Members of the BusConnects Infrastructure team met representatives from Walkinstown/Drimnagh Working Group, Crumlin Residents Group and the Kimmage & Crumlin Representative Group to discuss the proposals on the Tallaght / Clondalkin to City Centre Core Bus Corridor scheme. Please see appendix 6D for a detailed list of residents groups that the BusConnects Infrastructure team have engaged with.

### vi. Digital and Online resources

Due to Covid-19 restrictions, all communications were done online via the BusConnects website and Zoom. In addition to the virtual rooms, the following documents were available on our website to view and download:

- Information Brochure for Revised Preferred Route Option (in English and Irish)
- Audio version of Brochure
- HTML version of Brochure
- Draft Preferred Route Option Consultation Report
- Proposed Approach to Environmental Assessment
- Draft Transport Modelling Report

For a complete list of published materials that were available to view and download during this round of non-statutory consultation, please see Appendix 5F.

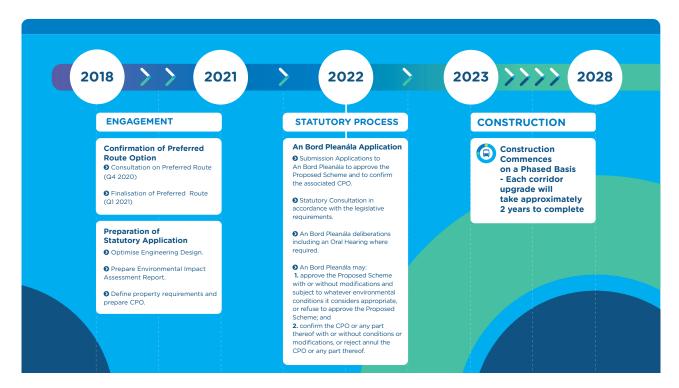

Figure 1.4 Timeline for the Core Bus Corridor Process

The BusConnects Infrastructure team carried out three rounds of non-statutory public consultation between November 2018 and December 2020. The lengthy and extensive public consultation phases ensured the views and observations of a large number of key stakeholders and the general public were received and considered. From the first to the third round of public consultation over 17,000 submissions were received and reviewed by the BusConnects Infrastructure team. These submissions played a significant role to inform the draft designs and plans whereby a range of amendments and adaptions were included as a direct result of the stakeholder and consultation process. In summary, the stakeholder engagement and public consultation allowed for an effective two-way communication to inform and build relationships with our key stakeholders.

Since 2018, the BusConnects Infrastructure team has provided an active and prominent level of communication and engagement. This has included the provision and publication of a large number of draft designs, communication materials and support documents to assist in informing stakeholders from the Emerging Preferred Route phase all the way to the Preferred Route designs. The public consultation and engagement process has resulted in a considerable level of public awareness and understanding of the BusConnects CBC Infrastructure Work's aims and objectives. It has also led to the BusConnects Infrastructure team having a keen appreciation of the many stakeholder issues and to be able to consider them during the draft design and planning phases of each individual Scheme.

In conclusion, the non-statutory public consultation rounds provided local and informative insights; allowed for considerable discourse and engagement and in many cases enhanced aspects of the draft designs. The public consultation has ensured that the BusConnects Infrastructure team were cognisant of stakeholder feedback and appraised of many local considerations as the designs evolved.

### Launch of BusConnects Strategy by Minister for Transport, Tourism & Sport Shane Ross TD & NTA CEO Anne Graham - 29th May 2017

Bus Connects Transforming City Bus Services Brochure May 2017

Ireland in 2017 has left behind the worst of the recession caused by the economic crises in 2007/2008. The economy is growing strongly; more and more people are at work; the number of visitors to the country is at record levels. But threats and challenges remain, with traffic and transport among the key problems facing the region.

Congestion is in danger of strangling the life out of our cities, and we need an ambitious public transport plan to get to grips with it.

The number of cars on the roads is increasing. It takes longer to travel to work, to college and to school than last year or the year before. The working day is getting longer as traffic delays force people to leave earlier for work and return later each day.

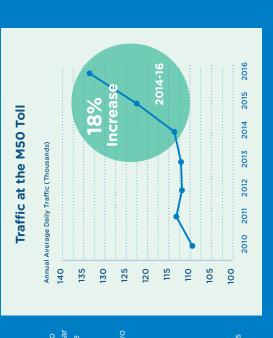

As a barometer for the region, the average daily traffic at the tolling point on the M50 was almost 18% higher in 2016 than two years earlier in 2014.

Increased traffic means slower speeds and longer journeys.

On the M50, the average journey from Junction 3 (at the M1)

to Junction 6 (at the N3) took three times longer in 2016 than

We see this across all of the major routes in the region. Using data from car navigation units, we know that average traffic speeds on main roads during the 8am to 9am peak hour, across the region, fell by almost 5.5% between 2014 and 2015.

"Journeys by car in the morning peak hour take, on average, over 18% longer than just two years ago."

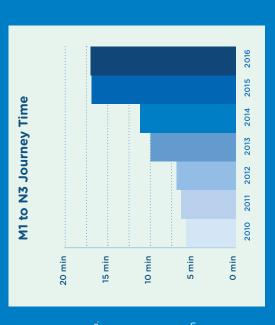

This trend accelerated during 2016 with the average traffic speed across the region in the morning peak decreasing from 391 km per hour in 2015 to 33.7 km per hour in 2016, a fall of 13.8%.

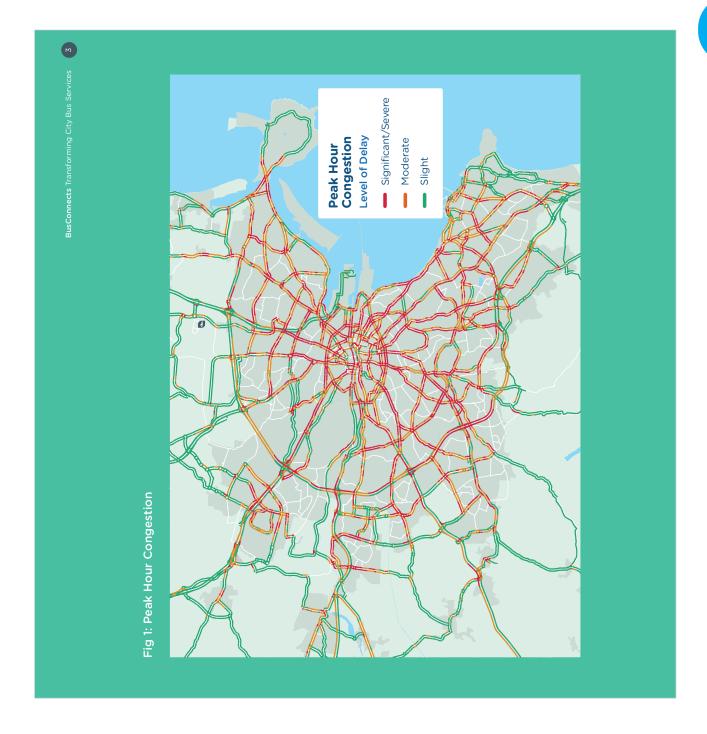

As traffic speeds decrease, peoples' journey times by car increase. On average, journeys by car across the region during the morning peak hour take over 18% longer than two years ago

The situation facing the Dublin region is that:

- without decisive action, traffic congestion will continue to
- it will impact the ability of the region to grow economically;
- longer journey times and increased travel stress will diminish many people's quality of life; and
- environmental emissions targets will not be met.

If we want to make Dublin a better place to live, work ar we need a solution.

### Our solution

The Transport Strategy for the Greater Dublin Region 2016-2035 ("Transport Strategy") provides a framework for transport development across the region over the next two decades. It identifies rail, metro and Luas projects that need to be implemented but, significantly, it recognises that the bus system will be the main form of public transport for most people and that the bus system needs to be fundamentally transformed to serve the needs of the region.

Dublin is a low density city - we don't have skyscrapers, and most people live in single house units. This means that very few areas of Dublin have the size and concentration of population to support rail-based public transport. For most corridors in Dublin, bus transport represents the optimum public transport solution.

We now need sweeping changes to our bus system to enable it to fully meet the needs of a modern public transport system; one which enables more people to travel to more places, conveniently and efficiently.

**Busconnects** is a plan to fundamentally transform Dublin's bus system, so that journeys by bus will be fast, reliable, punctual, convenient and affordable.

It will enable more people to travel by bus than ever before, and allow bus commuting to become a viable and attractive choice for employees, students, shoppers and visitors.

**BusConnects** aims to overhaul the current bus system in the Dublin region by:

- building a network of "next generation" bus corridors on the busiest bus routes to make bus journeys faster, predictable and reliable;
- introducing Bus Rapid Transit, a higher quality of bus system, on three of the busiest corridors;
   completely redesigning the network of bus routes to provide
  - a more efficient network, connecting more places and carrying more passengers;
    developing a state-of-the-art ticketing system using credit and debit cards or mobile phones to link with payment accounts and making payment much more convenient;
- implementing a cashless payment system to vastly speed up passenger boarding times;
- revamping the fare system to provide a simpler fare structure, allowing seamless movement between different transport services without financial penalty;

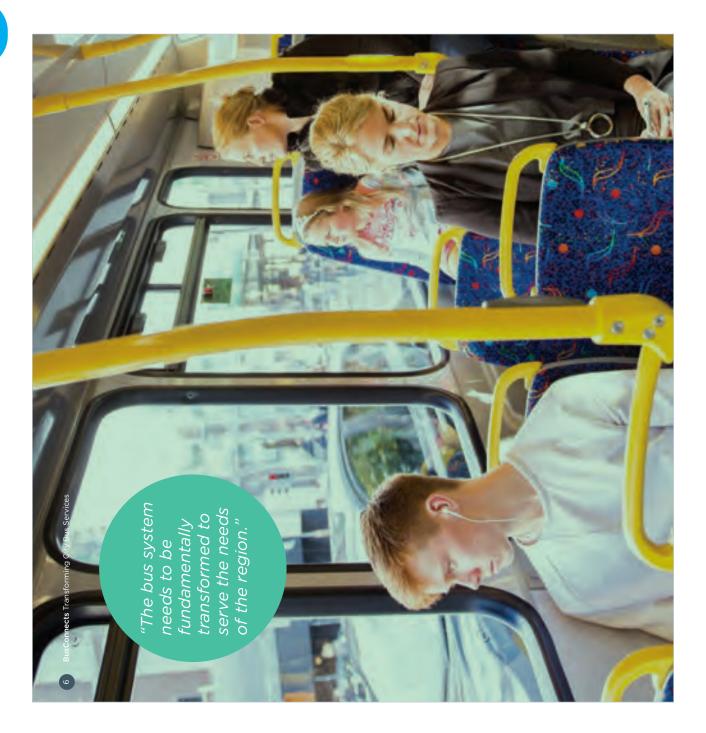

- implementing a new bus livery providing a modern look and feel to the new bus system;
- rolling out new bus stops with better signage and information and increasing the provision of additional bus shelters; and
- transitioning starting now to a new bus fleet using lowemission vehicle technologies.

BusConnects represents a reimagining of the bus services for the Dublin region. It encompasses the revamping of all aspects of the bus system: from the ticketing technology to the road infrastructure; from the bus stops to the network of routes; and from the fare structure to the vehicle livery.

It represents a bold solution to a complex problem.

**P** 

# A network of "Next generation" bus corridors

At the heart of the **BusConnects** project is the proposal to develop continuous bus lanes, as far as is practicable, along the busiest bus corridors.

The Transport Strategy sets out a network of bus corridors forming the "Core Bus Network" for the Dublin region. There are eleven radial bus corridors planned in addition to the Bus Rapid Transit routes, as well as three orbital bus corridors.

At present, these busy bus routes only have dedicated bus lanes along less than one third of their lengths. This means that for most of the journey, buses are competing for space with general traffic and so are affected by the increasing levels of congestion.

The resultant delays are a source of real frustration for people looking for consistent and predictable journey times. This makes the overall bus system less efficient, less reliable and less punctual. As a result, many people do not see any benefit in choosing bus transport.

Our objective is to develop these eleven radial bus corridors and three orbital bus corridors so that each will have continuous bus priority - in other words, a continuous bus lane in each direction. This "next generation" of bus corridors will deliver a transformation in the performance of these routes, making it easier and quicker for you to come and go by bus, whether your journey is related to your job, your studies, or your social life and family life.

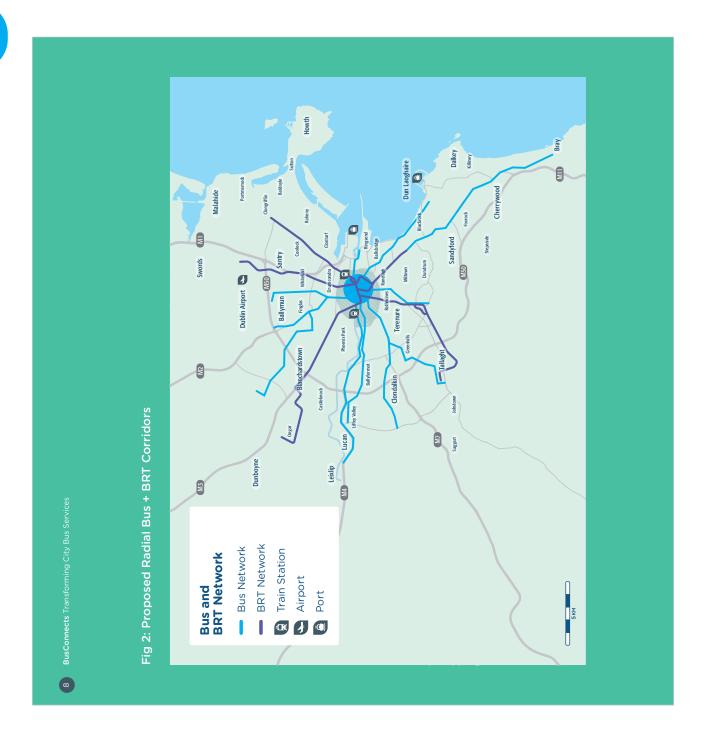

We want to remove the current delays and uncertainties, so that in the future, bus journeys will be faster, more punctual and more reliable. Making those changes is an essential part of delivering a vastly improved service for passengers.

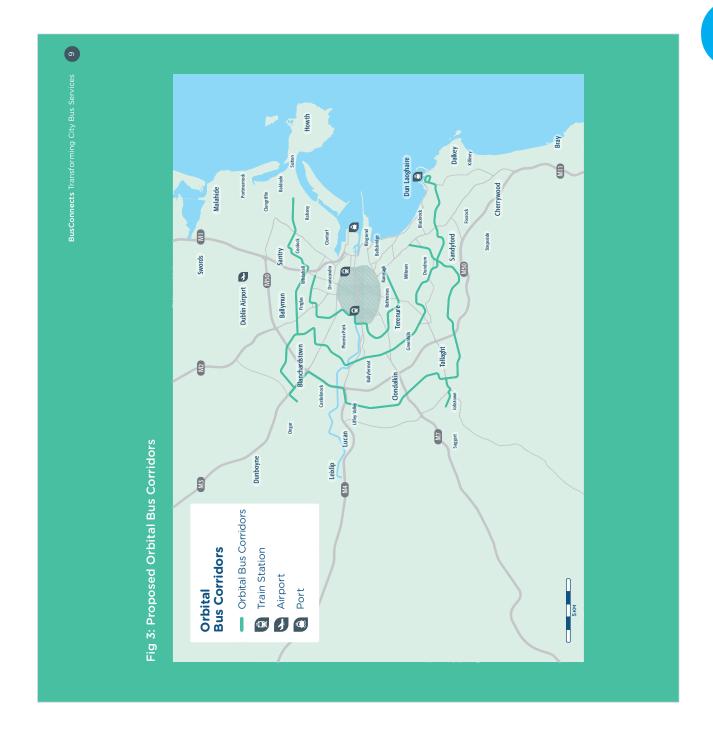

Achieving this will, in some instances, require a widening of the road and changes to parking arrangements, but the end result will not just be better services for bus passengers, but will benefit all users of the corridor.

Cyclists will be provided with safe cycling facilities, largely

Cyclists will be provided with safe cycling facilities, largely segregated from other traffic, along these routes. Pedestrians will benefit from additional safe pedestrian crossing points and reconstructed footpaths. Car users will have reduced interactions with cyclists and buses as well a resurfaced roadway providing smoother journeys with less wear on vehicles.

We will also take the opportunity of enhancing key local centres on the corridors with additional landscaping and other works aimed at improving the local environment in these centres.

forming the Core busiest routes 'BRT will be a great solution

### **Bus Rapid Transit**

Bus Rapid Transit (BRT) is a high-quality bus based transit system that delivers a service with higher speeds and quality of service than traditional bus services.

and providing specially designed vehicles, with rapid, frequent We're planning to do this by improving road infrastructure operations and faster boarding and alighting.

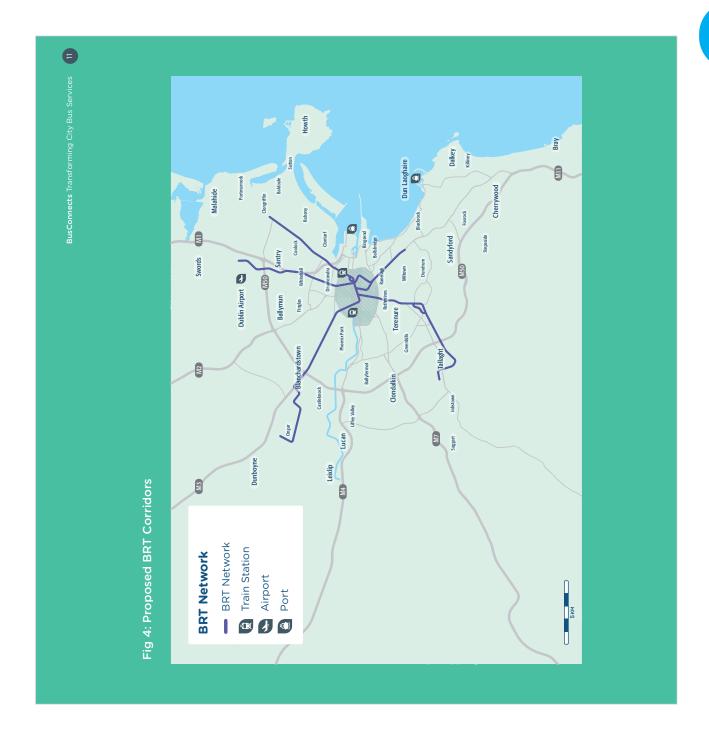

Corridors will be developed as Bus Rapid Transit routes, where the passenger numbers forecast are approaching the limits of We are proposing that a number of the Core Radial Bus conventional bus route capacity.

Bus Network."

bus services on some of the busier bus corridors in the Dublin BRT will represent a major step-change in the provision of region.

than normal buses, a BRT route can cater for a higher volume of A typical BRT system uses multi-door vehicles, higher platforms for level boarding and stops that are spaced further apart than those that serve conventional buses. Using different vehicles passengers than a normal bus corridor.

integrated into the overall bus system, providing a coordinated In designing the BRT details, we will ensure that it is fully overall network.

"Under
BusConnects we are undertaking a major redesign of the bus network."

### Reimagining our network

The current system of bus routes and services in Dublin is complex. With about 130 different bus routes forming the Dublin Bus network, very few people would be able to describe the routes of more than a handful of those services and most users limit themselves to a few familiar routes.

In fact the foundations of much of the bus network dates back to tram routes that first ran in the 19th century! As a result, the bus network in Dublin is very radially focused, with most routes emanating outwards from the City Centre. Orbital bus services routes that skirt the city – are few and far between. As a result, many bus journeys can only be made by firstly traveling into the City Centre on one radial route, and then taking another radial bus service out. Understandably, many people are not inclined to take the bus in these circumstances

Connecting between one bus route and another as part of the same journey is part and parcel of public transport in cities around the world, but for historic reasons it is not really part of the public transport culture in Dublin. We believe that a system

with greater scope for interconnection between routes, and where connecting passengers don't necessarily have to travel to the city centre, is one that would be far more attractive and convenient.

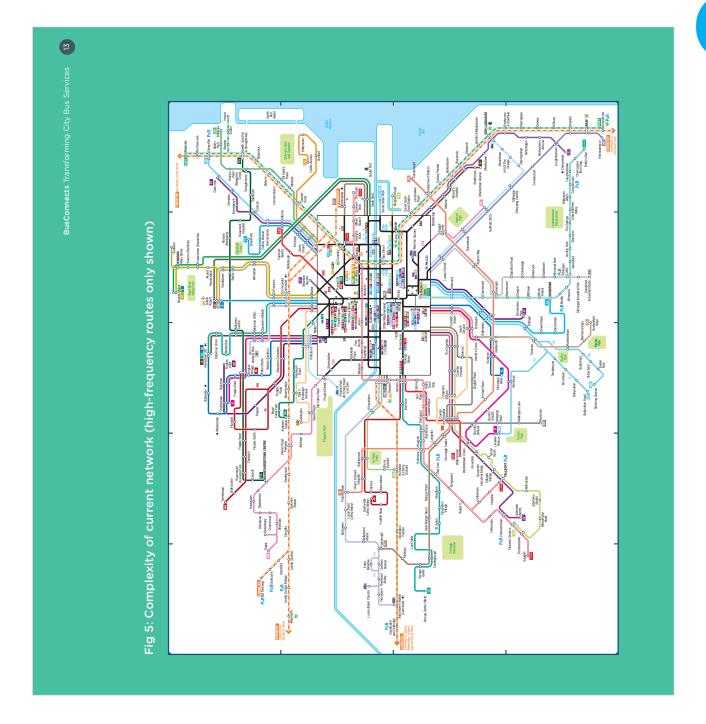

We want to move towards a system that minimises the overall period of time needed for most journeys and focusses transfers onto high frequency routes, cutting down waiting and journey times.

While much has already been achieved by Dublin Bus in making the network more efficient, the bus system across the Dublin region has the potential to operate much more effectively than

it currently does. This will require a fundamental reconfiguration

of routes and services.

Under **BusConnects** we are undertaking a major redesign of the bus network. As part of this we will establish exactly what people want from their bus service; where they want to go and when they need to get there. In a process of extensive consultation, we will figure out the best way to apply the wide array of resources we have available to us: infrastructure, fleet, staff, road space, subvention funding, etc, in a way that not just meets the expectations of the travelling public, but actually makes shifting to the bus an attractive proposition for more and more people. The proposals that come out of this process are likely to be radical and transformational.

"Currently over 70% of fare payments are made by Leap card."

## Fares and Ticketing Systems

Without changing the ticketing systems and the bus fares structure, the overall project would not deliver the full benefits that are possible under this transformation.

The second biggest source of bus delays, after traffic congestion, is the payment process at bus stops. Payment of fares by cash is still commonplace, slowing down the boarding time. Even when using the Leap Card, the complexity of payment stages means a high percentage of passengers have to interact with the driver, with resultant delays at bus stops. At busy bus stops these delays can be for several minutes. Multiply by the number of busy stops on a route, and those delays accumulate to add significantly to the overall journey time.

Under **BusConnects** we will simplify and streamline the process of paying for bus journeys. We want to make the fare system simpler, and we also want to make movement between different bus services seamless and easy, without financial penalty. This

will require a move to either a "tag-on" and "tag-off" facility, similar to Luas and DART, or a single "flat fare" approach in order to reduce the need to interact with the driver for fare payments.

As part of this process, cashless operation will be introduced on all buses, to remove the delays caused by cash payments. Currently over 70% of fare payments are made by Leap card. As this increases over the next couple of years, the transition to a cashless regime will become easier.

BusConnects will incorporate the latest developments in account-based ticketing technology, potentially allowing use of credit / debit cards or mobile devices as a convenient means of payment. This will also allow integration with other transport payments such as parking facilities and bicycle hire.

15

**BusConnects** Transforming City Bus Services

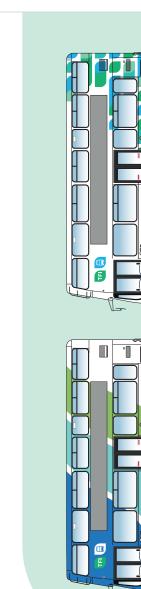

Fig 6: Sample Bus Livery Designs

### **Bus Livery**

Legislation requires that the National Transport Authority "shall for the purposes of promoting public transport, design, develop and secure the implementation of a single brand to be used by all public transport operators providing services in accordance with a public transport services to transport the Authority."

Under BusConnects we are proposing a new, fresh and modern look for the bus system by introducing a redesigned bus livery, which is the painted exterior of the buses. As well as reflecting the overall ambition of transforming the bus system, this will also accommodate the potential of additional operators providing bus services as part of overall network.

We will ensure that the new bus livery is attractive and conveys the image of a modern, effective transit system. We will seek people's views on potential designs before a final bus livery is selected.

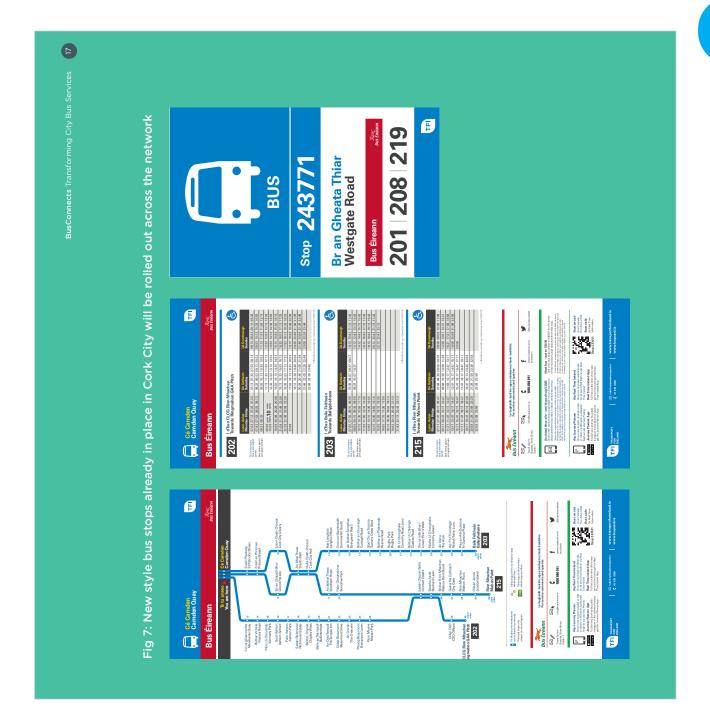

### **Bus Stops**

Roadside facilities and roadside information are essential components of a modern bus system. Across the region, the current facilities do not reflect the standard needed to make the overall system attractive and easy to use.

Under BusConnects we will introduce a new style of bus stop to be rolled out across all bus stops in the Dublin region, with better route and fare information provided in each case and with timetable information specific to each stop. All operators will adopt this style and the current assortment of poles at multioperator stops will be removed.

We will install more Real Time Passenger Information (RTPI) signs along the new bus corridors and elsewhere across the region, providing accurate next-bus arrival information.

Bus shelter provision will be significantly expanded as part of the BusConnects plan. A large number of additional bus shelters will be provided in new locations, particularly where connecting services are being provided.

"Complete transition to lowemission vehicles will begin in 2018."

### Low Emission Vehicles

Tackling the challenges of climate change is a national priority. **BusConnects** will contribute significantly to that objective.

Moving people from cars onto sustainable transport is essential in reducing CO<sup>2</sup> emissions and addressing congestion. In addition, we intend to transition to a fleet of low emission vehicles, further enhancing the environmental contribution of the bus system.

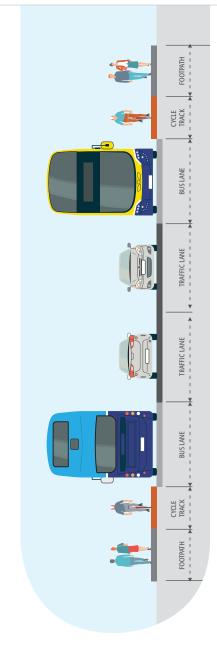

The exact low emission technology remains to be determined. Research is currently on-going into electric bus solutions, with the technology evolving rapidly and several manufacturers now bringing different vehicle options to market. Compressed natural gas / biogas are relatively mature technologies which are now extensively available to bus fleets.

As part of the **BusConnects** project, a decision on the optimum fleet technology will be made by the end of 2017, and either a single technology or a combination will be selected. A fleet acquisition plan will be developed to transition the bus fleet to low emission vehicle types, with the first vehicles under that strategy to go into service during 2018.

By 2023 half of the bus fleet, approximately 500 buses, will be converted to low emission vehicles. Full conversion will be

completed by 2030.

**BusConnects** Transforming City Bus Services

### Cycling facilities

The implementation of "next generation" bus corridors as part of **BusConnects** doesn't just address the bus requirements along those routes – it also allows the creation of a "next generation" network of cycling facilities.

The major bus corridors also represent the major cycling arteries for the city. The reconstruction of these roads to provide the essential bus lanes that are needed for BusConnects also provides the opportunity to similarly transform the cycling infrastructure.

On each of the Core Bus Network corridors, we will provide high quality cycling facilities, segregated from the bus lanes and general traffic lanes as far as is practicable. When implemented, this will mean that inexperienced cyclists, as well experienced cyclists, will be able to use these routes safely. A typical planned layout is shown above.

This benefits the bus system as well. It avoids cyclists sharing bus lanes with buses, where the bus speed can be limited to the speed of the slowest cyclist in the lane, and removes many of the conflicts that bus drivers have to deal with.

Accordingly, the implementation of BusConnects will also see the delivery of a network of key cycle routes, which form the foundation of the overall cycle network that has been planned for the Greater Dublin Area.

**BusConnects** Transforming City Bus Services

## Park and Ride Facilities

Maximising the potential of the BusConnects project means enabling more people to use the bus services instead of private cars.

a park and ride arrangement, where they can make part of the journey by car, then leave the car in a dedicated car park and For those travelling longer distances, the optimum strategy complete the journey by bus.

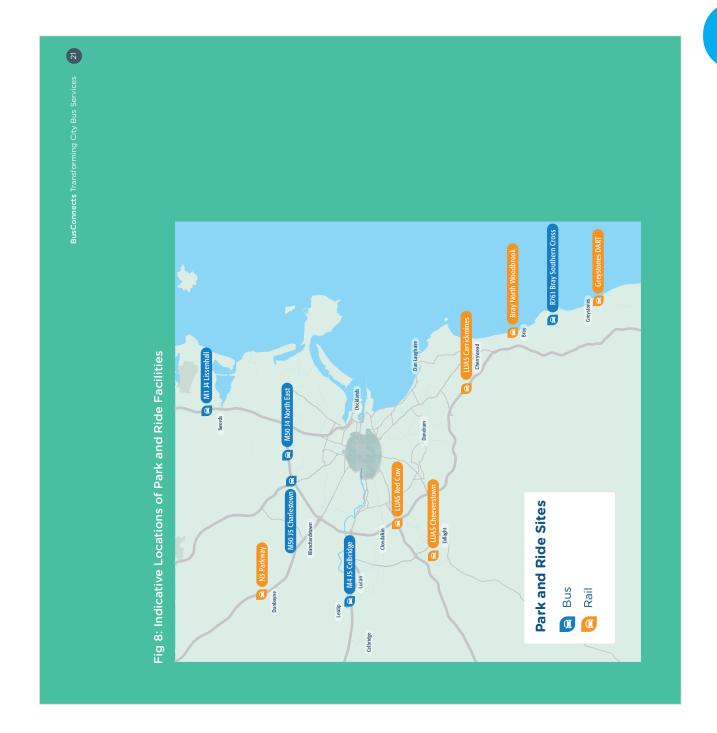

be just outside the area of congestion and conveniently located successfully. Ideally, the location of the parking facilities should Bus-based Park and Ride needs careful siting of the car parks, coupled with a high frequency of bus service, to operate or car users on the particular corridor.

As part of BusConnects, a network of park and ride facilities will Indicative locations are shown in Figure 8 - these will be subject be developed at key locations along the radial road network. to more detailed assessment as part of the project's delivery and may change. Additional locations may be added.

At each location, we are planning a high frequency bus service, supplementary services are needed to ensure a comprehensive primarily availing of the redesigned bus network. Where operation, these will be provided.

<u>.s</u>

Parking charges and bus fares will be integrated, ensuring a seamless connection between the parking facility and the bus system.

# Overall Benefits

**BusConnects** is a plan to transform Dublin's bus system so that journeys by bus will be fast, reliable, punctual, convenient and affordable. It will enable more people to travel by bus than ever before, and allow bus commuting to become a viable and attractive choice for employees, students, shoppers and visitors.

### For passengers BusConnects will deliver:

- reliable and punctual bus services;
- faster journey times for passengers;
- comfortable, modern vehicles;
- high frequency service on busy routes;
- an easy to understand network;
- universal passenger information at roadside, on apps and on vehicles;
- simpler fare structures and easier payment; and
- seamless integration with other transport types.

### For businesses **BusConnects** will:

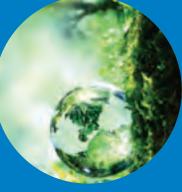

- by improving transport, make Dublin a more attractive location for employers;
- increase potential employment catchment areas by providing new transport links;
- reduce commuting time for employees; and
- reduce car congestion and enhance the attractiveness of urban centres for shopping and social purposes.

### For the environment BusConnects will:

- enable more people to use sustainable transport;
- transition the bus fleet to low emission vehicles;
- assist Ireland to meet its climate change targets; and
- provide a greener transport system for everyone.

### **BusConnects** will: For cyclists

• provide safe cycling facilities, largely segregated from other traffic, along these corridors; and routes into the city centre;

• deliver a step-change in cycling facilities on the key radial

provide the opportunity for more people to cycle to work, school, college or for recreational purposes.

### BusConnects will:

- ensure a simpler and more understandable bus transport
- enable easy use of the bus system, without the need to
- reduce the impacts of traffic congestion in urban centres.

**BusConnects** Transforming City Bus Services

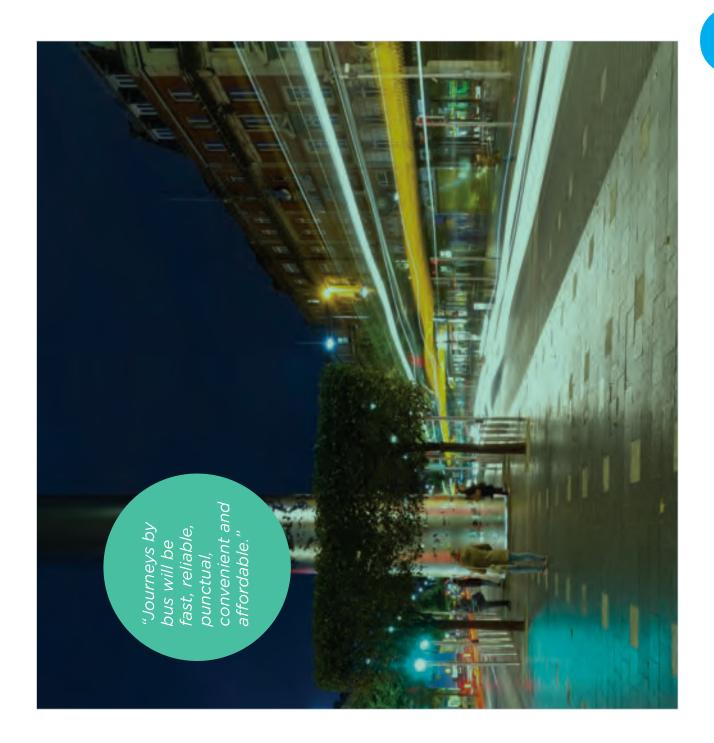

# Costs and Delivery

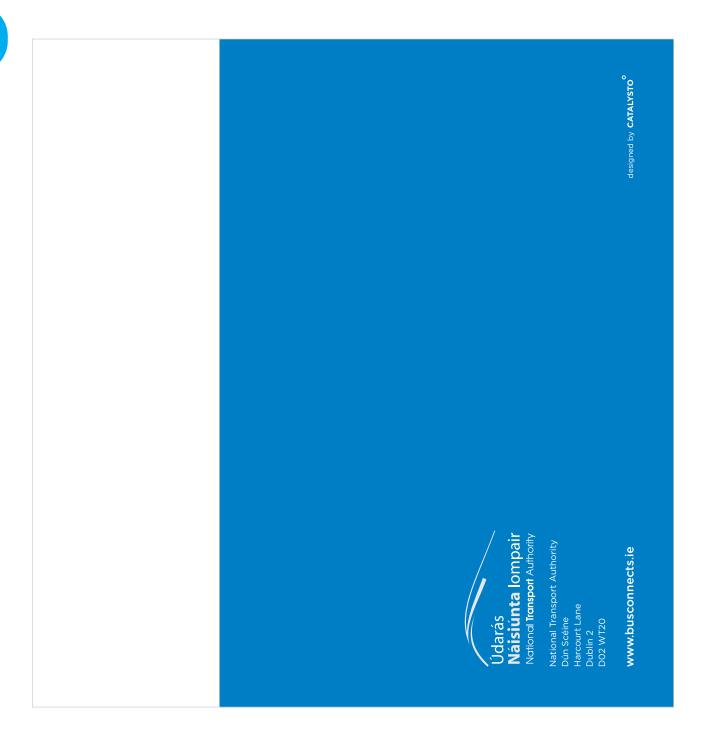

Transforming the bus system requires investment. Delivering all of the elements of **BusConnects**, inclusive of bus lanes, BRT and ticketing systems, will cost over €1 billion. The exact cost will be finalised when the designs of the various components of the project have been progressed.

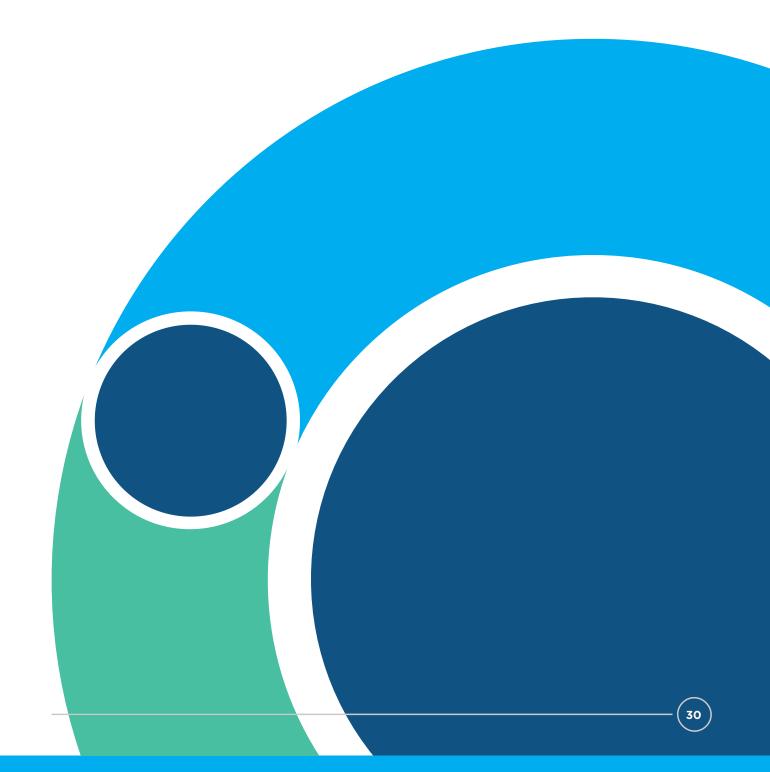

Delivering **BusConnects** will take a number of years, with the exact time period dependent on the level of funding each year.

But implementation can start quickly. The bus network redesign is already underway and the rollout of the revised network can commence in 2018. Early stage engineering designs have been advanced on some of the Core Bus Network corridors and on the BRT routes. Following receipt of planning consent, construction of each of these corridors could be completed over two to two and a half years, with several of the corridors able to be constructed concurrently.

Other elements of the overall **BusConnects** project can also be quickly progressed subject to the availability of the necessary funding. With sufficient investment and subject to the appropriate planning approvals, the benefits of the **BusConnects** project can start coming on-stream from 2019.

BUS CONNECTS Outcomes BusConnects will deliver a transformation of the bus system in Dublin It will provide a real choice for thousands of people – a fast, reliable bus journey versus traffic delays and congestion With continuous bus lanes, journey times on many bus routes will reduce by a third or more. More importantly, those times will be reliable and people can plan their bus journey with confidence The redesigned network will connect more people to more places BusConnects delivers across the whole region – not just focussed on one corridor For cycling it delivers the most important sections of the planned cycle network, providing high quality, safe, largely segregated cycling facilities It transitions Dublin from a congested city with inadequate public transport to a city with a modern, efficient and effective bus system providing a world-class bus transport service.

Thursday, 24th May – You are cordially invited to attend the launch of the NTA's "BusConnects" strategy on Monday 29th May in the Irish Film Institute located at 6 Eustace Street in Temple Bar. The Minister for Transport, Tourism and Sport Shane Ross TD will launch "Bus Connects" alongside the CEO of the NTA, Anne Graham. The launch event will feature opening remarks, a video presentation of the new strategy and a short Q&A session.

#### ENDS/

#### Press Release issued on 29th May 2017:

#### PRESS RELEASE

#### BUSCONNECTS CAN INCREASE BUS PASSENGER NUMBERS BY 50% - NTA

Ambitious suite of initiatives will transform bus services in Dublin region

BusConnects, a suite of initiatives to radically transform public transport in the Dublin region, was launched today by Minister for Transport Sport and Tourism Shane Ross, and Anne Graham, Chief Executive Officer of the National Transport Authority.

The ambitious proposals will put bus services at the heart of the solution when it comes to addressing congestion in the capital. The total cost of BusConnects is estimated to be over €1b, some €300m of which is already committed under "Building on Recovery", the 2015 capital plan.

BusConnects proposals include:

- Next generation bus corridors
- Bus Rapid Transit
- Redesigning the network of bus routes
- State-of-the-art ticketing system
- Cashless fare payment system
- Simpler fare structure
- Refreshing the bus livery
- Rolling out new bus stops with better signage and information
- Cleaner technology

When there are so many better things we could be doing -

whether that's spending time with family, out with friends, going to a movie or a match - nobody wants to be stuck in traffic.

Anne Graham said: "Thanks to BusConnects, just about everybody will be able to beat the congestion by using the bus rather than a car, to get around.

"We believe that there is potential to increase bus passenger numbers by at least 50% over the lifetime of the project, which would represent a significant step-change in how people get from place to place.

"This can only happen if measures are put in place to make bus travel more convenient, more reliable and more appealing and we believe that BusConnects will do precisely that.

"In 2015, the Government's Capital Plan earmarked €3.6b for investment to progress public transport projects. These included Metro North, Dart Expansion to Balbriggan and Maynooth, Dart Underground, Luas Cross City and the Phoenix Park tunnel among others.

"As we approach the midterm review of the capital plan, a strong commitment to these projects remains. In fact Phoenix Park Tunnel is now operating very successfully and Luas Cross City is close to completion.

"But Dublin is a low density city which means that that very few areas of Dublin have the size and concentration of population to support rail-based public transport. For most areas, bus transport represents the best public transport solution.

"In any case, rail projects typically have lead-in times of 8-10 years, and with congestion continuing to worsen every month, more immediate solutions are required.

"That is why today, the plans we are publishing are primarily about investing in bus transport. They sit alongside our longerterm commitments to the rail corridors, and complement them. These solutions will generally have a much shorter turn-around time, which means that we can make travel by bus an increasingly attractive option for commuters all across the network, sooner rather than later.

"By investing in our bus services, we will make the city a better place, and a more attractive place to work, play or invest in."

Minister Ross said: "We have seen remarkable growth in our economy in recent years, and that recovery is continuing.

"That means more jobs, more people at work, more people out socialising, and more people visiting, all of which is to be welcomed.

"But it does place a strain on our transport infrastructure, and we've all seen the congestion in the city and across the region, that arises as a result.

"The proposals being put forward today can transform

Dublin's bus system in a fundamental way, so that when it comes to speed, punctuality, reliability and convenience, journeys by bus can be better than ever before.

"BusConnects will mean more people travelling by bus and will allow bus commuting to become a more viable and attractive choice for employees, families, students, shoppers and visitors.

"It will mean that using the bus rather than the car to get around, will make more sense for more people.

"And it will add to the energy, vibrancy and dynamism of a great city."

**BusConnects** Transforming City Bus Services

## 1. Introduction

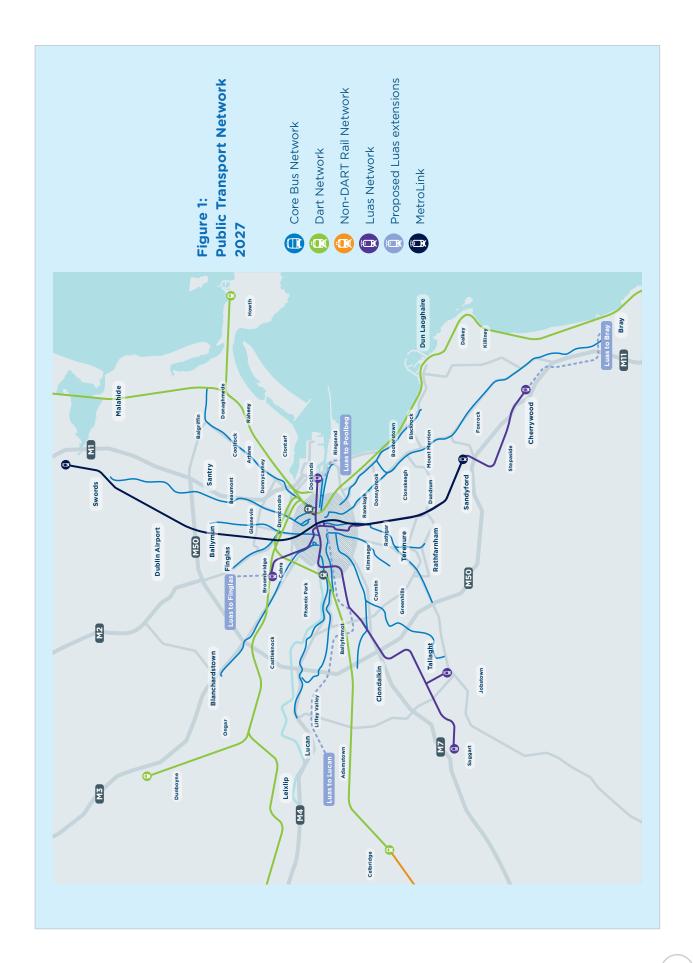

### .1 Overview

A major investment programme to improve public transport in Dublin is underway. The three major elements of that overall programme are:

- 1. The MetroLink project which is the development of a north-south urban railway service that will run between Swords and Sandyford, connecting key destinations including Dublin Airport and the City Centre along the 26km route;
- 2. The **DART Expansion Programme** will see the implementation of high frequency DART services to Drogheda on the Northern Line, Celbridge/Hazelhatch on the Kildare Line, Maynooth and M3 Parkway on the Maynooth/Sligo Line, while continuing to provide DART services on the South-Eastern Line as far south as Greystones; and
- BusConnects Dublin, a plan to fundamentally transform Dublin's bus system, so that journeys by bus will be fast, reliable, punctual convenient and affordable in addition to radically enhancing our cycling infrastructure.

Once completed this integrated public transport network will provide new opportunities for travelling. It will enable easier, more reliable and flexible travel across a range of modes. There will be new destinations for people. The network will facilitate new ways to get to work, education and leisure purposes. It will also ensure much quicker travel times than currently possible. Figure 1 shows the network of high capacity public transport corridors – bus, rail, metro and Luas – that will be in place in 2027.

This document is an update on the infrastructure aspects of the BusConnects Dublin project which is the building of a core bus corridor network. This consists of 16 radial core bus corridors, which will be supplemented at a later stage with a network of orbital corridors.

**BusConnects** Transforming City Bus Services

# What is BusConnects Dublin?

BusConnects Dublin provides the foundation to this overall transport system, with the revised bus system projected to carry the majority of passengers across the region and provide key linkages to serve the needs of Dublin into the future.

BusConnects Dublin aims to overhaul the current bus system in the Dublin region by:

- building a network of new bus corridors on the busiest bus routes to make bus journeys faster, predictable and reliable;
- O completely redesigning the network of bus routes to provide a more efficient network, connecting more passengers;
- developing a state-of-the-art ticketing system using credit and debit cards or mobile phones to link with payment accounts and making payment much more convenient;
- implementing a cashless payment system to vastly speed up passenger boarding times;

 revamping the fare system to provide a simpler fare structure, allowing seamless movement between different transport services without financial penalty;

 implementing a new bus livery providing a modern look and feel to the new bus system;

 rolling out new bus stops with better signage and information and increasing the provision of additional bus shelters; and Transitioning - starting now - to a new bus fleet using low emission vehicle technologies. BusConnects Dublin is a programme of integrated actions which, together, will deliver a bus system that will enable more people to travel by bus than ever before, and allow bus commuting to become a viable and attractive choice for employees, students, shoppers and visitors. Many of these initiatives are already underway including the core bus corridor project and the Dublin area bus network review.

But it is not just the bus system that will be transformed under BusConnects Dublin. The same corridors that are important for buses are also the main cycling routes into the city centre. BusConnects Dublin will see safe cycling facilities provided along each corridor, segregated as far as practicable from other traffic. The cycling infrastructure delivered under this programme will form the core of the region's cycling network and deliver a radical step-change in cycling facilities in Dublin.

## **Consultation Timeline**

Over the coming months we intend to undertake two major public consultations in relation to BusConnects Dublin. These are:

feedback and views as part of the Sept/Oct consultation process, when fuller details of the proposals are developed. While comments in relation to this document are welcome and can be submitted, there will be a full opportunity to provide comprehensive

July 2018:	Public consultation on the redesigned network of bus services. Work is on-going on redesigning the network of bus services that operate throughout Dublin. We want to redesign the overall network of bus services to allow more people to get to more places in a shorter time than is the case at present. Plus we want the network to be simpler and easier to use. A report setting out proposals for the revised system of bus routes will be published and feedback sought.
Sept/Oct 2018:	Public consultation on the bus infrastructure proposals – the bus lane project for the radial Core Bus Corridors identified later in this document. It is intended that fuller details of the various corridors will be developed and made available as part of this consultation process.

# 2. Growing Congestion

## 2.1 Congestion Issue

Ireland continues to emerge from the severe economic recession of recent years and the associated high levels of unemployment that existed during that time. The economy is growing strongly; more and more people are at work; the number of visitors to the country is at record levels. Alongside the recovery, however, are growing challenges, with traffic and transport among the key issues facing the Dublin region.

During the recession transport levels fell dramatically due to factors such as reduced business activity, people spending less money, emigration and unemployment. Travel in and out of Dublin City Centre each morning (7am to 10am) dropped from 207,379 people in 2006 to 181,042 in 2010, a decrease of 13%. Overall numbers using bus fell by 16% while rail passengers decreased by 30%. As well as reduced public transport usage, the number of cars and commercial vehicles on our roads also decreased. Congestion during this time was less and travel times became shorter as the roads had fewer vehicles using them.

Now in 2018 that position has changed dramatically. Traffic levels have grown steadily since the economy began to recover and congestion is now one of the most significant challenges facing the region. It is predicted that the population for the Dublin region will grow by 25% by 2040, bringing the population to almost 1.5 million in the region.

# Forecast Population Growth in Dublin Region

## 2.2 Impact on Bus Travel

Congestion impacts many aspects of people's lives negatively, and without intervention it will continue to diminish people's quality of life while also putting economic growth at risk.

From the perspective of public transport, congestion is a major problem. On the busiest bus routes, bus lanes are only in place for less than one third of the corridor. This means that for most of the journey, buses are competing for space with general traffic and so are also affected by the increasing levels of congestion.

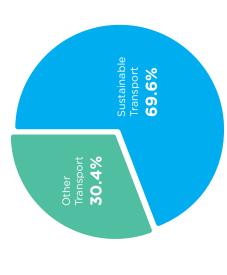

As a result, whereas bus journeys should be fast, reliable and predictable, the increasing impact of congestion is undermining that objective. Additional buses are being added to the system simply to compensate for delays in journey times. So, where a bus could complete a route journey in 90 minutes during peak hours and return after a short turnaround, that journey is now taking longer and an additional bus and driver is needed to provide the return leg in order to maintain the timetable of services.

More people are now travelling into Dublin City Centre each day than ever before. In 2017, a total of 211,000 people crossed the "canal cordon" to access the city centre during the 7am to 10am morning peak. This is higher than during the 'Celtic Tiger' boom years, and the numbers are increasing year on year.

The means by which people access the city centre has changed over the last decade. Now 70% approximately of people travelling into the city each morning do so by sustainable transport- walking, cycling, bus, rail or luas. Cars only account for 30% of travel.

Of these numbers entering Dublin City each day, the majority use the bus for this journey. As those numbers grow, and as congestion worsens, it is becoming increasingly difficult to operate a reliable bus system with sufficient capacity to cater for the needs of the region.

# Canal Cordon average daily trips

Sustainable transport: Bus, Rail, Luas, Taxi, Walk, Cycle Other transport: Car, Goods Vehicles, Motorcycles

**BusConnects** Transforming City Bus Services

# 2.3 Why is the bus system important?

The bus system is important because, simply put, it is the main component of the solution to address our current congestion problem and to meet our future transport needs. As Dublin is a low density city there are few areas with the size and concentration of population for railbased public transport. This means that for most corridors in Dublin, bus travel represents the optimum form of public transport.

Dublin Bus carried 137 million passengers in 2017. When combined with Bus Eireann commuter services in the Dublin region, 143 million passengers were carried on State operated bus services in the Dublin area, compared with 38 million on Luas and 33 million passengers on the DART and rail commuter services.

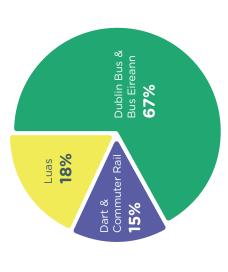

In percentage terms, the bus system accounts for over 67% of public transport passenger journeys in the Greater Dublin Area. That means that whilst the bus carries two thirds of all public transport passengers,the Luas carries 18% and DART and commuter rail services deliver the remaining 15%.

In terms of geographical reach and coverage, bus operations extend across every corridor in the Dublin region. Luas operates only two fixed lines - Red and Green and rail services are limited to four railway services - Kildare, Maynooth, Northern and South-eastern lines.

Because of its regional coverage and its flexibility, the bus system is, and will continue to be, the main form of public transport for most people across the Dublin region. It is the backbone of public transport services and carries multiples of the numbers of passengers carried by Luas and DART/Commuter Rail.

As such the bus system is the foundation for the future of Dublin's public transport service. It is vital that we invest now in ensuring that it can properly perform this role into the future.

# Percentage of passenger journeys per mode in the Dublin Region

# 3. Details of the Core Bus Corridor project

### 3.1 Overview

The focus of this part of the BusConnects Dublin programme is the delivery of the Core Bus Network, the bus lanes that are needed to make the bus system operate efficiently, reliably and punctually. Our intention is to develop these bus corridors so that each will have continuous bus priority – in other words, a continuous bus lane in each direction. This will remove the delays currently being experienced, which will grow worse as congestion increases, and allow the buses to transport their many thousands of passengers with greater certainty about the arrival times to their destinations.

Our plan is being developed using all available data and forecasting to understand past trends and events. It takes into consideration the current situation and the challenges and opportunities that Dublin will face over the coming decades. Projections of a future without BusConnects Dublin clearly indicate that journeys times will continue to erode and congestion will worsen. The following outlines the plans to vastly improve and enhance the travelling experience of bus users and cyclists.

TRANSFORMING CITY BUS SERVICES

### Figure 2:

- 12. Rathfarnham to City Centre 13. Bray to City Centre
- 14. UCD Ballsbridge to City Centre
  - 15. Blackrock to Merrion
- 16. Ringsend to City Centre

## 3.2 What a typical layout will achieve

Overall, the proposal envisages the provision of about 230 kilometres of bus lanes on sixteen of the busiest bus corridors in Dublin, which we refer to as "Radial Core Bus Corridors". These corridors are shown in Figure 2.

In addition to the radial core bus corridors, there is also a plan for enhancement of the orbital bus corridors as part of BusConnects Dublin. These proposals will form a separate plan which will be advanced at a future date. The proposed orbital routes are shown in Figure 3.

Our objective is to provide a continuous bus lane in each direction as well as maintaining two general traffic lanes. In addition, we also want to provide a dedicated cycle track on each side of the road, providing safe cycling facilities, segregated from other vehicular traffic. The typical road layout also includes footpaths for pedestrians and supporting elements such as pedestrian crossings at all key road crossing points, and bus shelters for waiting passengers.

The typical road layout that we want to achieve on these radial core bus corridors is set out as shown in Figure 4.

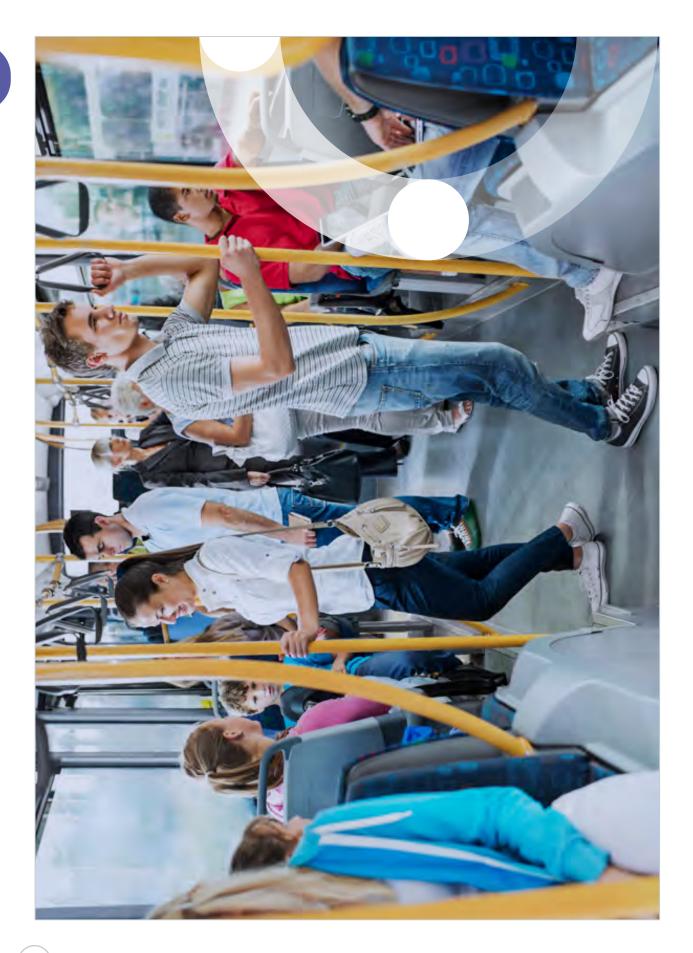

However, this typical road layout is difficult to achieve in practice and the next section sets out the challenges that we face in trying to implement this layout. Further information on the difficult choices that have to be made are included in the preliminary route maps detailed in the Appendix.

Figure 3: Future Orbital Bus Corridors

**Figure 4: Typical Road Layout** 

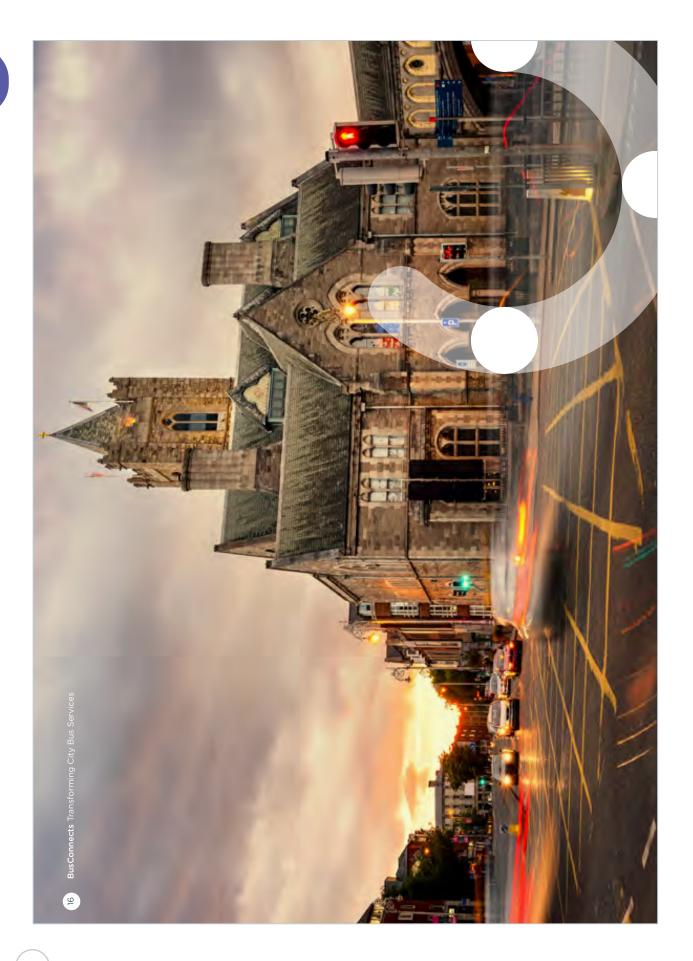

15

## 3.3 Preliminary route maps

The Appendix to this document provides preliminary route maps for the sixteen Radial Core Bus Corridors. These maps set out a preliminary proposal for each of the bus corridors, together with some of the key impacts, issues and challenges that relate to the particular corridor. All of the routes and options are indicative only at this stage.

Without the transformed road infrastructure, the bus system will deteriorate in performance. Growing congestion will mean that bus journeys will take longer and become more unreliable. It simply will not be a realistic alternative for many people and will not provide the capacity to transport the many thousands of extra passengers that it will need to move each day to deal with the growing traffic congestion problems of the region.

As detailed in Section 1.3, there will be a formal public consultation phase later this year seeking feedback and comments on the emerging proposals.

## 4. The Challenges

It's important to acknowledge that the choices required making needs to be done now and not postponed until to deliver this step-change in the performance of the the problem is far greater. Some of the decisions may be hard but they are being made because we believe in these plans and in their potential to fundamentally transform the way public transport works in Dublin. bus system will be difficult. However, the decision-

evolved over centuries dating back to the Viking era. Needless to say the to travel in and out of the city each day. Some of the city's inner suburbs streets were not designed to move the number of people that now need date back to Victorian times, with road layouts designed for far more Dublin is a medieval city. Its streets and roads have developed and modest levels of traffic than we see today. It could never have been envisaged over the centuries, that Dublin would become the metropolitan city it is today and that hundreds of thousands of people would be moving through the city centre on a daily basis.

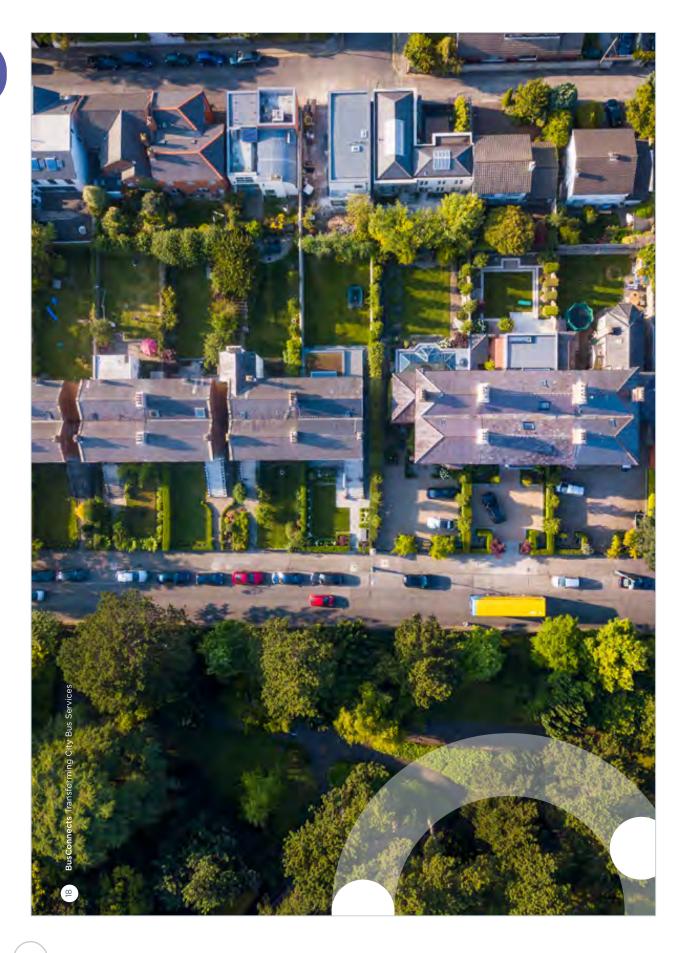

providing a fit-for-purpose bus system, built on a streetscape that dates back centuries. That means difficult decisions will have to be made. Our challenge now is to respond to the needs of a modern city by

- Will we need to widen roads?
- > Will we have to convert current traffic lanes to bus lanes?
- Will we need to restrict on-street parking?
- Will we need to remove trees or parts of front gardens?

The answers to the above questions will be yes. These are tough choices there are no longer any simple changes which we can make that would which cannot, and will not, be made lightly. Not all the impacts will be Over the years modifications that were easier to implement - the ones felt equally and some locations will require more changes than others that caused little or no disruption - have been made. This means that generate meaningful benefits.

upgraded to meet the future demands that are going to be placed upon it. which carries over two-thirds of Dublin's transport passengers, has to be to grow and flourish into the future. Quite simply, if we genuinely want to put in place a much better public transport system, our bus system, So we now need to make significant changes if we are to allow Dublin

If we decide not to make these changes now, then we need to accept that Dublin will become increasingly congested and a less attractive place to live and work, both for us and for future generations.

### 4.1 Likely impacts

### Traffic movement

By creating more priority for buses and cycling there will be changes to how traffic currently moves around the streets. Some roads may become one-way, new bus-only sections will be introduced and in some places general traffic will have to take new routes in and out of the city. Additional cycle routes which will be built, generally segregated from vehicular traffic and pedestrian crossings will be added and moved in some areas.

### Acquisition of Parts of Gardens

Because there is so little unused space along these busy roads, it will often not be possible to accommodate the bus lanes and cycle lanes in the width available. In order to achieve the required space it will be necessary, in places, to acquire parts of front gardens and land in front of commercial properties to allow the bus and cycle lanes to be provided. This would require rebuilding new garden walls a short distance back from the existing road boundary.

### Reduction of On-Street Parking

Because the roads we are widening travel through residential and business areas there will be a need to reduce the amount of on-street parking to accommodate the new layout.

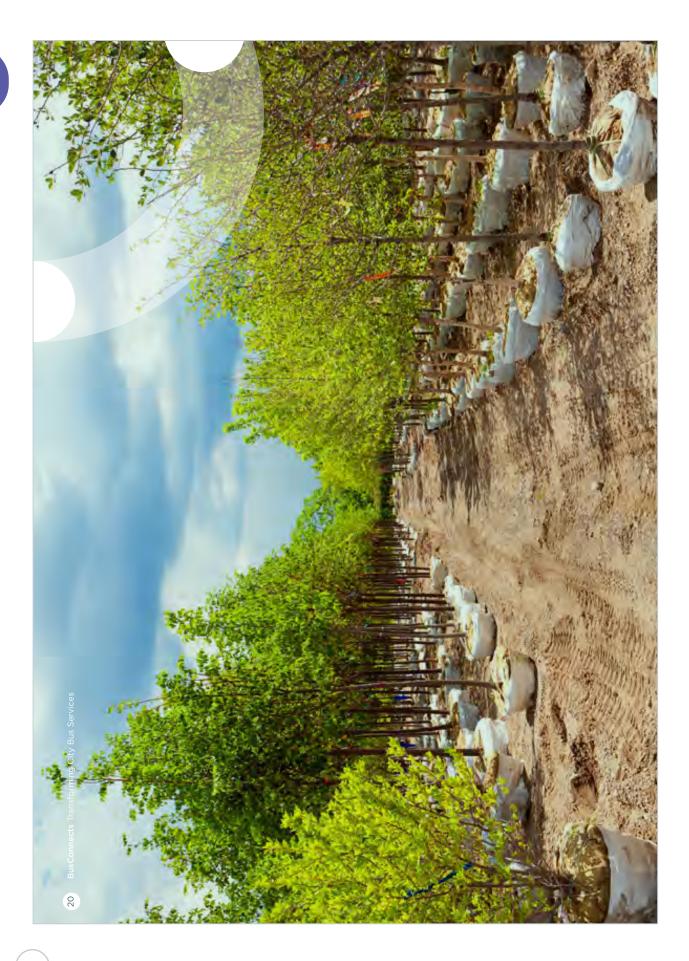

### Removal of Trees

As with the need to remove some parts of front gardens and footpaths, there will be also be a need to remove trees along some of the corridors. The Public Consultation stage later this year will have details and locations of the trees and lands impacted, once the initial designs are developed.

### Road Works and Construction Sites

Widening roads, and building bus and cycle lanes, requires a certain amount of construction work. There will be excavation of the existing roads, plus parts of gardens and footpaths where needed. There will be resurfacing, kerbing, replanting and landscaping. During the construction stages, the construction sites will be localised and managed on a road by road basis. As with any work site and road works, there will be a certain level of noise, dust and temporary traffic diversions.

The size of each work site and the hours of working will have to take into consideration the residential nature of many of the roads. Traffic management will be very important to keep the traffic moving and ensuring local access for people and deliveries is always maintained.

## 4.2 Our plans to mitigate those challenges

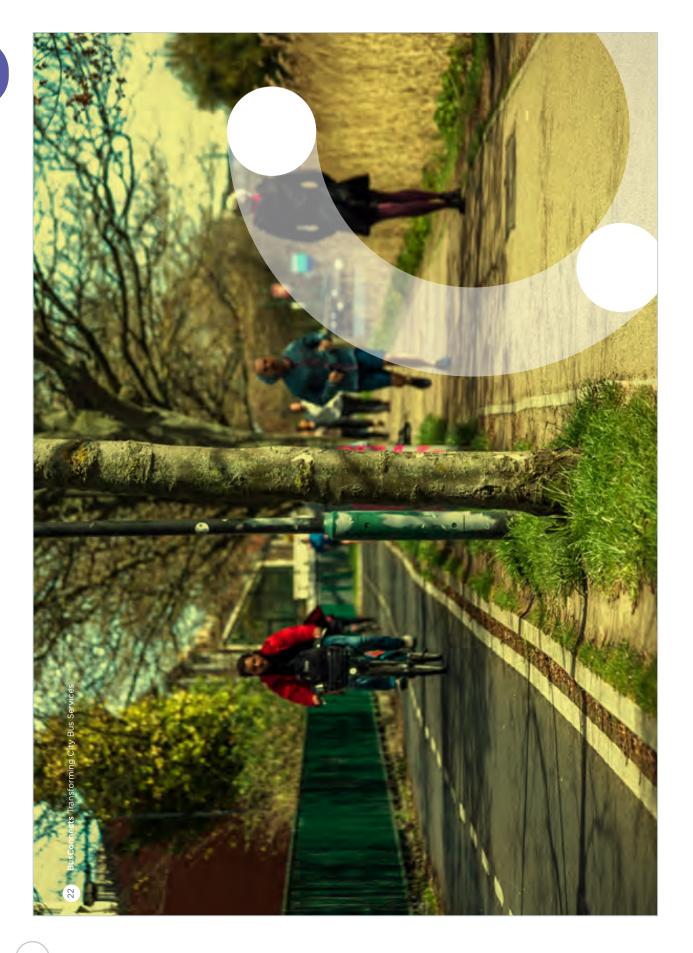

Obviously these challenges and impacts are significant. Some roads will be impacted more than others. Some of the impacts will mean different things to different people depending on where they live and their homes. We are in no way underestimating or making light of the issues people will face, and that is why we are stating them clearly at this early stage.

Every feasible option will be looked at to minimise the disruption to people, their properties and the wider local community. Where there is simply no viable alternative, and where we know we have to remove trees, parts of gardens or parking, we will ensure appropriate mitigation measures are put in place, wherever practicable.

A defined set of guidelines and principles for mitigation, compensation and reparation will be developed in advance of planning permission being sought. Below are some of the measures that we envisage will be included. This list is not exhaustive and we anticipate that there will be other concerns.

Where lands, such as parts of gardens, are being acquired for widening – we will purchase the portion of front gardens from property owners; ensure new landscaping and replanting of the gardens as well as providing compensation for the garden portion loss and disruption.

- Where trees are removed from roadsides and footpaths we will put in place a comprehensive replanting programme. This programme will use mature or semi-mature ready-grown trees where appropriate and, where it is feasible, plant them as close as possible to the original locations.
- Where there is a loss of on-street parking or private parking space we will seek to provide, where feasible, alternative parking close by for residents and businesses.
- Where private and public walls or fencing are removed we will rebuild new garden walls and replace fencing where gardens have been affected and shortened. Also, where public or commercial walls and fencing have been taken they will be rebuilt and replaced.
- We will look for areas along the busy corridors where it is possible to improve the existing local spaces and the existing landscaping. It is important to use this opportunity to not only replace what is removed but to enhance the local areas. To do so, we will provide funding support for urban centre improvements and creating attractive local environments.
- Where traffic is diverted and re-routed, adequate signage and road markings will be provided for people to find their way. Also, local access will be maintained where new bus-only sections or one-way systems are brought in for residents and commercial properties.

### 5. The Benefits

## 5.1 How will this plan benefit cyclists and pedestrians?

This plan is not just about buses, in fact, this plan will provide much needed cycling facilities and make it easier and more attractive to cycle around the city region. Given the increasing number of cyclists across Dublin there is an imperative to provide safe and segregated cycling facilities where possible.

The major bus corridors across Dublin city are also the main cycling arteries. The widening of these roads for bus lanes provides the opportunity to transform the cycling infrastructure at the same time.

On each of the 16 radial core bus corridors our objective is to provide high quality cycling facilities, segregated from the bus lanes and general traffic lanes as far as is feasible. We calculate that over 200kms of cycle tracks/lanes will be either built or current lanes improved upon. A better cycling network is good for all transport users. It avoids cyclists sharing bus lanes with buses and will remove many of the conflicts between buses and cyclists. This initiative is the foundation of the overall cycle network that has been planned for the Greater Dublin Area.

In addition, we will also use this unique opportunity to make a better environment for pedestrians as we improve these corridors. In particular, we will improve the quality of footpaths and pedestrian crossings as well as improving pedestrian facilities at junctions. We will also enhance key local centres with additional landscaping and outdoor amenities.

24 BusConnects Transforming City Bus Services

### 5.2 Journey Time Savings

In 2017 almost 13,000 people took part in a survey regarding the current bus network and services. Of those who took part the most important goals for public transport for them are – reduce the dependence on private cars, limit traffic congestion and make the city an attractive place to live and work. These things clearly matter to people and how they value their quality of life and use of their time. These goals can be achieved by providing dedicated bus lanes to ensure punctuality, reliability and increased frequency of services.

The core bus corridor project will deliver journey time savings of up to 40-50% on each corridor. With the implementation of BusConnects Dublin people travelling on these routes will reach their destinations much faster than they currently do. Just as importantly, they can have greater certainty about when they will arrive at their destination, because their bus will no longer be affected by general traffic congestion. However, the future without BusConnects Dublin will see a significant deterioration in journey time; people will spend more time stuck in traffic and take longer to get to their destinations.

Future Journey Times without BusConnects

Journey Times

**BusConnects** 

journey time savings

up to 40-50%

Current Journey Times

The core bus corridor project will deliver on improving journey times and creating certainty and confidence in the bus system. Improving the current journey times on the key bus corridors will make bus travel more attractive, will improve the efficiency of the services and give people the reliability of knowing exactly how long their journey will take.

The most important goals for public transport:

"Reduce the dependence on private cars"

"Make the city an attractive place to live and work"

"Limit traffic

congestion"

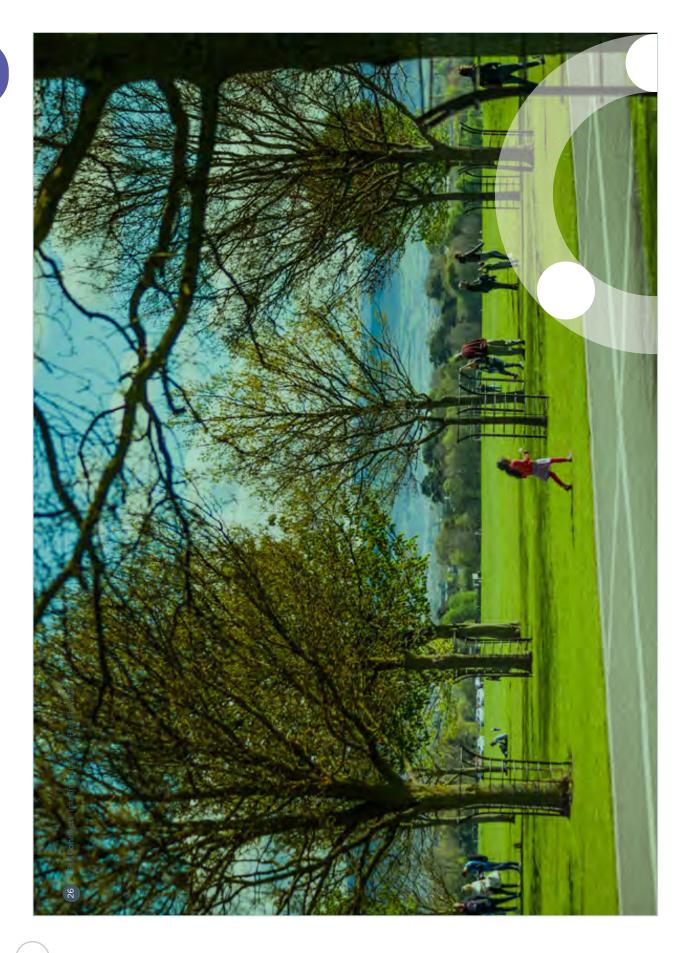

## 5.3 Building a sustainable, living city for families and communities

BusConnects Dublin is about making travelling by bus a better option. By providing a high-quality, frequent and reliable bus service, we can make Dublin a more attractive place to live, work and visit.

With proper bus prioritisation measures in place, it will be much easier to provide a bus service that is quick and efficient, and that gets people where they need to be, with a minimum of stress. That means that for anybody that needs to get around the city, or from one part of Dublin to another, taking the bus will make more and more sense.

With quicker journeys and services whose reliability is not undermined by traffic congestion, the city will seem like a smaller, more accessible place and everywhere will be within an easy bus ride of just about anywhere else.

All of Dublin – all of its colleges, offices, retail streets; all of its coffee shops, old and new; all of its pubs and bookshops; all of its restaurants and theatres; all of its character – will be opened up, to all of its citizens and all of its visitors.

## 5.4 Taking seriously our climate change responsibilities

Tackling the challenges of climate change is a national priority and BusConnects Dublin will contribute significantly to that objective.

Already significant progress has been made in this regard and the days of buses spewing out black plumes of diesel exhaust are thankfully consigned to history. But more needs to be done to protect our communities from the harmful effects of gases and other emissions.

Moving people from cars onto sustainable transport is a key component in reducing CO2 emissions, in addition to addressing congestion with its adverse environmental impacts. But in addition to those beneficial impacts, we want to transition to a fleet of low emission vehicles, further enhancing the environmental contribution of the bus system.

Substantial research is currently on-going into electric bus solutions, with the technology evolving rapidly and several manufacturers now bringing different vehicle options to market.

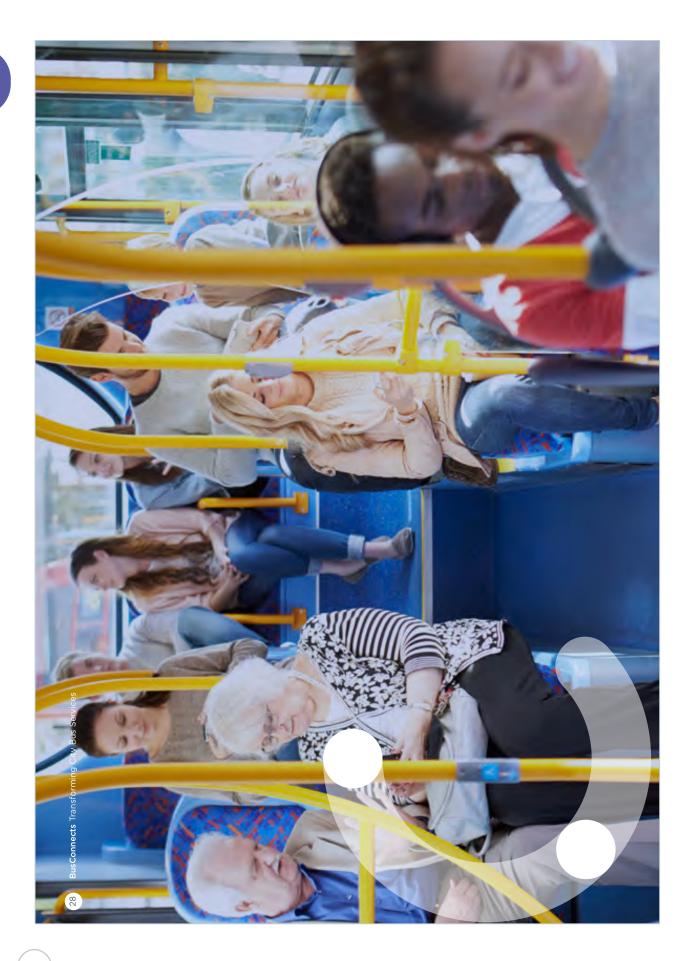

A fleet acquisition plan will be developed to transition the bus fleet to a low emission vehicle type (or types), with the first vehicles under that strategy to go into service very soon.

## 5.5 Supporting the economy and jobs

A well-functioning public transport system is a basic requirement for any metropolitan area that aspires to providing plenty of good employment opportunities for its people into the future. With bus, rail and trams, Dublin boasts some really great services but if we are to maintain our capacity as a city, a region and a capital, to continue to attract the best jobs and the best employers, we will have to do more, and urgently.

By improving the overall public transport offering, these proposals will make commutes shorter and more reliable, and will therefore make Dublin a more attractive location for employers.

It will also make it easier for people to get out and enjoy the city and all it has to offer, which is good news for businesses in the city centre and beyond.

### 6. Contact Us

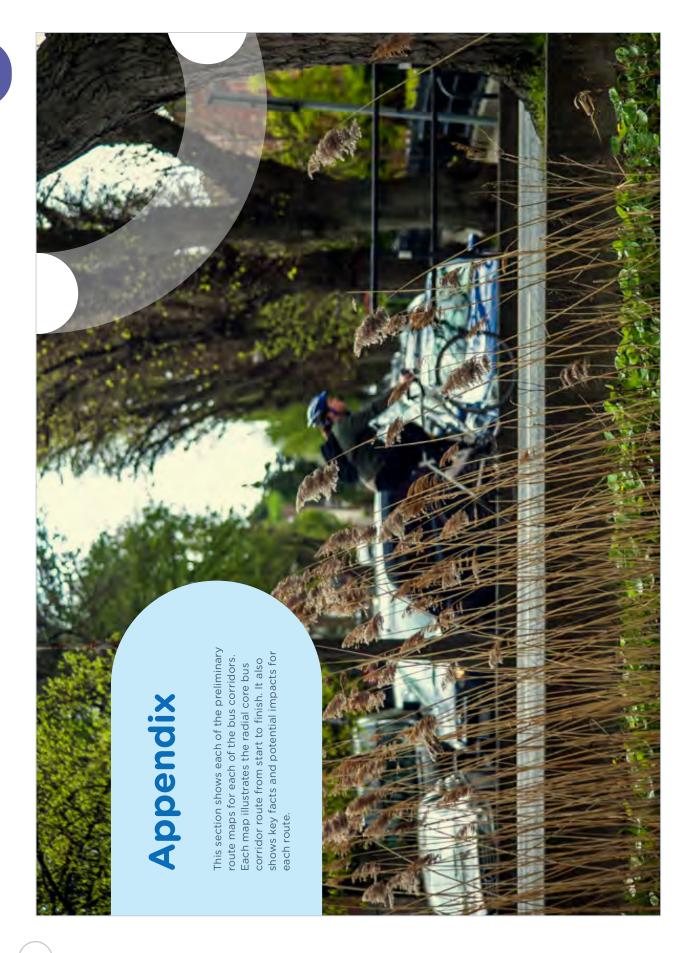

This document provides an update on BusConnects Dublin and the work being undertaken in planning the bus lane infrastructure which is at the heart of BusConnects Dublin. Please feel free to contact us for further information or queries you may have.

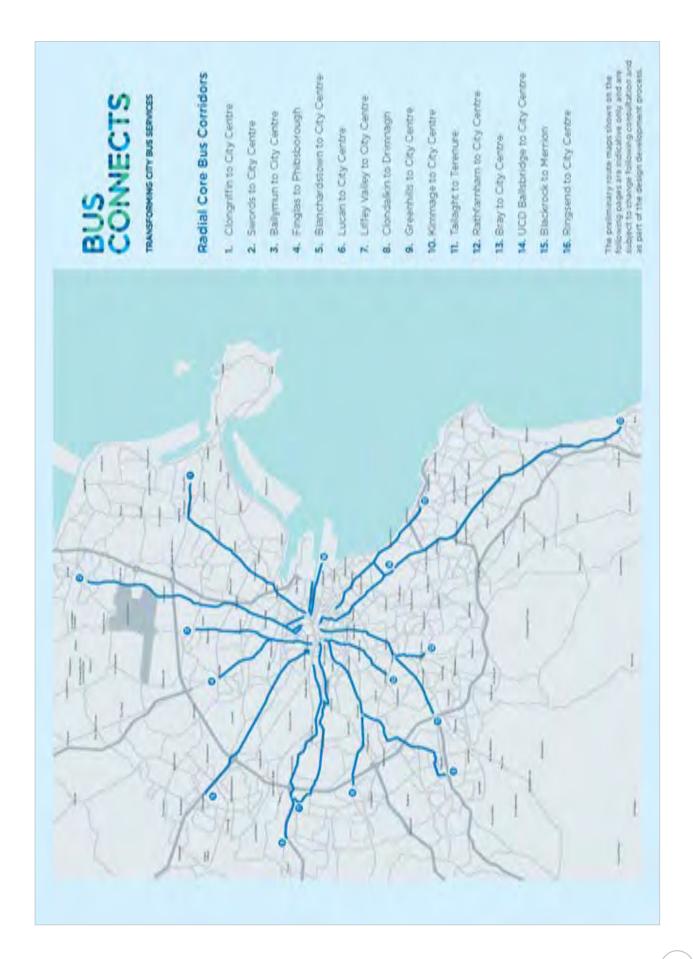

In relation to the individual corridors, work is continuing on assessing options and developing proposals which will be published for public consultation in September / October this year. Accordingly, more detailed information on the individual corridors will not be available until that later consultation stage.

The **www.busconnects.ie** website will provide regular updates as the project develops. In addition the email address is **info@busconnects.ie** and Freefone **1800 303 653.** If you would like to contact us by post or to receive printed copies of this document you can also write to us:

Core Bus Corridors Project Discussion Document Presentation by Anne Graham

### Copy of the presentation by NTA CEO Anne Graham when the Authority published the Core Bus Corridors Project Report on 12 June 2018.

1

Background to Core Bus Corridors Project

2016
GDA Transport Strategy

• In 2016, the N174's Transport Strategy for the Greater Dublin Area was adopted by the Government.

• The Strategy identified the need to "develop the Core Bus network to achieve, as far as practicable, continuous priority for bus movement on the portions of the Core Bus Network within the Metropolitan Area."

3

Busconnects

2018

NDP funding earmarked

Funding of (2b) was earmarked in the NDP under Project treland 2040.

BusConnects "will deliver a transformational redesign of the bus system in Dublin.

"It will comprise a network of 'next generation' bus corridors on the busiest routes with segregated cycling facilities."

Busconnects Doblin is part of a major public transport 1.0 year investment programme. That programme also includes:

- Dart Expansion Programme which will see the implementation of high-frequency Dart services on the Northern Line, the foldine Line, and the Maymooth Line:

- MetroLink, a largely underground rail link between Swords and Sandyford, serving the airport and the city centre.

This integrated public transport network will provide new opportunities to enable and provide new opportunities to enable and provide new opportunities to enable and across a range of modes.

Condation to Directe

Why invest in bus?

More people choosing bus transport

More people than ever – almost 70% are travelling into Dublin using
sustainable modes.

Within that, bus is the most popular
mode of sustainable transport in Dublin,
and getting more popular.

In our recent cordon count report, bus
accounted for 56% of all public transport
trips.

The snap-shot report counted all
journeys into the city centre during the
morning peak time.

9

Bus trends — annual passenger demand

--
Bus is clearly the most popular mode of public transport in Dublin, and its getting more popular.

--
Overall last year Dublin Bus provided the largest ever number of passenger journeys at over 136m.

--
This represents an increase of almost 9% over 2016 and represents four straight years of passenger growth.

--
In other words, demand for bus services is strong and getting stronger.

--
That is why we need to make sure the bus infrastructure is up to the job

What will our Core Bus Corridors look like
Layout

Optimum layout

The proposal envisages the provision of about 230km of bus lane on sixteen of the busies bus corridors in Dublin

Our objective is to provide a continuous bus lane in each direction as well as maintaining two general traffic lanes.

We also want to provide a dedicated cycle track on each side of the road providing safe cycling facilities, segregated from other wehicular traffic.

Benefits

BUS CONECTS

TAMAGEMENT OF MASS RESPONSES

Good for bus passengers

The core bus corridor project will deliver on improving journey times and creating certainty and confidence in the bus system.

Potential journey time savings of up to 40-50% per corridor

14

16

13

Benefits

Bus Connects
Connects

Good for environment
Tackling the challenges of climate change is a national priority and Buscomeets will contribute significantly to that objective.

It will do this by:

- Encouraging people to move from cars on a sustainable transport mode such as bus.

- Making bus journeys shorter and quicker.

- Reducing overall congestion

Benefits

Good for jobs

- A well-functioning public transport system is a basic requirement when it comes to creating good employment opportunities.

- By improving the overall public transport offering, these proposals when the comes of the proposals will be considered to the control of t

15

Benefits

Good for city living

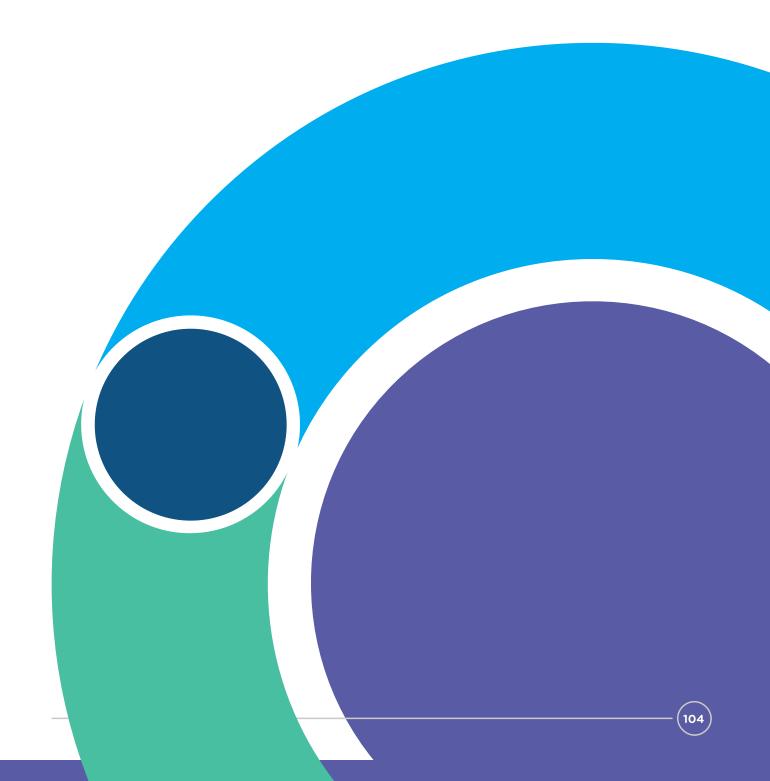

By providing a high-quality, frequent and reliable bus service, we can make Dublin a more attractive place to live, work and visit.

With quicker journeys and reliable services, the city will seem like a smaller, more accessible place and everywhere will be within an easy bus ride of just about anywhere else.

All of Dublin – all of its colleges, offices, retail streets; all of its croffee shops; all of its pubs and bookshops; all of its restaurants and theatters, all of its character – will be opened up, to all of its citizens and all of its visitors.

June 12th, 2018

Re: BusConnects Dublin - Core Bus Corridors Project

Dear Deputy.

Please find attached a copy of the BusConnects Core Bus Corridors Project report that we are unveiling today.

This discussion document sets out draft proposals to vastly improve bus journey times and cycling priority along congested corridors in the Dublin region. The project is a central element of the National Transport Authority's €2 billion BusConnects strategy to transform the city's bus system, so it is fast, reliable, punctual, convenient and affordable.

Currently buses running on the major arteries into the city centre are sharing road space with trucks, vans and cars for all but 30% of the journey despite the bus system accounting for 67% of public transport journeys in the Greater Dublin Area. However, levels of congestion are increasing daily and it is anticipated that by 2040 the Dublin region will have increased by 25% to 1.5 million.

When BusConnects was announced last year, the NTA provided a broad overview as to which corridors would be included in the plan and the resulting positive outcomes would be for communities around the region and for the city itself.

We also announced that BusConnects would provide for the creation of a "next generation" network of cycling facilities. On each of the core bus corridors, we will provide high quality cycling facilities segregated from the bus lanes and general traffic lanes as far as is practicable. When implemented, this will result in a safer experience for city cyclists.

The unveiling of BusConnects last year marked the beginning of a conversation on the role that this ambitious programme of investment in our bus services can play in meeting the future transport needs of the people of Dublin. One year on, we want to make sure the conversation continues, and that's why we are publishing this discussion document.

Significant progress has been made in putting together the overall plan, and in October this year we will be publishing our detailed proposals for each of the 16 corridors. At that stage we will be in a position to identify precise alignment along each of the corridors and to pinpoint the specific challenges and opportunities that will arise as a result.

As that work on evaluating options and assessing alternatives is complete, we will undertake a full public consultation, and at that point, we will be in a position to answer detailed questions on specific local issues. In the meantime, we are anxious to ensure that we keep you and members of the public informed.

You should also be aware that a separate but related announcement on the redesigned bus network for Dublin will take place in July. This will include proposals on a redesign of routes, schedules, timetables and fare structures to meet the changing needs of passengers in Dublin.

There is no doubt that congestion in the capital city is negatively impacting bus journey times, but with ambitious measures such as BusConnects, we can vastly improve the bus experience for the growing number of passengers who wish to use sustainable transport modes in and around the city.

Yours sincerely,

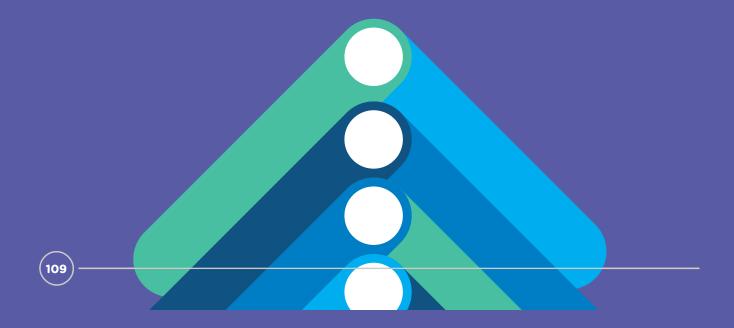

Anne Graham CEO, NTA

### VITA Údarás Náisiúnta Iompair National Transport Authority

### NTA SETS OUT PROPOSALS TO IMPROVE BUS JOURNEY TIMES FOR PASSENGERS IN DUBLIN

The National Transport Authority has today published the Core Bus Corridors Project report. This discussion document sets out draft proposals to vastly improve bus journey times and cycling priority along an increasing number of congested corridors in the Dublin region. The project is part of the NTA's €2bn BusConnects Dublin programme to transform the city's bus system.

The proposals, which if implemented, will provide the following:

- 230kms of continuous bus priority over 16 radial core bus corridors
- 200kms of cycle tracks and cycle lanes provided on the corridors
- Journey time savings of up to 40%-50% across the 16 radial core bus corridors

In 2017 Dublin Bus combined with Bus Eireann carried over 147 million passengers in the Dublin area, about 67% of public transport journeys in the Greater Dublin Area. This is about four times the number of passengers carried by Luas and close to five times the number of passengers carried by DART and commuter rail.

However, despite the importance of the bus system, the main corridors in and out of the city only have bus lanes for about one third of their length. This means that for most of the journey, buses are competing for space with other traffic and are affected by general traffic congestion. With the population of the Dublin region projected to increase to 1.5 million by 2040, a jump of 25% from today's 1.2 million, that trend of increasing congestion will continue unless significant and radical action is taken.

When BusConnects was announced last year, NTA outlined how it would provide the opportunity to improve the bus experience for passengers by providing faster journey times in comfortable, modern vehicles with high frequency services on busy routes.

The Authority also announced that BusConnects would provide for the creation of a "next generation" network of cycling facilities. On each of the Core Bus corridors, we will provide high quality cycling facilities, segregated from the bus lanes and general traffic lanes as far as is practicable.

Significant progress has been made in putting together the overall plan, and in October of this year NTA will publish detailed and considered proposals for each of the 16 corridors. At that stage a full public consultation process will commence. This will allow people to provide feedback and their thoughts on the proposals and the NTA will fully engage with people along the corridors and surrounding areas.

Anne Graham, CEO of the NTA said: "Everybody agrees that something needs to be done to improve our bus services. Passenger numbers on public transport continue to increase, but as the economy continues to improve, and as demands on public transport increase, our infrastructure will come under more and more strain.

"People want to use public and sustainable transport in and out of the city. Our recent canal cordon 2017 figures are showing us this with almost 70% of daily trips across the canals of Dublin being made by sustainable transport. The NTA needs to support these trips and to improve the journey times for public transport users and to offset the negative impact of congestion.

"Unless we address the infrastructure issues, it is inevitable that in the years ahead, travelling by bus will become slower, less reliable and more frustrating for everybody. But with BusConnects there is a solution on offer."

"Last year's BusConnects announcement marked the beginning of a conversation on the role that this ambitious programme of investment in our bus services can play in meeting the future transport needs of the people of Dublin. One year on, we want to make sure that the conversation continues, and that is why we are publishing this document.

"As the project development work is complete, we will of course be undertaking a full process of public consultation, and at that point, we will be in a position to answer detailed questions on specific local issues.

"There is no doubt that congestion in Dublin is getting worse, but with the ambitious measures put forward today, there is light at the end of the tunnel. We believe that our plans have the potential to completely transform public transport, to make travelling by bus more attractive, and to get more people using sustainable modes of transport in and around the city."

### Digital Media Plan June 2018:

For the launch of the BusConnects Core Bus Corridor Discussion Document, we had a comprehensive digital media plan which consisted of promoted posts and on Social and Digital.

These include promoted posts on Facebook and Twitter. We also had native content on The Journal.ie and Dublinlive.ie and Youtube.

In addition to this we geo-targeted regular users of bus services based on online behavior in the Dublin area with promoted posts online news sites such as RTE, Independent, Irish Times, Joe.ie and Lovindublin.ie.

I. Introduction

2

**BusConnects Core Bus Corridors** 9: Greenhills > City Centre SECTION 1

### Why does Dublin need a core bus corridor network?

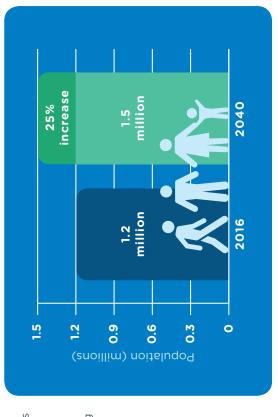

medium term by the bus as opposed to long-term projects such as density manner. Growth areas can only be served in the short and and travelling across Dublin. The number of commercial vehicles continues to rise as does the number of tourists. The commuter challenges facing the Dublin region and needs to be addressed areas surrounding Dublin continue to spread and grow in a low to safeguard the growth of the Dublin region and keep people seeing significant increases in the number of people working moving. Ireland's economic recovery from the recession is Congestion - Congestion is one of the most significant rail and Luas.

for space with general traffic and so are affected by the increasing At present bus lanes are in place for less than one third of a bus journey on the busy corridors. This means buses are competing levels of congestion.

**Growing Population** - It is predicted that the population for the Dublin region will grow 25% by 2040, bringing it to almost .5m for the region. This huge growth in population has to be accommodated with a quality public transport system.

our future transport needs. A good bus system has the reach and flexibility to service all the new housing developments, business system because the bus system is the main component to meet Dublin with 67% of public transport journeys each day made by bus. The bus system carries three and four times the number of proven solution and is the main form of public transport across parks, hospitals, colleges and retail shops across Dublin. It is a **O** The bus system can deliver - We need to invest in the bus people who travel on Luas or Dart and commuter rail.

# Forecast Population Growth in Dublin Region

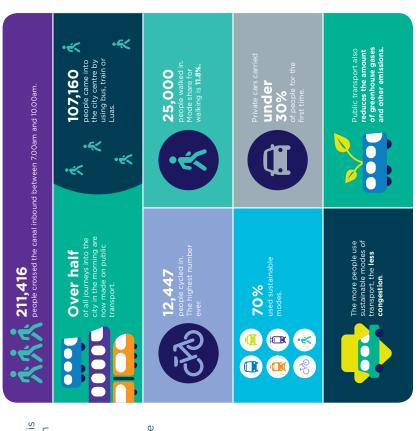

4

cycling safer and more attractive than ever before. This initiative is the foundation of the overall cycle network for the Greater Dublin also deliver 200km of segregated cycling infrastructure to make just about the provision of bus lanes. Under this project we will People want to cycle - The core bus corridor project is not Area.

corridors will provide people, families and their children a suitable people across Dublin. Safe cycling facilities across the 16 key bus Commuting to work by bicycle has increased by 43% since 2011. vital component of creating a sustainable transport system for making to cycle. This project will support that trend and is a Again this growth represents a clear choice that people are environment to cycle where they want and when they want

and also by the significant shift of people choosing to use public figures over 70% of people travelling into the city each morning only account for 30% of travel into the city centre each day and do so by sustainable transport modes and mostly by bus. Cars transport. People want to use it and should have a reliable and a core bus network is being driven by increases in congestion People want to use public transport - The need to build efficient bus system to travel on. Based on 2017 canal cordon therefore the amount of road space allocated to sustainable ransport needs to reflect that position.

  - Simpler fare structure.

New bus livery providing a common style across different operators.

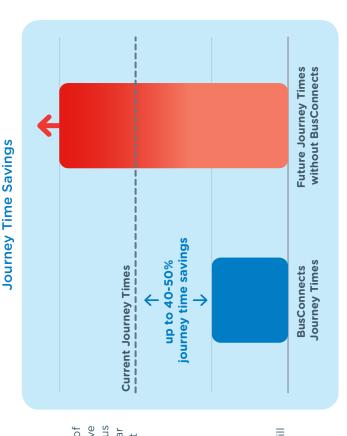

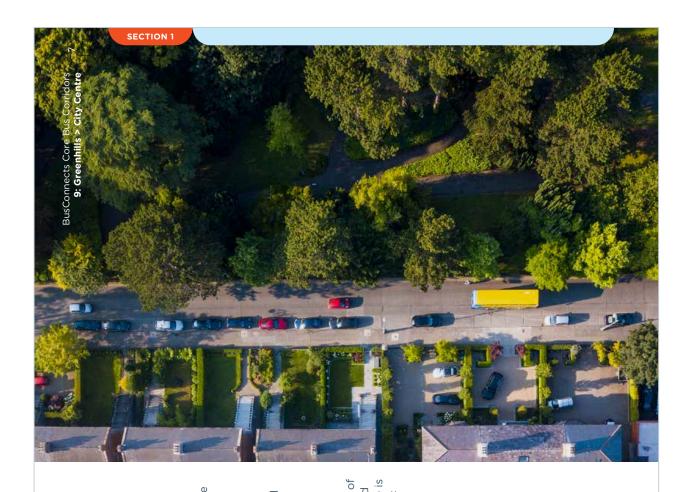

9

**SECTION 1** 

### What are the benefits of this project? 4.

- time people spend commuting will make bus travel more attractive and reduce our reliance on car travel. The more convenient the bus and reliability. Improved journey times and reducing the amount of system is, the faster the modal shift will be for people from the car to the bus. Not only will current bus users and cyclists benefit but Dedicated bus lanes can significantly increase bus travel speeds future commuters will be able to avail of a better system as the deliver journey time savings of up to 40-50% on each corridor. N Journey Time Savings - The core bus corridor project will improved bus and cycle lanes are built.
  - buses are accessible and bus stops, bus shelters and footpaths will means both people's level of mobility and the costs of travelling. There are many tens of thousands of people across Dublin who to reach the destinations and services they want to get to. This cannot drive a car, do not have a car and are completely reliant Accessibility for all - Accessibility is about people's ability accessibility for the elderly and mobility impaired because all on the bus service. The bus lane improvements will enhance support easy boarding and disembarking of the buses. 6
    - cycling facilities provided. These new or improved cycle lanes will Better cycling facilities - This project will see the provision of much needed cycling facilities around the city region. Across the 16 radial bus corridors there will be over 200kms of high quality be segregated from bus lanes and general traffic where feasible.

Obedestrians and Local Urban Centres - In addition to bus lanes and cycling facilities this project is an opportunity to enhance and improve local areas. This project is focused on making things better for commuters and communities around the bus corridors. Along each route, improvements and enhancements will be made to footpaths, walkways and pedestrian crossings. Funding and investment for local urban centres with additional landscaping and outdoor amenities will be provided.

Building a sustainable city and addressing climate
 By applications better his system for Dublin up

**Change** – By providing a better bus system for Dublin we can make it a more attractive place to live, work and visit. A good public transport system is vital to support the economic activity of any city and can also address the need to improve air quality and reduce CO<sup>2</sup> emissions. Tackling the challenges of climate change is a priority for the Government and moving more people to public transport is a key component of the solution.

ω

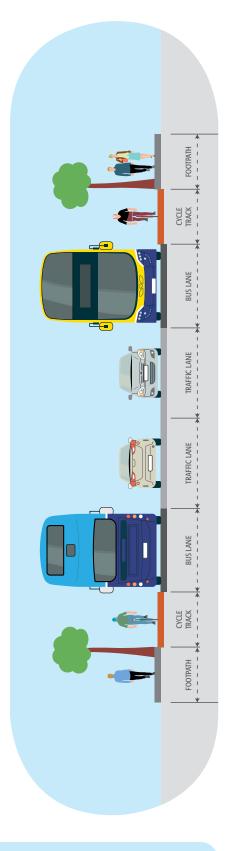

# .5 What does the core bus corridor project entail?

The core bus corridor project proposes the provision of 230 kilometres of bus lanes on sixteen of the busiest bus corridors and 200 kilometres of cycle lanes and tracks as published in the discussion document, Core Bus Corridor Project Report June 2018.

The layout below shows the arrangement that we are seeking to achieve on each corridor. However, this optimal layout is difficult to achieve in practice and we have proposed alternative solutions in various places to deliver the required bus and cycling lanes.

Bus lanes are needed to make the current and future bus system operate efficiently, reliably and punctually. Our intention is to develop these bus corridors so that each will have continuous bus priority – in other words, a continuous bus lane in each direction as well as maintaining two general traffic lanes. In addition we also want to provide safe cycling facilities, segregated where possible from other vehicular traffic. This will remove the delays currently experienced which will grow worse as congestion increases.

### or Greenhills to City Centre **Emerging Preferred Route**

The Emerging Preferred Route set out in this consultation document was identified following an assessment of various alternatives.

the assessment work undertaken is available on www.BusConnects.ie. The route selection process involved identification and consideration of possible options taking account of criteria including local impacts on property frontage, existing traffic patterns and broad assessment of environmental impacts. A Feasibility Report setting out details of

submissions received will a decision on the final Preferred Route be now sought. It is important to know that this option is not adopted identified for this corridor and public feedback on that proposal is yet. Only following this public consultation and the review of the Arising from that work an Emerging Preferred Route has been

# **Greenhills to City Centre Overview**

Walkinstown Road as far as the junction with the R110 Long Mile Road. CBC is routed along Belgard Square West and Belgard Square North the R819 Greenhills Road, Ballymount Avenue, Calmount Road, and enters the Institute of Technology Tallaght campus and follows the Square West at the junction with Cookstown Way. From here the existing internal road through the campus, exiting at the existing junction on Greenhills Road. From here the CBC is routed along The Greenhills Core Bus Corridor (CBC) commences on Belgard as far as the junction with Belgard Road. At this point the CBC

It is proposed to realign the existing Greenhills Road in two locations on this section: along an existing road reservation between Parkview way of extending both Ballymount Avenue and Calmount Avenue to and Treepark Road, and through Ballymount Industrial Estate by connect to Greenhills Road at new signalised junctions.

The CBC is then routed along Patrick Street and Nicholas Street to the unction with Christchurch Place where it will join the prevailing traffic Coombe, and Dean Street to the junction with the R137 Patrick Street. Walkinstown Road the CBC is routed along the R110 Drimnagh Road, Crumlin Road, Dolphin's Barn, Cork Street, St. Luke's Avenue, The From the junction of the R110 Long Mile Road and the R819 management regime in the city centre.

### 2.2.1 Belgard Square South to Greenhills Road Institute of Technology Tallaght Access Road Belgard Square West, Belgard Square North,

Square West is intended to be a bus only route not accessible to general on Belgard Square South. It is proposed to change the roundabout to a fully signalised junction with improved pedestrian facilities. Belgard Broadfield Hall access to and from these buildings and neighbouring traffic light system. Access to and from the Old Blessington Road to The Greenhills CBC commences at the existing roundabout junction developments will still be permitted from Belgard Square West. Bus traffic across Old Blessington Road will be controlled by a bus gate traffic. Between Belgard Square South and Tallaght Cross West Belgard Square West will be permitted.

North at the Tallaght Hospital Entrance and Cookstown Way to a fully It is proposed to change the roundabout junction on Belgard Square

SECTION 2

**SECTION 2** 

BusConnects Core Bus Corridors

9: Greenhills > City Centre

=

signalised junction to accommodate new bus lane and pedestrian facilities. The roundabout junctions at Belgard Square East and at Belgard Road will also be replaced with new signalised junction arrangements. From Belgard Road it is proposed to route the bus corridor through the grounds of the Institute of Technology Tallaght (ITT). It is intended to change one of the inbound lanes on the entry road to a contra-flow bus lane. It proposed to provide new bus stop facilities within the campus.

The ITT junction with the Greenhills Road is currently an uncontrolled priority junction. It is proposed to upgrade this junction to a fully signalised junction with pedestrian crossing facilities.

# 2.2.2 Greenhills Road to Walkinstown Roundabout - Greenhills Road, Ballymount Avenue, Calmount Road, back to rejoin Greenhills Road

Between the ITT access junction and the junction with Mayberry Road along the Greenhills Road it is intended to provide one bus lane, one traffic lane and a cycle track in both directions. To accommodate the road cross section it is proposed to utilise limited land take along this section on the west side of the existing Greenhills Road with some limited short sections of land take likely also on the east side.

To improve the operation of the existing junction and minimise landtake, it is proposed to introduce a right turn ban from Greenhills Road to the entrance to Harvey Norman store and right turn ban from the Greenhills Road to Hibernian Industrial Estate. Access from Harvey Norman to Greenhills Road will be maintained at the junction Right turning vehicles for Harvey Norman will be directed to the Airton Road junction. At this junction, vehicles will be able to turn

right and access the Harvey Norman store from this road.

Right turning vehicles for the Hibernian Industrial estate will be directed to the next junction (at Agnelli Motor Park) where full access will be maintained.

Between Mayberry Road and Tymon Lane it is proposed to undertake major changes to the local road network. South Dublin County Council has identified this section of Greenhills Road for upgrade under their current County Development Plan. It is intended to implement some of these road construction works as part of this scheme. The existing Greenhills Road will be retained as an access road for Park View Estate. A new Greenhills Road will be constructed on the green space south of Birchview Avenue and Treepark Road. Traffic to the Old Greenhills Road will be restricted to local traffic only and movement bans will be proposed to enforce this. This new section of road will be wide enough to accommodate one bus lane, one traffic lane and a cycle track in both directions with new bus stop and pedestrian crossing facilities.

The existing M50 bridge crossing will be retained; however it will present a width restriction. This crossing may be reviewed in the next design stage. It is currently proposed to maintain one lane of general traffic in each direction. However, bus priority will be achieved through a queue relocation facility on the approaches to the bridge crossing. After the bridge crossing, it is proposed to widen the road again to accommodate one bus lane, one traffic lane and a cycle track in both directions.

At Keadeen Park it is proposed to close Greenhills Road to traffic. Traffic will be directed on to a new road link connecting the road

12

**BusConnects Core Bus Corridors** 9: Greenhills > City Centre

Avenue and Calmount Road will be upgraded from a roundabout to a connect Calmount Road to Greenhills Road with a new link road. It is take will be required to construct a new roundabout at this proposed proposed to connect the existing Greenhills Road to Calmount Road signalised junction with improved pedestrian facilities. The bus route road networks at Calmount Road. The junction between Ballymount will be directed down Calmount Road. The existing road is intended to be widened to incorporate bus and cycle lanes. It is proposed to with a new link road through Calmount Avenue. Some limited land to Ballymount Avenue. The new road will tie back into the existing unction.

SECTION 2

cyclist facilities. The indicative extents of this land take are included in section of road will need to be reviewed. It is intended to upgrade the in both directions. This will require limited land take on the south side existing roundabout junction to incorporate improved pedestrian and proposed to maintain one bus lane, one traffic lane and a cycle track of Greenhills Road. Some current access arrangements along this Between the Calmount Road and Walkinstown Roundabout, it is the Appendix of this brochure.

### Walkinstown Road, Drimnagh Road, Crumlin Road 2.2.3 Walkinstown Roundabout to Dolphin Road

and Kilnamanagh Road. Land take to the east of Walkinstown Road On Walkinstown Road between Walkinstown Roundabout and the accommodate this cross section, it is proposed to utilise land take to accommodate dedicated cycle lanes on this section of road. To general traffic lane in both directions. There is insufficient space to west of the Walkinstown Road between Walkinstown Avenue Long Mile Road, it is proposed to provide one bus lane and one

Walkinstown Road through Walkinstown Drive. It is also intended to may be required between Kilnamanagh Road and Long Mile Road. It is proposed to introduce a right turn ban from Walkinstown Road to introduce a right turn ban for right turning traffic from Walkinstown Kilnamanagh Road. Kilnamanagh Road will remain accessible from Road to the southern entrance of the SuperValu supermarket.

providing a quiet route linking Walkinstown Roundabout with Kildare To accommodate cyclists on this section of the route, an alternative cycle route is proposed along Bunting Road and St. Marys Road Road.

pedestrian crossing. On Drimnagh Road it is proposed to maintain one bus lane, one general traffic lane and one cycle track in both directions. It is proposed to upgrade the existing Long Mile Road / Walkinstown Road junction to provide bus priority signal facilities and improved property between Balfe Road and Kildare Road may be required. To allow this revised cross section some limited land take from

is insufficient space to provide dedicated cycle lanes. To accommodate and one general traffic lane. Due to width restrictions in the area there this restricted cross section it will be necessary to acquire land along Crumlin Road. The indicative extents of this land take are included in the Appendix of this brochure. Additional bus stops will be provided intended to restrict the proposed road cross section to one bus lane On Crumlin Road between Kildare Road and Sundrive Road it is along this route.

Road. To improve local safety it is intended to introduce a no entry sign To facilitate cyclists, it is proposed to redirect them through Kildare at the junction of Kildare Road and Clonard Road for traffic in both SECTION 2

BusConnects Core Bus Corridors

9: Greenhills > City Centre

13

directions. This would prevent general through traffic; however buses, taxis and cyclists movements will remain unrestricted along Kildare Road. Eastbound traffic would be directed along Clonard Road, through Downpatrick Road on to Bangor Road. Westbound traffic would also be directed up Clonard Road onto the Crumlin Road. Cyclists would proceed from Kildare Road to Clogher Road and be redirected along Slane Road. From Slane Road, cyclists would travel along Downpatrick Road and on Sundrive Road. On Sundrive Road, a new cycle lane in both directions is to be provided between the junction of Downpatrick Road and Crumlin Road.

At the junction between Crumlin Road and Herberton Road, it is proposed to modify the existing layout to improve the kerb alignments and provide improved pedestrian crossing facilities. On the Crumlin Road between Herberton Road and Dolphin Road it is proposed to maintain one bus lane and one general traffic lane in both directions. There is insufficient road width on this section to provide dedicated cycle tracks.

# 2.2.4 Dolphin Road to Christchurch Place – Dolphins Barn, Cork Street, St Luke's Avenue, Dean Street, Patrick Street, Nicholas Street, Christchurch Place

Between Dolphin Road and South Circular Road, it is intended to provide one bus lane, one general traffic lane and one cycle track in both directions. To improve bus priority at the South Circular Road junction, it is proposed to introduce a left turn ban in both directions. To make this turning movement drivers will be directed down Rueben Road and onto Haroldville Avenue or onto Parnell / Dolphin Road.

Between South Circular Road and Ardee Street and on along Dean

Street it is proposed to have one bus lane, one general traffic lane and one cycle track in both directions. It is also intended to upgrade the Ardee Street junction with improved pedestrian facilities.

It is proposed to modify the Kevin Street / Dean Street junction to facilitate improved cycle way facilities. There is currently insufficient road width on Dean Street to facilitate bus lanes but bus priority from St. Luke's Avenue will be maintained with a new Bus Only signal.

Between Dean Street Junction and Christchurch Place it is proposed to have one bus lane, one general traffic lane and one cycle track in both directions. The cross section would be accommodated by removing the central median and realigning the existing kerb line. Some on-street loading bays will be maintained between Bride Road and Bull Alley Street. On Christchurch Place the route will join the prevailing traffic management regime in the city centre.

## 2.3 Key Facts

- Approximate number of properties that may be impacted: 220
- Approximate number of on-street parking spaces that may be removed: 20
- Napproximate number of roadside trees that may be removed: 50
- Napproximate route length: 11kms
- N Approximate new cycle lane length: **5kms**
- O Current bus journey time: up to up to 80 mins
- No BusConnects journey time: 35-40 mins
- S Future Bus journey time without BusConnects: 100 mins +

7

# 3. Challenges and Mitigations

# The Challenges

not postponed until the problem is far greater. Some of the decisions may be hard but they are being made because we believe that these plans have the potential to fundamentally transform the way public difficult. However, the decision-making needs to be done now and It's important to acknowledge that the choices required to deliver this step-change in the performance of the bus system will be transport works in Dublin.

**SECTION 3** 

dates back centuries. Needless to say the streets were not designed of the city each day. Some of the city's inner suburbs date back to Victorian times, with road layouts suited to more modest levels of providing a fit-for-purpose bus system, built on a streetscape that Our challenge now is to respond to the needs of a modern city by to move the number of people that now need to travel in and out traffic than we see today.

- We will need to widen roads;
- >> We will have to convert current traffic lanes to bus lanes;
- We will need to restrict on-street parking;
- We will need to remove trees or parts of front gardens.

changes which we can make that would generate meaningful benefits. were easier to implement - the ones that caused little or no disruption Not all the impacts will be felt equally and some locations will require more changes than others. Over the years those modifications that - have been made. This means that there are no longer any simple

If we don't decide to make these changes now, then we need to accept that Dublin will become increasingly congested and a less attractive place to live and work, both for us now and for future generations.

### **Potential Impacts** 3.2

## 3.2.1 Traffic changes

to how traffic currently moves around the streets. On some corridors, By creating more priority for buses and cycling there will be changes generally segregated from vehicular traffic, and pedestrian crossings introduced and in some places general traffic will have to take new certain roads may become one-way, new bus-only sections will be routes in and out of the city. Additional cycle routes will be built, will be added and moved in some areas.

## 3.2.2 Land take

and driveways a short distance back from the existing road boundary. and land in front of commercial properties to allow the bus and cycle lanes to be provided. This would require rebuilding new garden walls often not be possible to accommodate the bus lanes and cycle lanes Because there is so little unused space along these busy roads, it will be necessary, in places, to acquire parts of front gardens, driveways in the width available. In order to achieve the required space it will

# 3.2.3 Reduction of On-Street Parking and Loading Facilities

business areas there will be a need to reduce the amount of on-street Because the roads that need widening travel through residential and parking and loading facilities to accommodate the new layout. BusConnects Core Bus Corridors
9: Greenhills > City Centre

15

# 3.2.4 Removal of Trees

As with the need to remove some parts of front gardens and footpaths there will be also be a need to remove trees along some of the corridors.

# 3.2.5 Road Works and Construction Sites

Widening roads, and building bus and cycle lanes, requires construction work. There will be excavation of the existing roads, plus parts of gardens and footpaths where needed. There will be resurfacing, kerbing, replanting and landscaping. As with any work site and road works, there will be a certain level of noise, dust and temporary traffic diversions.

# 3.3 How we will address those challenges

Obviously these challenges and impacts are significant. Every feasible option is being looked at to minimise the disruption to people, their property and the wider local community. Where there is simply no viable alternative, and where we know we have to remove trees, portions of gardens, driveways or parking, we will ensure appropriate mitigation measures are put in place, wherever practicable.

As part of this public consultation potentially impacted property owners will be contacted directly by the NTA and a direct dialogue will commence. As each individual property owner will have specific and personal issues there will be a dedicated liaison team to engage with this group on an individual basis.

There are principles for mitigation, statutory compensation and reparation which will be adhered to by the NTA as part of the statutory planning process. However, below are some of the measures that we envisage will be included. This list is not exhaustive and we anticipate that there will be other measures that will need to be put in place.

## 3.3.1 Traffic Changes

Where general traffic is diverted and re-routed, adequate signage and road markings will be provided for people to find their way.

Measures will be implemented to ensure that "rat-runs" do not emerge as a consequence of the re-routed traffic. Also, local access will be maintained where new bus-only sections or one-way systems are brought in for residents and commercial properties.

SECTION 3

## 3.3.2 Land take

Where lands, such as parts of gardens and driveways, are being acquired for widening we will purchase the portion of front gardens and driveways from property owners; ensure new landscaping and replanting of the gardens, reinstatement of driveways as well as providing compensation for the garden and driveway portion loss and disruption.

Where private and public walls or fencing are removed we will rebuild new garden walls and replace fencing where gardens have been affected and shortened. Also, where public or commercial walls and fencing have been taken they will be rebuilt and replaced.

# 3.3.3 On street parking and Loading Facilities

Where there is a loss of on-street parking and loading facilities we will seek to provide, where feasible, alternative arrangements close by for residents and businesses.

#### 3.3.4 Trees

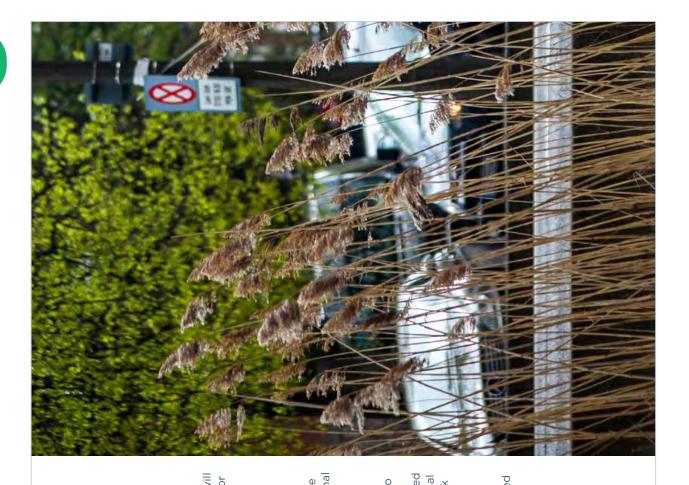

and, where it is feasible, plant them as close as possible to the original will use mature or semi-mature ready-grown trees where appropriate Where trees are removed from roadsides and footpaths we will put in place a comprehensive replanting programme. This programme ocations.

# 3.3.5 Urban Centre Improvements

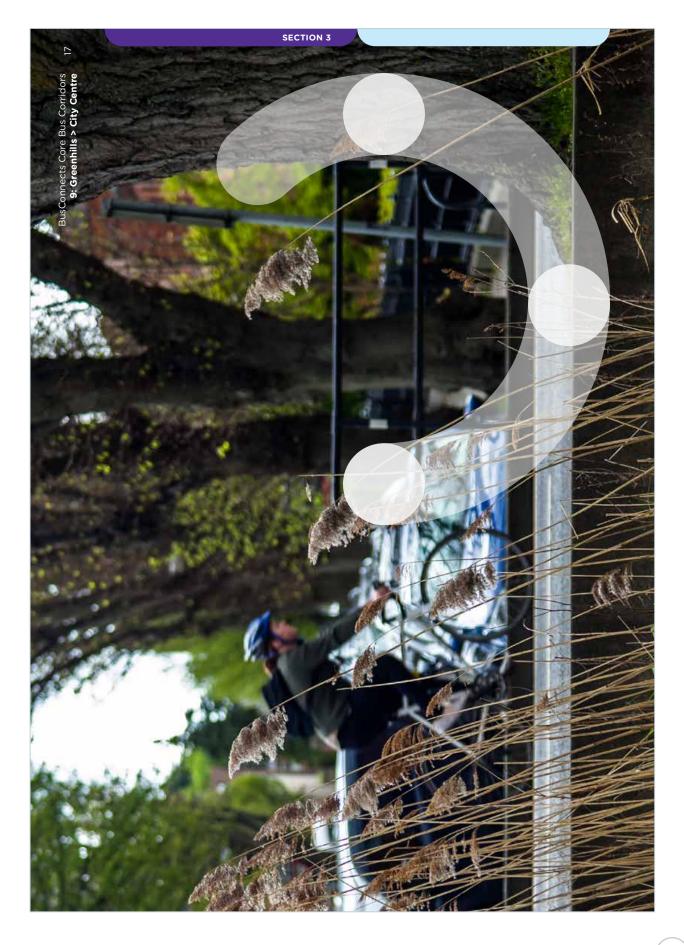

important to use this opportunity to not only replace what is removed but to enhance the local areas. To do so, we will consult with the local We will look for areas along the busy corridors where it is possible to authorities on such urban centre improvements and collectively seek improve the existing local spaces and the existing landscaping. It is to create attractive local environments.

# 3.3.6 Road Works and Construction Sites

During the construction stages the construction sites will be localised very important to keep the traffic moving and ensuring local access residential nature of many of the roads. Traffic management will be and managed on a road by road basis. The size of each work site and the hours of working will have to take into consideration the for people and deliveries is always maintained.

16

BusConnects Core Bus Corridors 9: Greenhills > City Centre

8

# 4. The Process for the Acquisition of Land

Where the potential for impacts on private lands have been identified, the following process applies:

of this is to start a direct dialogue between NTA and the potentially Q4 2018 - Q2 2019 NTA will issue information letters (not formal Corridor. Potentially impacted includes for example, the acquisition rebuilding of same to make way for street widening. The intention of parts of front gardens, walls, fences, gates, driveways and the compulsory purchase order (CPO) notifications) to potentially impacted land owners and/or occupiers along each Core Bus impacted parties.

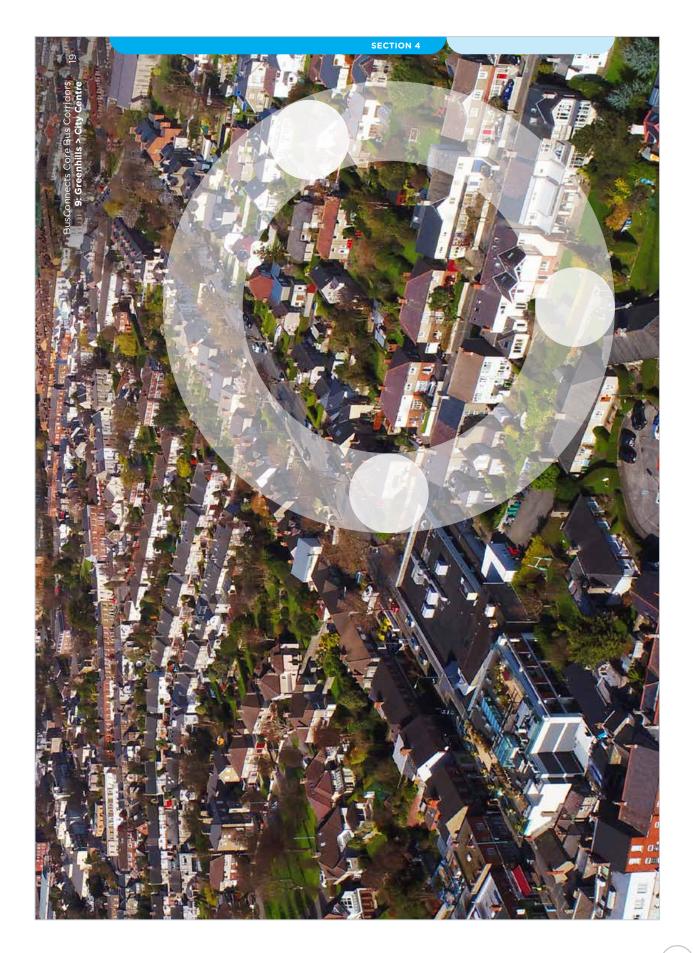

progressed. During this time NTA will endeavour to minimise impacts ф the proposed development and what arrangements can be made impacted parties will continue to understand the likely impact of the project design and environmental impact assessment will be During 2019 to prepare the statutory planning documentation, on private lands. Direct dialogue between NTA and potentially minimise and where possible avoid those impacts.

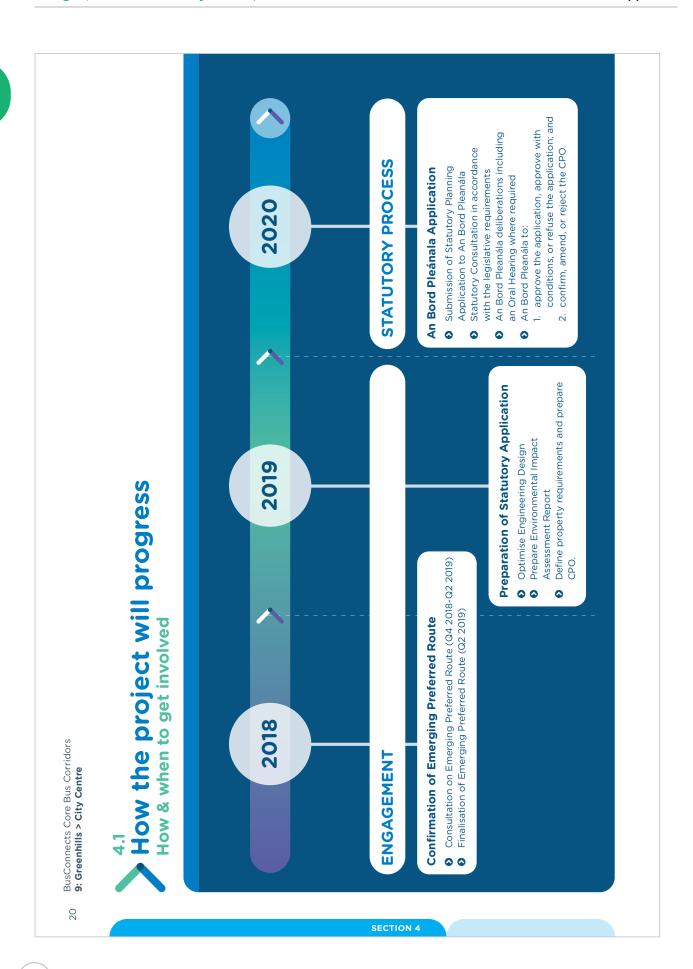

impacted owners of land proposed to be compulsorily purchased for the project. It will make a formal application to An Bord Pleanála for confirmation to compulsorily purchase necessary lands for purposes planning documentation and will serve formal notice on the actual End of 2019 / start of 2020 NTA will finalise the statutory of constructing upgraded bus-lanes and bike-lanes.

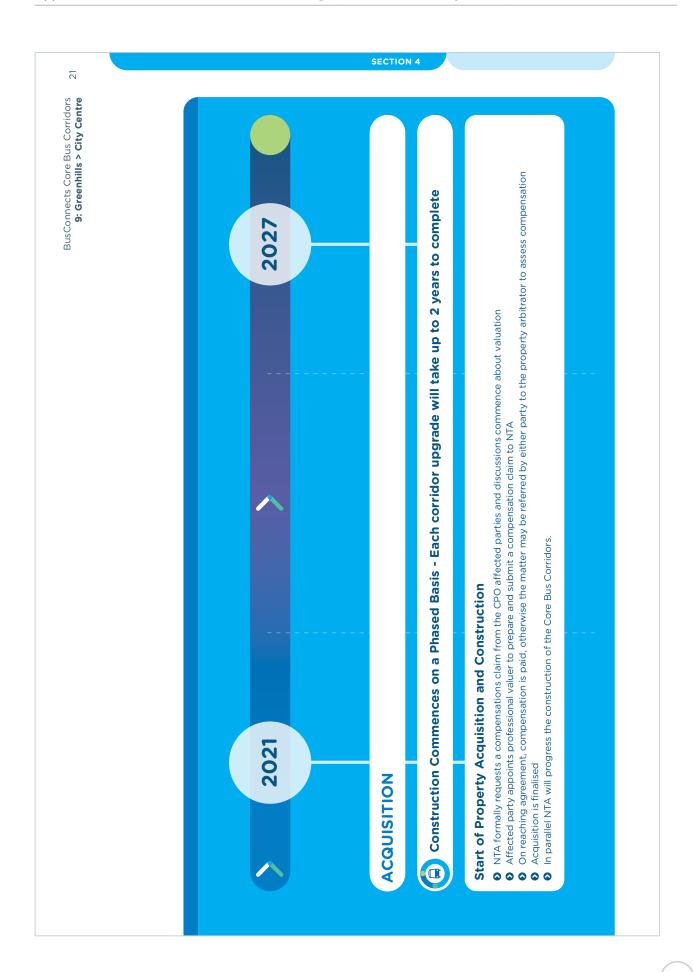

necessary. The statutory process will conclude with a decision by An application. There will be a period of statutory public consultation to allow those notified as being subject to CPO, and the public at large, will be followed by an Oral Hearing by An Bord Pleanála if deemed to make submissions and/or objections to An Bord Pleanála. This During 2020 An Bord Pleanála will consider the planning Bord Pleanála on whether to:

- approve the application, approve with conditions, or refuse the application; and
- confirm, amend, or reject the CPO

construction start dates for each of the 16 corridors will be managed **From 2021 onwards** if An Bord Pleanála grants approval NTA will CPO, and progress construction of the project. The construction of commence valuations and negotiations to acquire the lands in the each core bus corridor will take up to two years to complete. The over the period 2021 through 2027.

### Core Bus Corridors Greenhills to City Centre

There has been a lot of thinking and work on the best routes for bus corridors.

These are known as Emerging Preferred Routes.

One route goes from Greenhills to the City Centre.

This bus corridor will start on Belgard Square West at the junction with Cookstown Way.

It will travel as far as Belgard Road.

The bus corridor will go through the Institute of Technology Tallaght, and come out on Greenhills Road.

It will go along Ballymount Avenue, Calmount Road, and Walkinstown Road to the Long Mile Road.

This bus corridor will continue along the Drimnagh Road, Crumlin Road, Dolphin's Barn, Cork Street, The Coombe, Patrick Street, and into the city centre.

Now, the bus journey from Greenhills to the City Centre takes up to 80 minutes.

With the bus corridor, this journey will take up to 40 minutes.

The route is 11 kilometres.

There will be new cycle lanes along this route.

We need to make changes along the route to make room for the bus corridor.

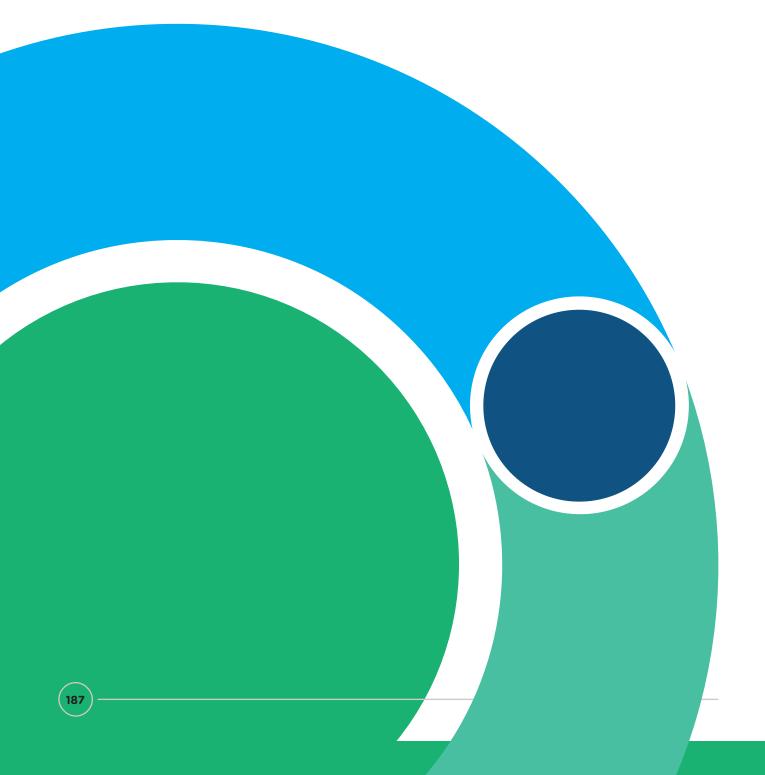

For example, changing road layouts, taking away parking spaces, taking down and replacing trees, making changes to some gardens.

You will find a map for this route and an information booklet at:

www.busconnects.ie

## 1. Introduction

**SECTION 1** 

### .1 Background

In June 2018 the National Transport Authority (NTA) published the Core Bus Corridors Project Report. The report was a discussion document outlining proposals for the delivery of a core bus corridor network across Dublin. It set out the vision for the provision of 230kms of dedicated bus lanes and 200km of cycle lanes/tracks on sixteen key bus corridors.

## Continuous bus lanes and cycle tracks

Separately in July 2018 the **Dublin Area Bus Network Redesign**, which is the redesign of bus services, started its first public consultation phase. Around 30,000 submissions including signed petitions and online survey responses were received by the end of September. Over the coming months all of these submissions will be reviewed and assessed. Following that process a revised network design will be published during 2019 for a second public consultation. It is envisaged that the implementation of the final network will take place in 2020. The network redesign can be implemented on the existing road network with some enhancements at key interchange locations.

The public consultation for the sixteen radial core bus corridors will now take place on a phased basis from November 2018 until May 2019. Each phase will be for a set number of corridors to be consulted on over a period of months. These public consultations phases will be the start of a detailed process of engagement and communication. All of which will take place prior to detailed designs being finalised and planning permissions sought.

This document is one of a series of sixteen, each dedicated to a single core bus corridor. The document provides a written description of the emerging preferred route from start to finish with supporting route maps. It explains the step by step process for engagement and consultation for potentially impacted property owners and the general public. It also outlines the process for planning and construction of the core bus corridor network including expected timelines.

2

BusConnects Core Bus Corridors 8: Clondalkin > Drimnagh

SECTION

**SECTION 1** 

## 1.2 Why does Dublin need a core bus corridor network?

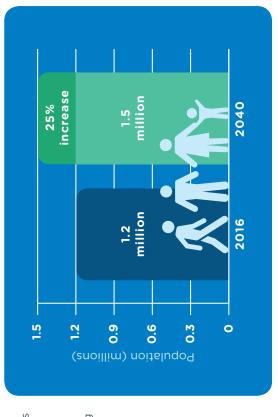

challenges facing the Dublin region and needs to be addressed to safeguard the growth of the Dublin region and keep people moving. Ireland's economic recovery from the recession is seeing significant increases in the number of people working and travelling across Dublin. The number of commercial vehicles continues to rise as does the number of tourists. The commuter areas surrounding Dublin continue to spread and grow in a low density manner. Growth areas can only be served in the short and medium term by the bus as opposed to long-term projects such as rail and Luas.

At present bus lanes are in place for less than one third of a bus journey on the busy corridors. This means buses are competing for space with general traffic and so are affected by the increasing levels of congestion.

**Growing Population** - It is predicted that the population for the Dublin region will grow 25% by 2040, bringing it to almost 1.5m for the region. This huge growth in population has to be accommodated with a quality public transport system.

System because the bus system is the main component to meet system because the bus system is the main component to meet our future transport needs. A good bus system has the reach and flexibility to service all the new housing developments, business parks, hospitals, colleges and retail shops across Dublin. It is a proven solution and is the main form of public transport across Dublin with 67% of public transport journeys each day made by bus. The bus system carries three and four times the number of people who travel on Luas or Dart and commuter rail.

## Forecast Population Growth in Dublin Region

**BusConnects Core Bus Corridors**

4

cycling safer and more attractive than ever before. This initiative is the foundation of the overall cycle network for the Greater Dublin also deliver 200km of segregated cycling infrastructure to make just about the provision of bus lanes. Under this project we will People want to cycle - The core bus corridor project is not Area.

corridors will provide people, families and their children a suitable people across Dublin. Safe cycling facilities across the 16 key bus Commuting to work by bicycle has increased by 43% since 2011. vital component of creating a sustainable transport system for making to cycle. This project will support that trend and is a Again this growth represents a clear choice that people are environment to cycle where they want and when they want

and also by the significant shift of people choosing to use public figures over 70% of people travelling into the city each morning only account for 30% of travel into the city centre each day and do so by sustainable transport modes and mostly by bus. Cars transport. People want to use it and should have a reliable and a core bus network is being driven by increases in congestion People want to use public transport - The need to build efficient bus system to travel on. Based on 2017 canal cordon therefore the amount of road space allocated to sustainable ransport needs to reflect that position.

BusConnects Core Bus Corridors
8: Clondalkin > Drimnagh

**SECTION 1** 

## 1.4 What are the benefits of this project?

- deliver journey time savings The core bus corridor project will deliver journey time savings of up to 40-50% on each corridor. Dedicated bus lanes can significantly increase bus travel speeds and reliability. Improved journey times and reducing the amount of time people spend commuting will make bus travel more attractive and reduce our reliance on car travel. The more convenient the bus system is, the faster the modal shift will be for people from the car to the bus. Not only will current bus users and cyclists benefit but future commuters will be able to avail of a better system as the improved bus and cycle lanes are built.
  - Accessibility for all Accessibility is about people's ability to reach the destinations and services they want to get to. This means both people's level of mobility and the costs of travelling. There are many tens of thousands of people across Dublin who cannot drive a car, do not have a car and are completely reliant on the bus service. The bus lane improvements will enhance accessibility for the elderly and mobility impaired because all buses are accessible and bus stops, bus shelters and footpaths will support easy boarding and disembarking of the buses.
    - **Better cycling facilities** This project will see the provision of much needed cycling facilities around the city region. Across the 16 radial bus corridors there will be over 200kms of high quality cycling facilities provided. These new or improved cycle lanes will be segregated from bus lanes and general traffic where feasible.

Observians and Local Urban Centres - In addition to bus lanes and cycling facilities this project is an opportunity to enhance and improve local areas. This project is focused on making things better for commuters and communities around the bus corridors. Along each route, improvements and enhancements will be made to footpaths, walkways and pedestrian crossings. Funding and investment for local urban centres with additional landscaping and outdoor amenities will be provided.

O Building a sustainable city and addressing climate

**change** – By providing a better bus system for Dublin we can make it a more attractive place to live, work and visit. A good public transport system is vital to support the economic activity of any city and can also address the need to improve air quality and reduce CO<sup>2</sup> emissions. Tackling the challenges of climate change is a priority for the Government and moving more people to public transport is a key component of the solution.

BusConnects Core Bus Corridors
8: Clondalkin > Drimnagh

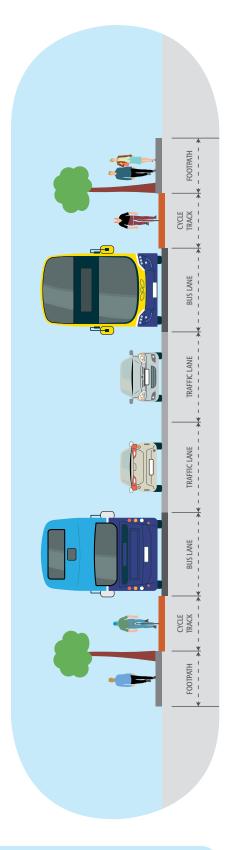

## .5 What does the core bus corridor project entail?

The core bus corridor project proposes the provision of 230 kilometres of bus lanes on sixteen of the busiest bus corridors and 200 kilometres of cycle lanes and tracks as published in the discussion document, Core Bus Corridor Project Report June 2018.

The layout below shows the arrangement that we are seeking to achieve on each corridor. However, this optimal layout is difficult to achieve in practice and we have proposed alternative solutions in various places to deliver the required bus and cycling lanes.

Bus lanes are needed to make the current and future bus system operate efficiently, reliably and punctually. Our intention is to develop these bus corridors so that each will have continuous bus priority – in other words, a continuous bus lane in each direction as well as maintaining two general traffic lanes. In addition we also want to provide safe cycling facilities, segregated where possible from other vehicular traffic. This will remove the delays currently experienced which will grow worse as congestion increases.

# 3. Challenges and Mitigations

### The Challenges

not postponed until the problem is far greater. Some of the decisions may be hard but they are being made because we believe that these plans have the potential to fundamentally transform the way public difficult. However, the decision-making needs to be done now and It's important to acknowledge that the choices required to deliver this step-change in the performance of the bus system will be transport works in Dublin.

dates back centuries. Needless to say the streets were not designed of the city each day. Some of the city's inner suburbs date back to Victorian times, with road layouts suited to more modest levels of providing a fit-for-purpose bus system, built on a streetscape that Our challenge now is to respond to the needs of a modern city by to move the number of people that now need to travel in and out traffic than we see today.

- We will need to widen roads;
- We will have to convert current traffic lanes to bus lanes;
- We will need to restrict on-street parking;
- We will need to remove trees or parts of front gardens.

changes which we can make that would generate meaningful benefits. were easier to implement - the ones that caused little or no disruption Not all the impacts will be felt equally and some locations will require more changes than others. Over the years those modifications that - have been made. This means that there are no longer any simple

If we don't decide to make these changes now, then we need to accept that Dublin will become increasingly congested and a less attractive place to live and work, both for us now and for future generations.

### **Potential Impacts** 3.2

### 3.2.1 Traffic changes

to how traffic currently moves around the streets. On some corridors, By creating more priority for buses and cycling there will be changes generally segregated from vehicular traffic, and pedestrian crossings introduced and in some places general traffic will have to take new certain roads may become one-way, new bus-only sections will be routes in and out of the city. Additional cycle routes will be built, will be added and moved in some areas.

### 3.2.2 Land take

and driveways a short distance back from the existing road boundary. and land in front of commercial properties to allow the bus and cycle lanes to be provided. This would require rebuilding new garden walls Because there is so little unused space along these busy roads, it will often not be possible to accommodate the bus lanes and cycle lanes be necessary, in places, to acquire parts of front gardens, driveways in the width available. In order to achieve the required space it will

## 3.2.3 Reduction of On-Street Parking and Loading **Facilities**

business areas there will be a need to reduce the amount of on-street Because the roads that need widening travel through residential and parking and loading facilities to accommodate the new layout.

SECTION 3

BusConnects Core Bus Corridors
8: Clondalkin > Drimnagh

13

# 3.2.4 Removal of Trees

As with the need to remove some parts of front gardens and footpaths there will be also be a need to remove trees along some of the corridors.

# 3.2.5 Road Works and Construction Sites

Widening roads, and building bus and cycle lanes, requires construction work. There will be excavation of the existing roads, plus parts of gardens and footpaths where needed. There will be resurfacing, kerbing, replanting and landscaping. As with any work site and road works, there will be a certain level of noise, dust and temporary traffic diversions.

# 3.3 How we will address those challenges

Obviously these challenges and impacts are significant. Every feasible option is being looked at to minimise the disruption to people, their property and the wider local community. Where there is simply no viable alternative, and where we know we have to remove trees, portions of gardens, driveways or parking, we will ensure appropriate mitigation measures are put in place, wherever practicable.

As part of this public consultation potentially impacted property owners will be contacted directly by the NTA and a direct dialogue will commence. As each individual property owner will have specific and personal issues there will be a dedicated liaison team to engage with this group on an individual basis.

There are principles for mitigation, statutory compensation and reparation which will be adhered to by the NTA as part of the statutory planning process. However, below are some of the measures that we envisage will be included. This list is not exhaustive and we anticipate that there will be other measures that will need to be put in place.

# 3.3.1 Traffic Changes

Where general traffic is diverted and re-routed, adequate signage and road markings will be provided for people to find their way.

Measures will be implemented to ensure that "rat-runs" do not emerge as a consequence of the re-routed traffic. Also, local access will be maintained where new bus-only sections or one-way systems are brought in for residents and commercial properties.

SECTION 3

# 3.3.2 Land take

Where lands, such as parts of gardens and driveways, are being acquired for widening we will purchase the portion of front gardens and driveways from property owners; ensure new landscaping and replanting of the gardens, reinstatement of driveways as well as providing compensation for the garden and driveway portion loss and disruption.

Where private and public walls or fencing are removed we will rebuild new garden walls and replace fencing where gardens have been affected and shortened. Also, where public or commercial walls and fencing have been taken they will be rebuilt and replaced.

# 3.3.3 On street parking and Loading Facilities

Where there is a loss of on-street parking and loading facilities we will seek to provide, where feasible, alternative arrangements close by for residents and businesses

# 3.3.4 Trees

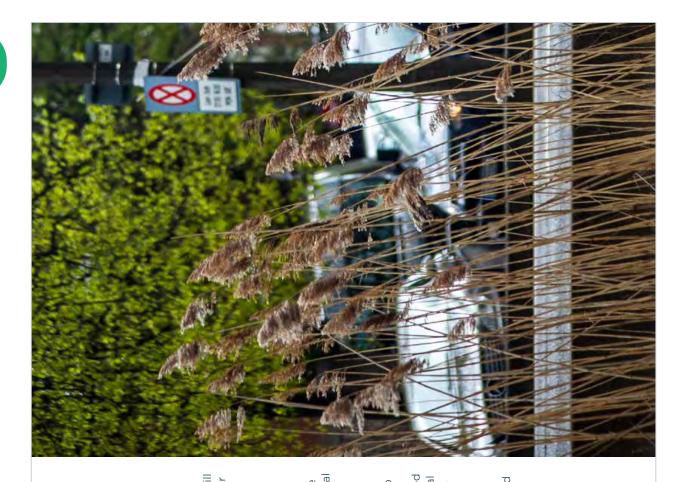

and, where it is feasible, plant them as close as possible to the original will use mature or semi-mature ready-grown trees where appropriate Where trees are removed from roadsides and footpaths we will put in place a comprehensive replanting programme. This programme ocations.

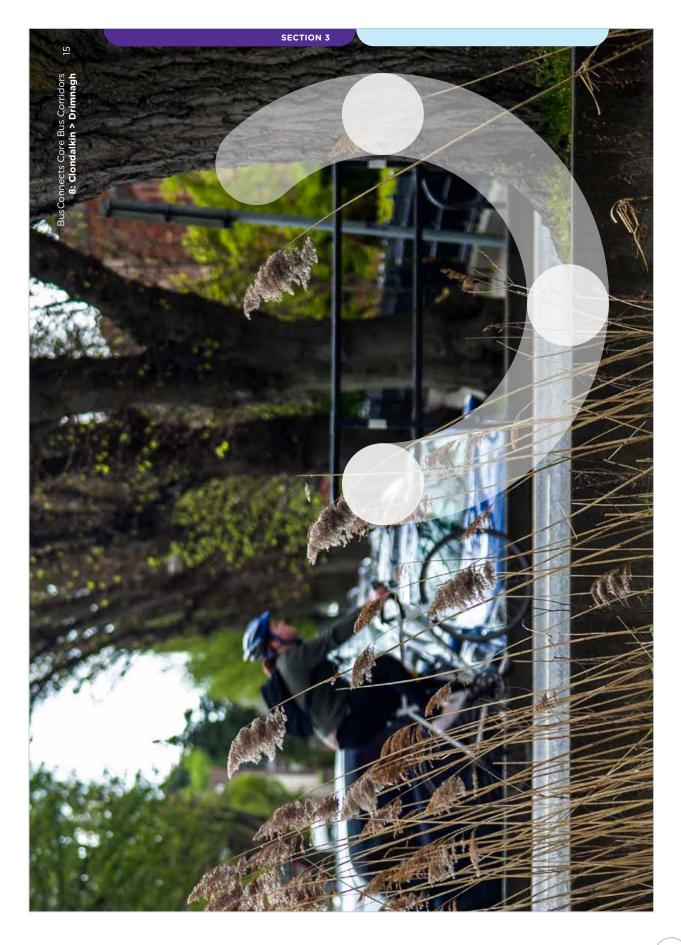

# 3.3.5 Urban Centre Improvements

important to use this opportunity to not only replace what is removed but to enhance the local areas. To do so, we will consult with the local We will look for areas along the busy corridors where it is possible to authorities on such urban centre improvements and collectively seek improve the existing local spaces and the existing landscaping. It is to create attractive local environments.

# 3.3.6 Road Works and Construction Sites

During the construction stages the construction sites will be localised very important to keep the traffic moving and ensuring local access residential nature of many of the roads. Traffic management will be and managed on a road by road basis. The size of each work site and the hours of working will have to take into consideration the for people and deliveries is always maintained.

16

# Core Bus Corridors Clondalkin to Drimnagh

There has been a lot of thinking and work on the best routes for bus corridors.

These are known as Emerging Preferred Routes.

One route goes from Clondalkin to Drimnagh.

This bus corridor will start on the New Nangor Road at the junction with Woodford Walk.

It will go along the New Nangor Road as far as the Naas Road.

The bus corridor will travel along the Naas Road to Walkinstown Avenue.

It will continue down Walkinstown Avenue on to the Long Mile Road.

At the Walkinstown Road, this bus corridor will join the Greenhills Core Bus Corridor.

Now, the bus journey from Clondalkin to Drimnagh takes over 20 minutes.

With the bus corridor, this journey will take around 14 minutes.

The route is 4 kilometres.

There will be new cycle lanes along this route.

We need to make changes along the route to make room for the bus corridor.

For example, changing road layouts, putting in more footpaths, taking down and replacing trees, making changes to some gardens.

You will find a map for this route and an information booklet at:

www.busconnects.ie

(Name & Address) Balle Atha Clieth 2, DOZ WT70 asim 3, DOJ W126 COLUMN BEREITS & Millimstovaltemport is Date: 9th November 2018 Ref: Re: BusConnects to City Centre Core Bus Corridor Project Dear Property Owner / Occupier, The National Transport Authority (NTA) has been tasked with delivering the BusConnects Dublin programme, which is a set of proposals to transform Dublin's bus system, so that journeys by bus will be fast, reliable, punctual, convenient and affordable. It will enable more people to travel by bus than ever before, providing an alternative to congested car journeys. From the perspective of public transport, congestion is a major problem. On the busiest bus routes, bus lanes are only in place for less than one third of the corridor. This means that for most of the journey, buses are competing for space with general traffic and so are also affected by the increasing levels of congestion. A key part of the BusConnects programme is the development of "Core Bus Corridors", effectively the delivery of continuous bus lanes, on the key bus routes across the city. Sixteen corridors are included in BusConnects Dublin. Initial work has been undertaken on these corridors to identify an Emerging Preferred Route for each corridor. The Emerging Preferred Route is the proposal which, subject to a public consultation process, is considered to offer the best solution to improve the bus and cycle network. The purpose of this letter is to inform you that the proposals contained in the Emerging Preferred Scheme for the to City Centre Core Bus Corridor  $\underline{\textbf{may}}$  impact on part of your property. An extract from a layout map showing an indicative layout of the scheme in the vicinity of your property is attached. The plan shows where the car lanes, bus lanes, cycle lanes and footpaths will be. Areas where land may be potentially impacted are marked with red dashed lines. Tableir court at wells Transportförfreland is to logituids econs agus tentrolal forgun photol do ci

VIIII sews. Transportformsland in for public frame

A complete public consultation document, which contains all of the relevant maps for this corridor, will be sent to you next week.

<u>We do wish to reiterate that these are proposals only which are not fixed or finalised</u>. They will be published in full shortly to get public feedback in relation to them. No decisions have been made to proceed with these proposals, and none would be taken until we have concluded the consultation process.

Any decision to proceed with this overall project would be subject to a statutory planning process, which would involve an application for planning consent to An Bord Pleanala. That planning application would not be made before 2020. If any garden portion or land was ultimately necessary to be acquired from your property, appropriate compensation would have to be paid in addition to the rebuilding of new garden walls, fences, gates and driveways, plus landscaping works to the residual area.

The NTA would welcome the opportunity to meet with you in relation to these proposals. That would give us the opportunity to discuss with you on a one-to-one basis, what this may mean for you and what the next steps will be over the coming months and years. If you wish to avail of this meeting please call **1800 303 653** to arrange a time and date at your earliest convenience.

Yours sincerely,

BusConnects Dublin,

National Transport Authority

BusConnects is a major investment programme to improve public transport in Dublin. It aims to overhaul the current bus system through a 10 year integrated programme of integrated actions to deliver a more efficient, reliable and better bus system for more people.

The core bus corridor project aims to deliver 230kms of dedicated bus lanes and 200kms of cycle tracks along 16 of the busiest corridors in Dublin. The National Transport Authority is now commencing a public consultation in relation to these proposals.

This public consultation for sixteen core bus corridors will take place over a **phased basis** starting from 14th November 2018 and will run until May 2019.

The public consultation for the first four corridors has now commenced and will end Friday 15th February 2019. We are now seeking submissions and observations for the following:

Clongriffin to City Centre

Blanchardstown to City Centre

Swords to City Centre

Lucan to City Centre

Details of the proposals for these **four corridors** are available for download on the website **www.busconnects.ie** or call Freefone 1800 303 653.

- Community Forum The NTA will establish a Community Forum for each corridor where there will be an opportunity for a representative from Residents' Associations, Community Groups, Public Representatives and Interested Groups to get informed and engaged during the public consultation process. Please email cbc@busconnects.ie to get involved.
- eries of Public Consultation m held in venues along these corridors. Details of these can also be found on the website and in local newspapers in the coming weeks.

Details of the other twelve corridors will be published for public review in early 2019. Below is a list of the corridors and the proposed public consultation phasing

Public Consultation Dates: Public Consultation Dates: Mid - January to End March 2019 Mid - February to End April 2019	
Liffey Valley to City Centre	Ballymun to City Centre

# **BusConnects Core Bus Corridor Phase 1 Fact Sheet:**

TRANSFORMING CITY BUS SERVICES

# **BusConnects Core Bus Corridor Project**

## **Public Consultation Key Facts**

### **Background**

- Population in the Dublin region is due to grow by 25% by 2040, bringing it to almost 1.55m.
- Bus is the proven solution and main form of public transport across Dublin with 67% of public transport journeys each day made by bus.
- Cars only account for 30% of travel into the city centre each day.
- Bus carries x3 and x4 the number of people who travel on Luas or Dart and commuter rail.
- Commuting to work by bicycle has increased by 43% since 2011.

## **Core Bus Corridors Project**

- 230kms of continuous bus priority and 200kms of cycle tracks along 16 of the busiest corridors in Dublin.
- Delivery of journey time savings of up to 40-50% on each corridor.
- On the four corridors unveiled today, annual passenger growth in Dublin Bus services has increased by up to 14% in the years 2015 to 2017.
- Yet bus lanes account for only in place for one-third of corridors.

### **Phase One Facts**

Route	No. of Properties Impacted	No. of on parking space being removed	No. of roadside trees being removed	Route length	Cycle lane length	Current bus journey time	BusConnects journey time	Future bus journey time without BusConnects
Clongriffin	120	31	100	10km	6km	Up to 65 mins	30-35 mins	85+ mins
Swords	110	101	170	12km	12km	Up to 71 mins	40 mins	80+ mins
Blanchardstown	100	87	200	8km	8km	Up to 65 mins	25-30 mins	80+ mins

Centre		City Centre	
Swords to City Centre	€100m to €150m	Lucan to City Centre	€80m to €120m

## **Mitigation Efforts**

- Where lands are being acquired, the NTA will ensure new landscaping and replanting of gardens, reinstatement of driveways and as well as providing compensation for the garden and driveway portion loss and disruption.
- Where private and public walls or fencing or removed, we will **rebuild and replace**.
- Where there is a loss of on-street parking and loading facilities, we will seek to provide, where feasible, alternative arrangements close by.
- Where trees are removed we will put in place a comprehensive replanting programme replacing more trees that we move. The programme will largely use mature or semi-mature ready-grown trees, and where it is feasible, plant them as close as possible to the original locations.
- We intend to create attractive local environments at key urban centres along the routes, with the provision of attractive landscaping, lighting, seating and other features.

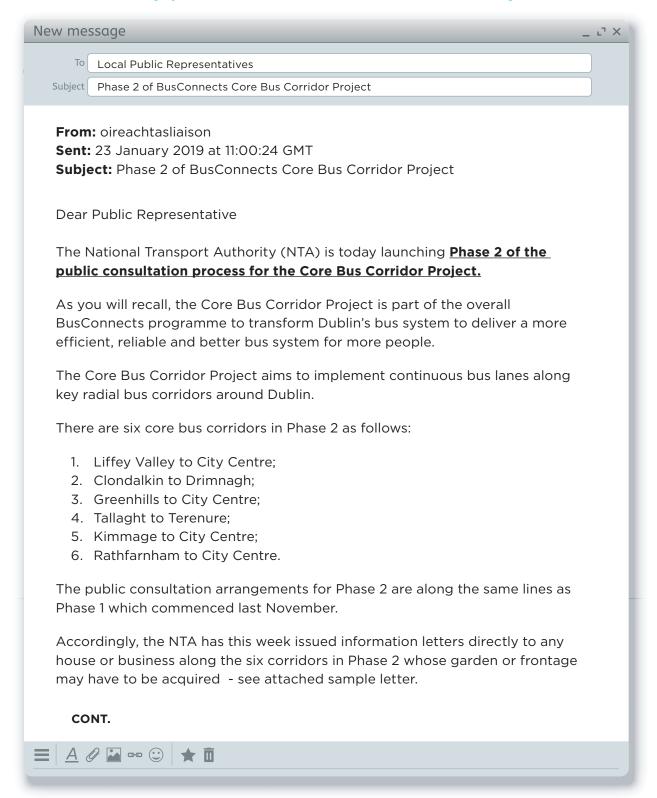

# **Process of Engagement**

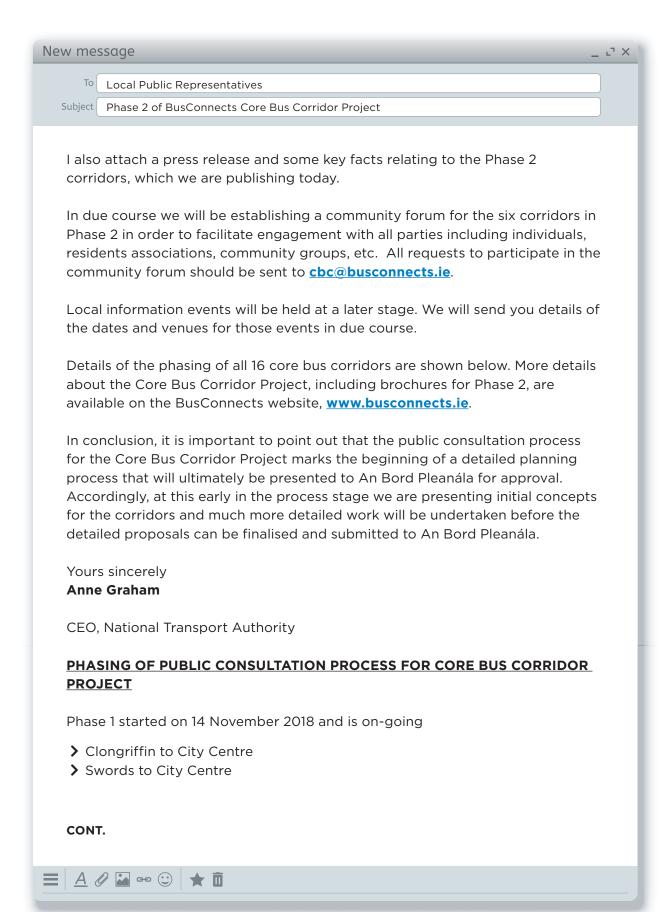

- The NTA believes a step-by-step process of engagement is the best approach to take in delivering the Core Bus Corridors project.
- All property owners potentially affected by today's announcement have been notified by post and a one-to-one meeting is being offered with each of those impacted.
- Today marks the beginning of a dialogue with those potentially impacted which will continue into 2019 and throughout the project.
- Planning approval from An Bord Pleanála will be required for this project and for the acquisition of garden portions. That planning application will only be made in 2020.

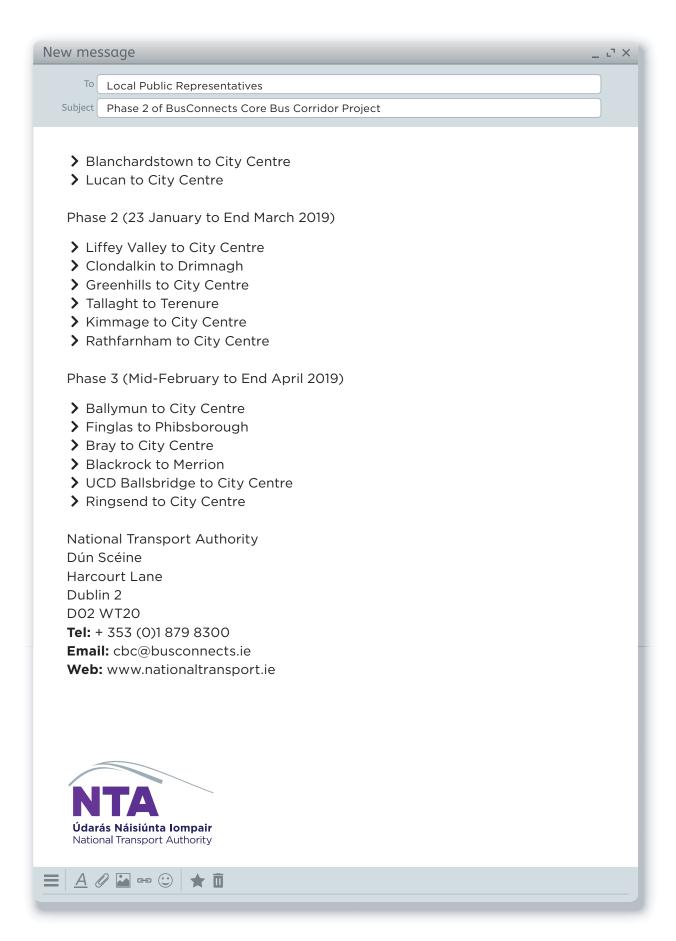

### CONT.

- The NTA will also establish a Community Forum for each corridor where there will be an
  opportunity for a representative from Residents' Associations, Community Groups, Public
  Representatives and Interested Groups to get informed and engaged during the public
  consultation process.
- A series of public consultation meetings will be held in venues along the four corridors details of which can be found on the BusConnects website.
- Written submissions and observations on the four corridors announced today may be made:
  - o Online at: <a href="https://www.busconnects.ie">www.busconnects.ie</a>;
  - Via post to: Core Bus Corridor Project, NTA, Dun Sceine, Harcourt Lane, Dublin 2, D02 WT20;
  - o By email to: cbc@busconnects.ie.

# Re: BusConnects to City Centre Core Bus Corridor Project

Dear Property Owner / Occupier,

The National Transport Authority (NTA) has been tasked with delivering the BusConnects Dublin programme, which is a set of proposals to transform Dublin's bus system, so that journeys by bus will be fast, reliable, punctual, convenient and affordable. It will enable more people to travel by bus than ever before, providing an alternative to congested car journeys.

From the perspective of public transport, congestion is a major problem. On the busiest bus routes, bus lanes are only in place for less than one third of the corridor. This means that for most of the journey, buses are competing for space with general traffic and so are also affected by the increasing levels of congestion.

A key part of the BusConnects programme is the development of "Core Bus Corridors", effectively the delivery of continuous bus lanes, on the key bus routes across the city. Sixteen corridors are included in BusConnects Dublin.

Initial work has been undertaken on these corridors to identify an Emerging Preferred Route for each corridor. The Emerging Preferred Route is the proposal which, subject to a public consultation process, is considered to offer the best solution to improve the bus and cycle network.

The purpose of this letter is to inform you that the proposals contained in the Emerging Preferred Scheme for the to City Centre Core Bus Corridor <u>may</u> impact on part of your property. An extract from a layout map showing an indicative layout of the scheme in the vicinity of your property is attached. The plan shows where the car lanes, bus lanes, cycle lanes and footpaths will be. Areas where land may be potentially impacted are marked with red dashed lines.

Fabrier count is we've Transport/oriestand in is larger or even ago: sentinis lengue photol do charterine.

Vol. even Transport/oriestand in the public transport continue of the receiver and services.

A complete public consultation document, which contains all of the relevant maps for this corridor, will be sent to you next week.

<u>We do wish to reiterate that these are proposals only which are not fixed or finalised</u>. They will be published in full shortly to get public feedback in relation to them. No decisions have been made to proceed with these proposals, and none would be taken until we have concluded the consultation process.

Any decision to proceed with this overall project would be subject to a statutory planning process, which would involve an application for planning consent to An Bord Pleanala. That planning application would not be made before 2020. If any garden portion or land was ultimately necessary to be acquired from your property, appropriate compensation would have to be paid in addition to the rebuilding of new garden walls, fences, gates and driveways, plus landscaping works to the residual area.

The NTA would welcome the opportunity to meet with you in relation to these proposals. That would give us the opportunity to discuss with you on a one-to-one basis, what this may mean for you and what the next steps will be over the coming months and years. If you wish to avail of this meeting please call **1800 303 653** to arrange a time and date at your earliest convenience.

Yours sincerely,

BusConnects Dublin,

National Transport Authority

### Press Release issued 23rd January 2019:

# PRESS RELEASE

# NTA LAUNCHES PUBLIC CONSULTATION ON SECOND PHASE OF THE CORE BUS CORRIDOR PROJECT

23rd January 2019 – The National Transport Authority has today announced details of the second phase of the BusConnects Core Bus Corridor project with the unveiling of a further six of the sixteen routes that are earmarked for development.

The BusConnects programme aims to transform Dublin's bus system, with the Core Bus Corridor project providing 230kms of dedicated bus lanes and 200km of cycle lanes on sixteen of the busiest bus corridors in and out of the city centre. This project is fundamental to addressing the congestion issues in the Dublin region with the population due to grow by 25% by 2040, bringing it to almost 1.55m.

The bus service is the main form of public transport across Dublin with 67% of public transport

journeys each day made by bus. The level of commuting to work by bicycle has also increased by 43% since 2011 and the need for better and safer cycling facilities will be provided through the rollout of the core bus corridor project.

The first phase of the public consultations commenced in November 2018 and is on-going. The latest public consultation for phase two is commencing today on the Emerging Preferred Routes for the following six corridors:

- **\rightarrow** Liffey Valley to the City Centre
- October 1 Clondalkin to Drimnagh
- Greenhills to the City Centre
- **Output** Tallaght to Terenure
- **Note:** Kimmage to the City Centre
- **Nathfarnham to the City Centre**

On the six corridors announced today, annual passenger growth in Dublin Bus services has increased by up to 19% in the period 2015 to 2018. However, the millions of passenger journeys taking place on each of these corridors are facing increasing congestion with delays being frequently experienced by commuters.

All property owners potentially affected by today's announcement have been notified by post with one-to-one meetings being offered in the coming weeks with those potentially impacted.

Phase Three of the Core Bus Corridors project will get underway in mid-February and will run until the end of April featuring the final six corridors: Ballymun to the City Centre; Finglas to Phibsborough; Bray to the City Centre; Blackrock to Merrion; UCD Ballsbridge to City Centre and Ringsend to the City Centre.

Anne Graham, CEO of the NTA said: "Today marks the second stage in a three-step process with details being unveiled of six additional Emerging Preferred Routes foreseen under the BusConnects Core Bus Corridor project. In recent days, we have notified the 665 property owners along these routes who may be potentially affected and offered one-to-one meetings to inform them of the proposals and listen to their feedback.

"We would encourage those who received the notification to get in contact with us and engage in the consultation process that runs until the 29th March. We want to hear from them to get their views on the proposals and the issues that they wish to see addressed.

"At the NTA, we are determined to deepen our engagement with

the communities along each of the identified corridors. That is why in addition to the meeting with potentially affected property owners we will also be organising public information events and Community Forums along each of the six corridors announced today.

"The Community Forums, in particular, will ensure a two-way dialogue with community leaders, residents' associations, special interest groups and public representatives. We are eager to listen to the concerns of all those affected, and we will ensure they are kept updated on the project as it progresses.

"We have been encouraged by the positive level of engagement the NTA has witnessed since the launch of the Core Bus Corridors project public consultation in November 2018 and we will examine all observations carefully over the coming weeks as we look to develop Final Preferred Routes.

"Although we are aware that a project of this scale will bring many challenges, the BusConnects Core Bus Corridor project is needed now more than ever. With the city due to expand by 25% by 2040, continuous bus priority and segregated cycle lanes will be required to meet the growing demand for fast, reliable, punctual and convenient bus journeys in and out of the city centre, and safe cycling facilities for the growing numbers of cyclists."

### **BusConnects Core Bus Corridor Phase 2 Fact Sheet:**

TRANSFORMING CITY BUS SERVICES

# BusConnects Core Bus Corridor Project - Phase Two Public Consultation Key Facts

### **Background**

- Population in the Dublin region is due to grow by 25% by 2040, bringing it to almost 1.55m.
- Bus is the proven solution and main form of public transport across Dublin with 67% of public transport journeys each day made by bus.
- Cars only account for 30% of travel into the city centre each day.
- Bus carries x3 and x4 the number of people who travel on Luas or Dart and commuter
- Commuting to work by bicycle has increased by 43% since 2011.
- The performance by Dublin Bus continues to be very strong and the company provided the largest number of passenger journeys in 2018 at over 140m. This represents an increase of almost 4m over 2017, with the company posting five straight years of passenger growth.

### **Core Bus Corridors Project**

- 230kms of continuous bus priority and 200kms of cycle tracks along 16 of the busiest corridors in Dublin.
- Delivery of journey time savings of up to 40-50% on each corridor.
- Of the next **six** corridors unveiled today, annual passenger growth in Dublin Bus services has increased by up to 15% in the years 2015 to 2017.
- Yet bus lanes account for only in place for one-third of corridors.

### **Phase Two Facts**

The public consultation for Phase Two has now commenced and submissions can be made until Friday  $29^{th}$  March 2019.

Route	No. Properties Impacted	No. Parking spaces being removed	No. roadside tress being removed	Route length	Cycle lane length	Current bus journey time	BusConnects journey time	Future bus journey time without Bus- Connects
Liffey Valley to City Centre	60	30	90	10kms	2kms	Up to 65 mins	30-35 mins	80 mins+
Clondalkin to Drimnagh	15	0	20	4kms	4.5kms	Up to 21 mins	14 mins	25 mins+
Greenhills to City Centre	220	20	50	11kms	5kms	Up to 80 mins	35-40 mins	100 mins+
Tallaght to Terenure	40	15	15	4kms	1.2kms	Up to 32 mins	10-12 mins	45 mins+
Kimmage to City Centre	75	65	70	4kms	1.5kms	Up to 45 mins	12-15 mins	55 mins+
Rathfarnham to City Centre	255	50	45	6kms	7kms	Up to 75 mins	25-30 mins	90 mins+

<sup>\*</sup>Dublin Bus passengers only. Other bus services also operate on these corridors.

### **Additional Notes:**

### **Phase One**

The public consultation for Phase One is still ongoing with submission closing date of Friday 15<sup>th</sup> February 2019. The Swords to City Centre core bus corridor closing date has been extended until Friday 1<sup>st</sup> March 2019. This is to allow time for submissions to include observations for the Santry alternative layout option which is now included in the Swords to City Centre corridor consultation.

Phase One – Core Bus Corridor Routes
Clongriffin to City Centre
Swords to City Centre
Blanchardstown to City Centre
Lucan to City Centre

### **Phase Three**

The final phase of the core bus corridor project public consultation will commence mid-February and run until the end of April 2019. The following table lists the core bus corridors for Phase Three.

Phase Three – Core Bus Corridor Routes
Ballymun to City Centre
Finglas to Phibsborough
Bray to City Centre
Blackrock to Merrion
UCD Ballsbridge to City Centre
Ringsend to City Centre

### **Mitigation Efforts**

 Where lands are being acquired, the NTA will ensure new landscaping and replanting of gardens, reinstatement of driveways as well as providing compensation for the garden and driveway portion loss and disruption.

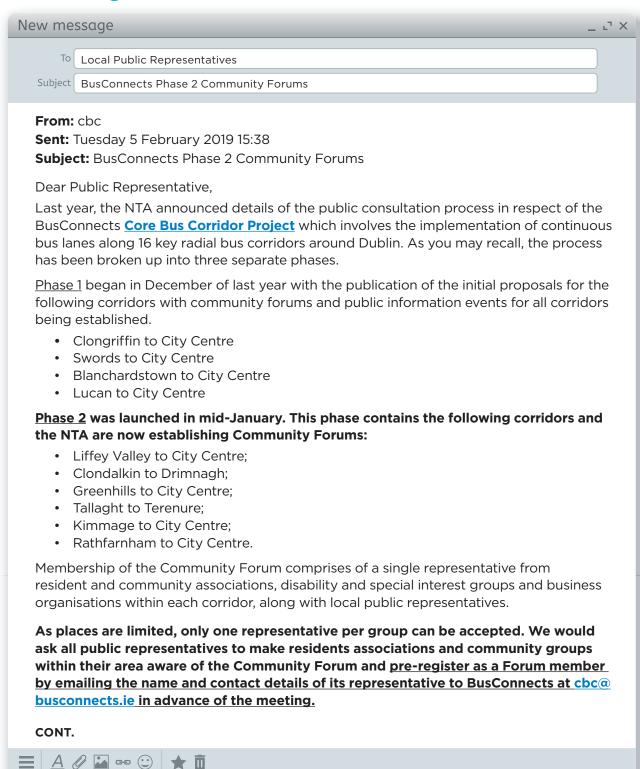

CONT.

- Where private and public walls or fencing are removed, we will **rebuild and replace**.
- Where there is a loss of on-street parking and loading facilities, we will seek to provide, where feasible, alternative arrangements close by.
- Where trees are removed we will put in place a comprehensive replanting
  programme replacing more trees than removed. The programme will largely use
  mature or semi-mature ready-grown trees, and where it is feasible, plant them as
  close as possible to the original locations.
- We intend to create attractive local environments at key urban centres along the routes, with the provision of attractive landscaping, lighting, seating and other features.

### **Process of Engagement**

- The NTA believes a step-by-step process of engagement is the best approach to take in delivering the Core Bus Corridors project.
- All property owners potentially affected by today's announcement have been notified by post and a one-to-one meeting is being offered with each of those impacted.
- Today marks the beginning of a dialogue with those potentially impacted which will continue during 2019 and throughout the project.
- Planning approval from An Bord Pleanála will be required for this project and for the acquisition of garden portions. That planning application will be made in 2020.
- The NTA has already established four Community Forums for Phase One corridors and will now commence the establishment for the six corridors in Phase Two. These forums are an opportunity for a representative from Residents' Associations, Community Groups, Public Representatives, disability groups and Interested Groups to get informed and engaged during the public consultation process. Interested groups can register by emailing cbc@busconnects.ie.
- A series of public consultation meetings will be held in venues along the six corridors – details of which can be found on the BusConnects website in the coming days.
- Written submissions and observations on the six corridors announced today may be made:
  - Online at: www.busconnects.ie;
  - Via post to: Core Bus Corridor Project, NTA, Dun Sceine, Harcourt Lane, Dublin 2, D02 WT20;
  - > By email to: <a href="mailto:cbc@busconnects.ie">cbc@busconnects.ie</a>.

Public Representative Correspondence regarding the public information events and the Community Forums for the Greenhills to City Centre Core Bus Corridor and the Clondalkin to Drimnagh Core Bus Corridor:

# New message

To Local Public Representatives

Subject BusConnects Phase 2 Community Forums

In addition the Community Forum meetings there will be general open public information events held along each corridor in the coming weeks. Details of those events will be announced next week.

### **Community Forum Meetings Dates Only:**

CORRIDOR	DATE	LOCATION	TIME
Rathfarnham to City Centre	Monday 11th February	Hilton Hotel, Charlemont Place, Dublin 2, D02 A893	18:30 - 20:00
Clondalkin to Drimnagh/ Greenhills to City Centre	Tuesday 12th February	Our Lady's Hall, Mourne Road, Drimnagh, D12, D12 DW68	18:30 - 20:00
Liffey Valley to City Centre	Wednesday 13th February	Hilton Hotel, Kilmainham Square, Inchicore, Dublin 8, D08 XAK3	18:30 - 20:00
Kimmage to City Centre	Monday 18th February	Hilton Hotel, Charlemont Place, Dublin 2, D02 A893	18:30 - 20:00
Tallaght to Terenure	Monday 25th February	St. Mary's Rugby Football Club, Templeville Road, Dublin 6W, D6W X652	18:30 - 20:00

Phase 3 will be launched in the coming weeks and we will be then publishing details of the final six corridors and establishing community forums for each corridor and hosting public information events.

- Ballymun to City Centre:
- Finglas to Phibsborough;
- Bray to City Centre;
- Blackrock to Merrion;
- UCD Ballsbridge to City Centre;
- · Ringsend to City Centre.

TRANSFORMING CITY BUS SERVICES

BusConnects is a major investment programme to improve public transport in Dublin. It aims to overhaul the current bus system through a 10 year integrated programme of integrated actions to deliver a more efficient, reliable and better bus system for more people.

The core bus corridor project aims to deliver 230kms of dedicated bus lanes and 200kms of cycle tracks along 16 of the busiest corridors in Dublin. The National Transport Authority has commenced a public consultation in relation to these proposals.

The public consultation for the sixteen core bus corridors will take place over a phased basis. Phase 1 commenced in November 2018 and will conclude Friday 15th February 2019. Details can be found on www.busconnects.ie.

The public consultation for **phase two** has now commenced and will end Friday 29th March 2019. We are now seeking submissions and observations for the following:

Liffey Valley to City Centre
Clondalkin to Drimnagh
Greenhills to City Centre
Tallaght to Terenure
Kimmage to City Centre
Rathfarnham to City Centre

Details of the proposals for these **6 corridors** are available for download on the website **www.busconnects.ie** or call Freefone 1800 303 653.

Community Forum - The NTA will establish a Community Forum for each corridor where there will be an opportunity for a representative from Residents' Associations, Community Groups, Public Representatives and Interested Groups to get informed and engaged during the public consultation process. Please email cbc@busconnects.ie to get involved.

**Public Consultation Information events** - A series of Public Consultation meetings will be held in venues along these corridors. Details of these will be available on the website and in local newspapers in the coming weeks.

Details of the remaining six corridors (Phase 3) will be published for public review in mid February. Below is a list of the corridors and the proposed public consultation phasing for phase 3.

### Public Consultation Dates: Mid - February to End April 2019

Ballymun to City Centre
Finglas to Phibsborough
Bray to City Centre
UCD Ballsbridge to City Centre
Blackrock to Merrion
Ringsend to City Centre

### Written submissions and observations on the six corridors may be made:

TRANSFORMING CITY BUS SERVICES

BusConnects is a major investment programme to improve public transport in Dublin. It aims to overhaul the current bus system through a 10 year integrated programme of integrated actions to deliver a more efficient, reliable and better bus system for more people.

16 of the busiest corridors in Dublin. The National Transport Authority has commenced a public consultation in relation to these proposals.

## Community Forum

The NTA is fully committed to working with all interested parties in the development of the Core Bus Corridors project. We want to keep everyone informed on the proposed bus corridors fully in the picture at all times. As such, we have established a Community Forum for each corridor.

Phase 2 Public Consultation has now commenced and we are calling for a single representative from resident and community associations, disability and special interest groups and business organisations on the corridors, along with public representatives. As places are limited, only one representative per group can be accepted.

Liffey Valley to City Centre, Clondalkin to Drimnagh, Greenhills to City Centre, Tallaght to Terenure, Kimmage to City Centre and Rathfarnham to City Centre.

The aim is to create two-way communication with local communities allowing information and feedback to be relayed clearly, quickly and accurately.

If you would like to nominate a representative for the phase 2 corridors above, please let us know by emailing cbc@busconnects.ie

Community Forums are being set up for each of the sixteen corridors. Phase 1, the first 4 routes is currently underway. Phase 3, the remaining 6 corridors is due to be published for Public Consultation shortly.

### General Information

Public Consultation is now live for these six corridors and will end Friday 28th March 2019 Written submissions and observations on the six corridors may be made:

Through the online form in the "Public Consultation" section of the Core Bus Corridor page on the website www.busconnects.ie

## BUS CONNECTS

#### TRANSFORMING CITY BUS SERVICES

#### **Topics discussed:**

- Submission & consultation process.
- Statutory process and timeline.
- Extent of time savings from project.
- Go Ahead Ireland.
- Junction layouts along Greenhills and potential for improvement.
- Interface between buses and cyclists.
- Continuity of cycling route.
- Pedestrian crossings.
- Tree removal and replanting programme.
- Streetscape improvements.
- · Loss of on-street parking.
- Car parking alternatives on Slaney Road.
- Interaction with bus services.
- Interaction with bus network redesign including services and routes.
- Level of segregation for cyclists.
- Number of properties impacted by scheme.
- Buffer space.
- Noise pollution.
- Traffic diversion at Walkinstown Avenue.
- Park and ride facilities.
- Proposed street layout.

#### TRANSFORMING CITY BUS SERVICES

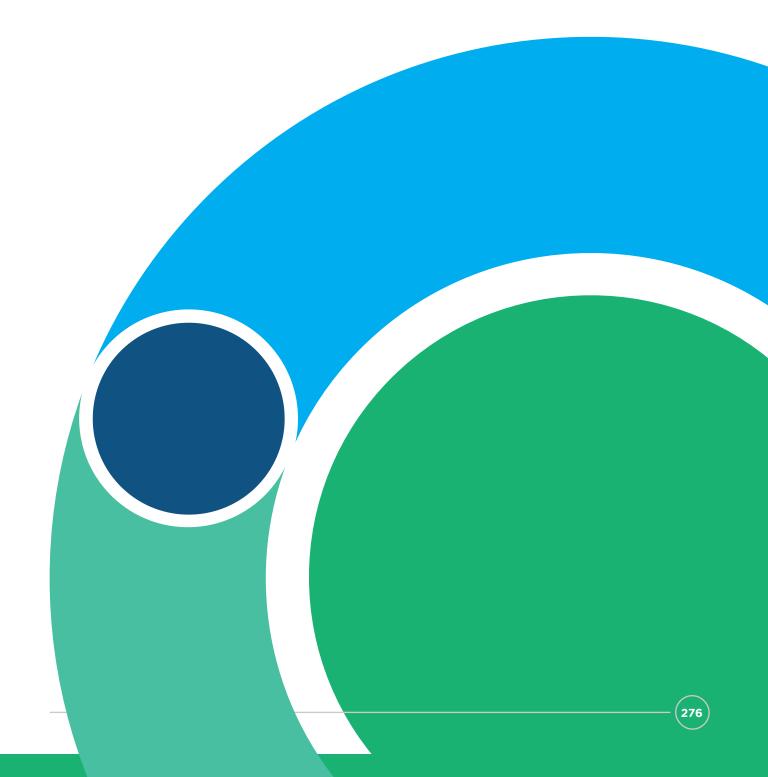

#### **Actions (NTA):**

- To refine the layouts for cycling at junctions along scheme.
- To review traffic movements.
- To review pedestrian crossings along Crumlin.

All actions for delivery as part of next design stage of project.

#### Date of next meeting:

Date to be confirmed. Registered forum members to be contacted in due course.

# Re: BusConnects to City Centre Core Bus Corridor Project

Dear Property Owner / Occupier,

The National Transport Authority (NTA) has been tasked with delivering the BusConnects Dublin programme, which is a set of proposals to transform Dublin's bus system, so that journeys by bus will be fast, reliable, punctual, convenient and affordable. It will enable more people to travel by bus than ever before, providing an alternative to congested car journeys.

From the perspective of public transport, congestion is a major problem. On the busiest bus routes, bus lanes are only in place for less than one third of the corridor. This means that for most of the journey, buses are competing for space with general traffic and so are also affected by the increasing levels of congestion.

A key part of the BusConnects programme is the development of "Core Bus Corridors", effectively the delivery of continuous bus lanes, on the key bus routes across the city. Sixteen corridors are included in BusConnects Dublin.

Initial work has been undertaken on these corridors to identify an Emerging Preferred Route for each corridor. The Emerging Preferred Route is the proposal which, subject to a public consultation process, is considered to offer the best solution to improve the bus and cycle network.

The purpose of this letter is to inform you that the proposals contained in the Emerging Preferred Scheme for the to City Centre Core Bus Corridor <u>may</u> impact on part of your property. An extract from a layout map showing an indicative layout of the scheme in the vicinity of your property is attached. The plan shows where the car lanes, bus lanes, cycle lanes and footpaths will be. Areas where land may be potentially impacted are marked with red dashed lines.

Tables count as we've Transport/orivelend in to logistic therein again territor temper photol do chartered Voll www.Transport/problemd in the public transport resource information and services. A complete public consultation document, which contains all of the relevant maps for this corridor, will be sent to you next week.

We do wish to reiterate that these are proposals only which are not fixed or finalised. They will be published in full shortly to get public feedback in relation to them. No decisions have been made to proceed with these proposals, and none would be taken until we have concluded the consultation process.

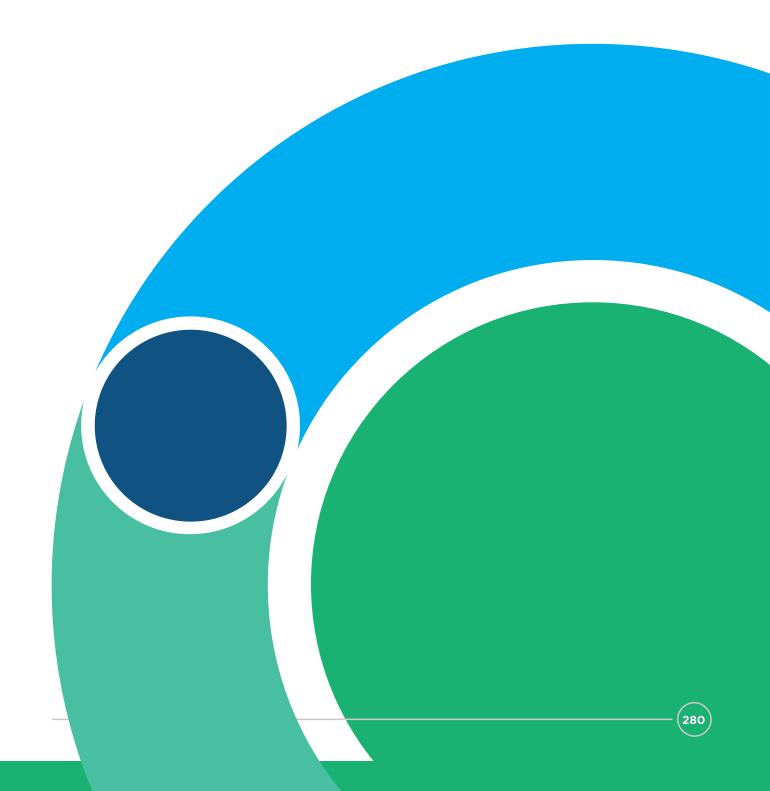

Any decision to proceed with this overall project would be subject to a statutory planning process, which would involve an application for planning consent to An Bord Pleanala. That planning application would not be made before 2020. If any garden portion or land was ultimately necessary to be acquired from your property, appropriate compensation would have to be paid in addition to the rebuilding of new garden walls, fences, gates and driveways, plus landscaping works to the residual area.

The NTA would welcome the opportunity to meet with you in relation to these proposals. That would give us the opportunity to discuss with you on a one-to-one basis, what this may mean for you and what the next steps will be over the coming months and years. If you wish to avail of this meeting please call **1800 303 653** to arrange a time and date at your earliest convenience.

Yours sincerely,

BusConnects Dublin,

**National Transport Authority**

# Emerging Preferred Route Option: First Round of Non-Statutory Public Consultation – 14th November 2018 – 31st May 2019

**3G** Press Release & Media Engagement

#### Press Release issued 23rd January 2019:

# PRESS RELEASE

# NTA LAUNCHES PUBLIC CONSULTATION ON SECOND PHASE OF THE CORE BUS CORRIDOR PROJECT

23rd January 2019 – The National Transport Authority has today announced details of the second phase of the BusConnects Core Bus Corridor project with the unveiling of a further six of the sixteen routes that are earmarked for development.

The BusConnects programme aims to transform Dublin's bus system, with the Core Bus Corridor project providing 230kms of dedicated bus lanes and 200km of cycle lanes on sixteen of the busiest bus corridors in and out of the city centre. This project is fundamental to addressing the congestion issues in the Dublin region with the population due to grow by 25% by 2040, bringing it to almost 1.55m.

The bus service is the main form of public transport across Dublin with 67% of public transport

journeys each day made by bus. The level of commuting to work by bicycle has also increased by 43% since 2011 and the need for better and safer cycling facilities will be provided through the rollout of the core bus corridor project.

The first phase of the public consultations commenced in November 2018 and is on-going. The latest public consultation for phase two is commencing today on the Emerging Preferred Routes for the following six corridors:

- Liffey Valley to the City Centre
- Octoon Clondalkin to Drimnagh
- Greenhills to the City Centre
- **Output** Tallaght to Terenure
- **Nimmage to the City Centre**
- Nathfarnham to the City Centre

On the six corridors announced today, annual passenger growth in Dublin Bus services has increased by up to 19% in the period 2015 to 2018. However, the millions of passenger journeys taking place on each of these corridors are facing increasing congestion with delays being frequently experienced by commuters.

All property owners potentially affected by today's announcement have been notified by post with one-to-one meetings being offered

in the coming weeks with those potentially impacted.

Phase Three of the Core Bus
Corridors project will get
underway in mid-February and
will run until the end of April
featuring the final six corridors:
Ballymun to the City Centre;
Finglas to Phibsborough; Bray
to the City Centre; Blackrock to
Merrion; UCD Ballsbridge to City
Centre and Ringsend to the City
Centre.

Anne Graham, CEO of the NTA said: "Today marks the second stage in a three-step process with details being unveiled of six additional Emerging Preferred Routes foreseen under the BusConnects Core Bus Corridor project. In recent days, we have notified the 665 property owners along these routes who may be potentially affected and offered one-to-one meetings to inform them of the proposals and listen to their feedback.

"We would encourage those who received the notification to get in contact with us and engage in the consultation process that runs until the 29th March. We want to hear from them to get their views on the proposals and the issues that they wish to see addressed.

"At the NTA, we are determined to deepen our engagement with

the communities along each of the identified corridors. That is why in addition to the meeting with potentially affected property owners we will also be organising public information events and Community Forums along each of the six corridors announced today.

"The Community Forums, in particular, will ensure a two-way dialogue with community leaders, residents' associations, special interest groups and public representatives. We are eager to listen to the concerns of all those affected, and we will ensure they are kept updated on the project as it progresses.

"We have been encouraged by the positive level of engagement the NTA has witnessed since the launch of the Core Bus Corridors project public consultation in November 2018 and we will examine all observations carefully over the coming weeks as we look to develop Final Preferred Routes.

"Although we are aware that a project of this scale will bring many challenges, the BusConnects Core Bus Corridor project is needed now more than ever. With the city due to expand by 25% by 2040, continuous bus priority and segregated cycle lanes will be required to meet the growing demand for fast, reliable, punctual and convenient bus journeys in and out of the city centre, and safe cycling facilities for the growing numbers of cyclists."

#### **BusConnects Core Bus Corridor Phase 2 Fact Sheet:**

TRANSFORMING CITY BUS SERVICES

# BusConnects Core Bus Corridor Project - Phase Two Public Consultation Key Facts

#### **Background**

- Population in the Dublin region is due to grow by 25% by 2040, bringing it to almost 1.55m.
- Bus is the proven solution and main form of public transport across Dublin with 67% of public transport journeys each day made by bus.
- Cars only account for 30% of travel into the city centre each day.
- Bus carries x3 and x4 the number of people who travel on Luas or Dart and commuter
- Commuting to work by bicycle has increased by 43% since 2011.
- The performance by Dublin Bus continues to be very strong and the company provided the largest number of passenger journeys in 2018 at over 140m. This represents an increase of almost 4m over 2017, with the company posting five straight years of passenger growth.

#### **Core Bus Corridors Project**

- 230kms of continuous bus priority and 200kms of cycle tracks along 16 of the busiest corridors in Dublin.
- Delivery of journey time savings of up to 40-50% on each corridor.
- Of the next six corridors unveiled today, annual passenger growth in Dublin Bus services has increased by up to 15% in the years 2015 to 2017.
- Yet bus lanes account for only in place for one-third of corridors.

#### **Phase Two Facts**

The public consultation for Phase Two has now commenced and submissions can be made until Friday 29<sup>th</sup> March 2019.

Route	No. Properties Impacted	No. Parking spaces being removed	No. roadside tress being removed	Route length	Cycle lane length	Current bus journey time	BusConnects journey time	Future bus journey time without Bus- Connects

<sup>\*</sup>Dublin Bus passengers only. Other bus services also operate on these corridors.

#### **Additional Notes:**

#### **Phase One**

The public consultation for Phase One is still ongoing with submission closing date of Friday 15<sup>th</sup> February 2019. The Swords to City Centre core bus corridor closing date has been extended until Friday 1<sup>st</sup> March 2019. This is to allow time for submissions to include observations for the Santry alternative layout option which is now included in the Swords to City Centre corridor consultation.

Phase One – Core Bus Corridor Routes
Clongriffin to City Centre
Swords to City Centre
Blanchardstown to City Centre
Lucan to City Centre

#### **Phase Three**

The final phase of the core bus corridor project public consultation will commence mid-February and run until the end of April 2019. The following table lists the core bus corridors for Phase Three.

Phase Three – Core Bus Corridor Routes
Ballymun to City Centre
Finglas to Phibsborough
Bray to City Centre
Blackrock to Merrion
UCD Ballsbridge to City Centre
Ringsend to City Centre

#### **Mitigation Efforts**

 Where lands are being acquired, the NTA will ensure new landscaping and replanting of gardens, reinstatement of driveways as well as providing compensation for the garden and driveway portion loss and disruption.

CONT.

- Where private and public walls or fencing are removed, we will rebuild and replace.
- Where there is a loss of on-street parking and loading facilities, we will seek to provide, where feasible, alternative arrangements close by.
- Where trees are removed we will put in place a comprehensive replanting
  programme replacing more trees than removed. The programme will largely use
  mature or semi-mature ready-grown trees, and where it is feasible, plant them as
  close as possible to the original locations.
- We intend to create attractive local environments at key urban centres along the routes, with the provision of attractive landscaping, lighting, seating and other features.

#### **Process of Engagement**

- The NTA believes a step-by-step process of engagement is the best approach to take in delivering the Core Bus Corridors project.
- All property owners potentially affected by today's announcement have been notified by post and a one-to-one meeting is being offered with each of those impacted.
- Today marks the beginning of a dialogue with those potentially impacted which will continue during 2019 and throughout the project.
- Planning approval from An Bord Pleanála will be required for this project and for the acquisition of garden portions. That planning application will be made in 2020.
- The NTA has already established four Community Forums for Phase One corridors and will now commence the establishment for the six corridors in Phase Two. These forums are an opportunity for a representative from Residents' Associations, Community Groups, Public Representatives, disability groups and Interested Groups to get informed and engaged during the public consultation process. Interested groups can register by emailing cbc@busconnects.ie.
- A series of public consultation meetings will be held in venues along the six corridors – details of which can be found on the BusConnects website in the coming days.
- Written submissions and observations on the six corridors announced today may be made:
  - Online at: www.busconnects.ie;
  - Via post to: Core Bus Corridor Project, NTA, Dun Sceine, Harcourt Lane, Dublin 2, D02 WT20;
  - > By email to: <a href="mailto:cbc@busconnects.ie">cbc@busconnects.ie</a>.

# Key Facts & Benefits - Greenhills to City Centre Core Bus Corridor:

# BUS CONVECTS

TRANSFORMING CITY BUS SERVICES

# **Core Bus Corridor Fact Sheet for Greenhills to City Centre**

#### **Key Facts:**

- Approximate number of properties that may be impacted: 220
- Approximate number of on-street parking spaces that may be removed: 20
- Approximate number of roadside trees that may be removed: 50
- Approximate route length: 11kms
- Approximate new cycle lane length: 5kms
- Current bus journey time: up to 80 mins
- BusConnects journey time: 35- 40 mins
- Future bus journey time without BusConnects: 100 mins +

#### **Benefits of this project:**

- Journey time savings the core bus corridor project will deliver journey time savings of up to 40-50% on each corridor;
- · Accessibility for all;
- · Better cycling facilities;
- Along each route improvements and enhancements will be made to pedestrian and local urban centres;
- Building a sustainable city and addressing climate change.

#### How to make a submission:

The project website www.busconnects.ie has a dedicated section for the Core Bus Corridor project. Users can access the site to find out more about the project and download copies of the key studies that have been carried out.

General queries can be directed to a dedicated freephone – 1800 303 653 or by email to cbc@busconnects.ie.

We are inviting submissions in relation to the proposals set out within the public consultation document. Please note that the public consultation for the first four corridors has commenced and will end on 29<sup>th</sup> March 2019.

Written submissions and observations may be made by:

#### **Media Plan:**

The first round of Non - Statutory Public Consultation was run over 3 phases from November 2018 to April 2019. We used press and digital.

National print titles were used to gain a broad reach. Regional print titles were used to support this and covered Dublin city and the Greater Dublin Area, including Wicklow.

For Digital, we included Social, Display and Near Targeting. NEAR activity allows us to target users on mobile devices within specific geo-fenced areas. For Near we targeted busy commuter routes, all major hospitals, shopping centres and universities/colleges in Dublin city.

#### Press Advertisement published in the Irish Times - 24 January 2019:

#### **Croí-Chonair Bhus BusConnects** Comhairliúchán Poiblí

Is mórchlár infheistíochta é BusConnects chun feabhas a chur ar an io poiblí i mBaile Átha Cliath. Is é is aidhm dó an córas bus reatha a leasú ó bhonn trí chlár comhtháite 10 mbliana de ghníomhartha comhtháite chun córas bus ar féidir brath air agus atá níos éifeachtúla agus níos fearr a chur ar fáil do níos mó

Is é is aidhm do thionscadal na croí-chonaire bus ná 230 km de lánaí bus tiomnaithe agus 200 km de raonta rothar a chur ar fáil ar 16 cinn de na conairí is gnóthaí i mBaile Átha Cliath. Tá tús curtha ag an Údarás Náisiúnta Iompair le comhairliúchán poiblí i ndáil leis na moltaí seo.

Reáchtálfar an comhairliúchán poiblí do na sé chroí-chonair bhus de réir a chéile Cuireadh tús le Céim 1 i Samhain 2018 agus tiocfaidh deireadh léi Dé hAoine, an 15 Feabhra 2019. Tá sonraí le fáil ar www.busconnects.ie

Tá tús curtha anois leis an gcomhairliúchán poiblí do **chéim a dó** agus tiocfaidh deireadh leis Dé hAoine, an 29 Márta 2019. Táimid ag lorg aighneachtaí agus tuairimí anois do na conairí seo a leanas:

Gleann na Life go dtí Lár na Cathrach
Cluain Dolcáin go dtí Droimeanach
Na Glaschnoic go dtí Lár na Cathrach
Tamhlacht go dtí Tír an Iúir
Camaigh go dtí Lár na Cathrach
Ráth Fearnáin go dtí Lár na Cathrach

busconnects.ie nó is féidir iad a fháil ach glaoch ar Shaorfhón 1800 303 653

Fóram Pobail - Bunóidh an tÚdarás Náisiúnta Iompair Fóram Pobail do gach conair áit a mbeidh deis ag ionadaí ó Chumainn Cónaitheoirí, ó Ghrúpaí Pobail agus ó Ghrúpaí Leasmhara, agus ag Ionadaithe Poiblí, eolas a fháil agus a bheith páirteach sa chomhairliúchán poiblí. Seol ríomhphost chuig cbc@busconnects.ie, le do thoil, chun bheith páirteach.

Imeachtaí eolais an chomhairliúcháin phoiblí - Mar chuid den chomhairliúchán poiblí, tionólfar sraith cruinnithe in ionaid ar na conairí seo. Beidh sonraí ina dtaobh sin ar fáil ar an suíomh gréasáin agus i nuachtáin áitiúla sna seachtainí atá

Foilseofar sonraí faoi na sé chonair eile (Céim 3) le haghaidh athbhreithniú ag an boobal i lár mhí Feabhra. Tá liosta de na conairí thíos mar aon leis na dátaí atá molta le haghaidh an chomhairliúcháin phoiblí do chéim 3.

#### Dátaí an Chomhairliúcháin Phoiblí: Lár mhí Feabhra go dtí deireadh mhí Aibreáin

Baile Munna go dtí Lár na Cathrach Fionnghlas go dtí Baile Phib

Bré go dtí Lár na Cathrach

COBÁC. Droichead na Dothra go dtí Lár na Cathrach

An Charraig Dhubh go dtí Muirfin

#### Is féidir aighneachtaí agus tuairimí i scríbhinn a chur isteach maidir leis na sé chonair:

Ar line: Trid an bhfoirm ar line sa chuid "Public Consultation" ar leathanach na Croí-Chonaire Bus ar an suíomh gréasáin www.busconnect.s.le

Trid an bpost chuig: Tionscadal na Croi-Chonaire Bus, An tÚdarás Náisiúnta Iompair, Dún Scéine, Lána Fhearchair, Baile Átha Cliath 2. D02 WT20

Tríd an ríomhphost chuig: cbc@busconnects.ie

#### **BusConnects Core Bus Corridor Public Consultation**

TRANSFORMING CITY BUS SERVICES

BusConnects is a major investment programme to improve public transport in Dublin. It aims to overhaul the current bus system through a 10 year integrated programme of integrated actions to deliver a more efficient, reliable and better bus system for more people.

The core bus corridor project aims to deliver 230kms of dedicated bus lanes and 200kms of cycle tracks along 16 of the busiest corridors in Dublin. The National Transport Authority has commenced a public consultation in relation to these proposals.

The public consultation for the sixteen core bus corridors will take place over a phased basis. Phase 1 commenced in November 2018 and will conclude Friday 15th February 2019. Details can be found on www.busconnects.ie.

The public consultation for **phase two** has now commenced and will end Friday 29th March 2019. We are now seeking submissions and observations for the

Liffey Valley to City Centre Clondalkin to Drimnagh Greenhills to City Centre Tallaght to Terenure Kimmage to City Centre Rathfarnham to City Centre Details of the proposals for these 6 corridors are available for download on the website www.busconnects.ie or call Freefone 1800 303 653.

Community Forum - The NTA will establish a Community Forum for each corridor where there will be an opportunity for a representative from Residents' Associations, Community Groups, Public Representatives and Interested Groups to get informed and engaged during the public consultation process. Please email cbc@busconnects.ie to get involved.

Public Consultation Information events - A series of Public Consultation meetings will be held in venues along these corridors. Details of these will be available or the website and in local newspapers in the coming weeks

Details of the remaining six corridors (Phase 3) will be published for public review in mid February. Below is a list of the corridors and the proposed public consultation phasing for phase 3.

#### Public Consultation Dates: Mid - February to End April 2019

Ballymun to City Centre Finglas to Phibsborough Bray to City Centre UCD Ballsbridge to City Centre Blackrock to Merrion Ringsend to City Centre

# Woman killed in M50 crash horror as car hits barrier

#### Robin Schiller, Amy Molloy and Luke Byrne

A WOMAN died after suffering catastrophic injuries in a motorway crash yesterday. The accident happened at around 11.30am at Junction 5 of the M50 northbound, near Finglas.

The woman, named locally

Tinglas.

The woman, named locally as Jackie Griffin, from Tallaght, who was in her 30s, was pronounced dead at the scene. An investigation is under way into

the tragedy. Gardai were forced to appeal to people to stop circulating images of the crash on social media out of respect for the vic-tim's family and others involved in the incident.

Officers also urged people to drive with care past the site. Four vehicles were involved, but it was an impact between two cars that caused the most serious damage, including the loss of life.

"As far as we are aware one."

car was in a collision with an-other car, which then collided with a crash barrier," a source told the *Herald* last night.

"The woman in that vehicle which hit the barrier suffered catastrophic injuries

"The other car then came to a stop a couple of hundred metres away."

metres away."
Tallaght councillor Louise
Dunne said: "My thoughts are

'I'm innocent', says Salmond

as he faces rape bid charges

with the victim's family and with her friends.
"It's an absolutely tragic and horrific thing for her family and her friends to have to go through."

Another family friend de-

Another family friend de-scribed Ms Griffin as "a gem of

a person".

The driver of the other car, a man in his 50s, was taken to Connolly Hospital, though he is not understood to have suffered

life-threatening injuries. A truck that was not involved in the initial impact also sustained damage, as did another

car. The road was closed into late last night as officers carried out investigations, with drivers hit by long delays during rush hour

### BUS CONNECTS

#### Croí-Chonair Bhus BusConnects Comhairliúchán Poiblí

Is mórchlár infheistíochta é BusConnects chun feabhas a chur ar an iompar poiblí i mBaile Átha Cliath. Is é is aidhm dó an córas bus reatha a leasú ó bhonn trí chlár comhtháite 10 mbilana de ghníomhartha comhtháite chun córas bus ar féidir brath air agus atá níos éifeachtúla agus níos fearr a chur ar fáil do níos mó daoine.

Isó se adalm do thionscadal na croi-chonaire bus ná 230 km de lánaí bus tiomnaithe agus 200 km de raonta rothar a chur ar fáil ar 16 cinn de na conairí is gnóthaí i mBaile Átha Cliath. Tá tús curtha ag an Údarás Náisiúnta lompair le comhairiúchán poibí i ndáil leis na moltaí seo.

Reáchtáifar an comhairliúchán poibí ído na sé chroí-chonair bhus de réir a chéile. Cuireadh tús le Céim 1 i Samhain 2018 agus tiocfaidh deireadh léi Dé hAoine, an 15 Feabhra 2019. Tá sonraí le fáil ar www.busconnects.ie

Tá tús curtha anois leis an gcomhairliúchán poiblí do **chéim a dó** agus tiocfaidh deireadh leis Dé hAoine, an 29 Márta 2019. Táimid ag lorg aighneachtaí agus tuairimí anois do na conairí seo a leanas:

Gleann na Life go dtí Lár na Cathrach

Cluain Dolcáin go dtí Droimeanach

Na Glaschnoic go dtí Lár na Cathrach

## CONNECTS

#### **BusConnects Core Bus Corridor Public Consultation**

BusConnects is a major investment programme to improve public transport in Dublin. It aims to overhaul the current bus system through a 10 year integrated programme of integrated actions to deliver a more efficient, reliable and better bus system for more people.

Detter bus system for more people.

The core bus corridor project aims to deliver 230kms of dedicated bus lanes and 200kms of cycle tracks along 16 of the busiest corridors in Dublin. The National Transport Authority has commenced a public consultation in relation to these proposals.

these proposals.

The public consultation for the sixteen core bus corridors will take place over a phased basis.

Phase I commenced in November 2018 and will conclude Friday 15th February 2019. Details can be found on www.busconnects.ie.

The public consultation for **phase two** has now commenced and will end Friday 29th March 2019. We are now seeking submissions and observations for the following:

Liffey Valley to City Centre

Greenhills to City Centre Tallaght to Terenure

Kimmage to City Centre

Rathfarnham to City Centre

Details of the proposals for these **6 corridors** are available for download on the website **www.busconnects.ie** or call Freefone 1800 303 653.

1800 303 653.

Community Forum - The NTA will establish a Community Forum for each corridor where there will be an opportunity for a representat from Residents' Associations, Community Groups, Public Representatives and Intereste Groups to get informed and engaged during the public consultation process.

Please email cbc@busconnects.ie to get involved.

Public Consultation Information events – A series of Public Consultation meetings will be held in venues along these corridors. Details of these will be available on the website and in local newspapers in the coming weeks.

Details of the remaining six corridors (Phase 3) will be published for public review in mid February. Below is a list of the corridors and the proposed public consultation phasing for phase 3.

#### Public Consultation Dates: Mid - February to End April 2019

Ballymun to City Centre Finglas to Phibsborough Bray to City Centre UCD Ballsbridge to City Centre Blackrock to Merrio

#### FORMER Scottish first minis-

Elisabeth O'Leary

FORMER Scottish first minister Alex Salmond has denied committing any crimes after he appeared in court charged with multiple sex offences including two counts of attempted rape. Scottish prosecutors said Salmond (64) had also been charged with nine counts of sexual assault, two counts of indecent assault and one of breach of the peace. "I am innocent of any criminality whatsoever," Salmond, a figurehead of Scotland's independence movement, told

reporters outside Edinburgh
Sheriff Court.

"I refute absolutely these allegations of criminality and I will defend myself to the utmost in court.

COMPLAINTS
"I would love to say a great deal more, but I've got to observe the rules of the court."

Salmond (inset) was released on bail, and it was not disclosed when further hearings would take place.

# Hutch relative held in armed swoop as gardai arrest three over Michael Keogh murder

#### and Ken Foy

AN under-threat Hutch family member has been arrested by detectives investigating the feud murder of Michael Keogh. Armed gardai swooped on a number of properties in Dublin yesterday morning and arrested three people – including a rel-ative, aged in his 40s, of Gerry The Monk Hutch, who has sur-vived two attempts on his life.

'The Monk' Hutch, who has survived two attempts on his life.

The suspected getaway driver
- also in his 40s - in the 2017
murder of Keogh was arrested
in prison, while his girlfriend,
aged in her 30s, was arrested in
the north inner city.

All three were being questioned about the murder of

All three were being ques-tioned about the murder of Keogh, but gardai suspect the actual shooter was slain gang-ster Jason 'Buda' Molyneux. Gardai believe Keogh (38) - a brother of jailed Kinahan hitman Jonathan Keogh - was targeted after becoming in-volved in a number of attacks

on associates of the Hutch mob

in the weeks before his murder.

The Hutch family member being quizzed over the killing has survived at least two at-

has survived at least two at-tempts on his life linked to the Hutch-Kinahan feud, which has so far claimed 19 lives. He was also previously ar-rested over the Regency Hotel murder of David Byrne three years ago this week, but has not been charged over the killing. The Michael Keogh murder,

His body was found in an un-derground car park at Sheridan Court by Dublin City Council workers.

Gardai quickly identified two notorious inner city criminals suspected of being the hitmen.

#### VOLATILE

VOLATILE
They included gangland mobster Molyneux, who was himself gunned down as part of the feud in January last year, and the dangerous north inner city mobster arrested by gardai vectorday. yesterday.

Molyneux is suspected of hav-Molyneux is suspected of having been joined on the murden job by a currently jailed armed robber from the north inner city whose home was searched by detectives on the day of the shooting.

He is before the courts on serious non-feud related charges

and is considered a "volatile and highly dangerous criminal" who has links to a number of Hutch gang associates.

A garda spokesman said yesterday: "Gardai investigating the murder of Michael Keogh on May 31, 2017, at Sheridan Court, Dublin 1, have arrested two men in their 40s and a woman in her 20c is Dublis trader.

30s in Dublin today.
"One man and one woman are detained under Section 50 of the Criminal Justice Act 2007 and the second man is detained under Section 4 of the Criminal Justice Act 1984.

"They are detained at Dublin

"They are detained at Dublin city centre garda stations."
Michael Keogh's brother Jonathan was jailed for life last year for the feud murder of The Monk's nephew Gareth Hutch in May 2016.
Gardai believe that incident also made Michael a huge target for the Hutch mob as Jonathan was on the run in the UK when the gang murdered his brother.
